### 6.14.15.74 EDCNT

Address offset: 0x664

IEEE 802.15.4 energy detect loop count

Number of iterations to perform an ED scan. If set to 0 one scan is performed, otherwise the specified number + 1 of ED scans will be performed and the max ED value tracked in EDSAMPLE.

   ## 6.14.15.81 SWITCHPATTERN

Address offset: 0x928

GPIO patterns to be used for each antenna

Maximum 8 GPIOs can be controlled. To secure correct signal levels on the pins, the pins must be configured in the GPIO peripheral as described in Pin configuration.

If, during switching, the total number of antenna slots is bigger than the number of written patterns, the RADIO loops back to the pattern used after the reference pattern.

A minimum number of 3 patterns must be written.

| A                | RW   | SWITCHPATTERN |          |       |    |    |    | Fill array of GPIO patterns for antenna control |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |

The GPIO pattern array size is 40 entries.

When written, bit n corresponds to the GPIO configured in [PSEL.DFEGPIO\[n\]](#).

When read, returns the number of GPIO patterns written since the last time the array was cleared. Use

[CLEARPATTERN](#) to clear the array.

### 6.14.15.82 CLEARPATTERN

  ## 6.14.16 Electrical specification

### 6.14.16.1 General radio characteristics

| Symbol                    | Description                      | Min. | Typ. | Max. | Units   |
|---------------------------|----------------------------------|------|------|------|---------|
| $f_{OP}$                  | Operating frequencies            | 2360 |      | 2500 | MHz     |
| $f_{PLL,CH,SP}$           | PLL channel spacing              |      | 1    |      | MHz     |
| $f_{DELTA,1M}$            | Frequency deviation @ 1 Mbps     |      | ±170 |      | kHz     |
| $f_{DELTA,BLE,1M}$        | Frequency deviation @ BLE 1 Mbps |      | ±250 |      | kHz     |
| $f_{DELTA,2M}$            | Frequency deviation @ 2 Mbps     |      | ±320 |      | kHz     |
| $f_{DELTA,BLE,2M}$        | Frequency deviation @ BLE 2 Mbps |      | ±500 |      | kHz     |
| $f_{skBPS}$               | On-the-air data rate             | 125  |      | 2000 | kbps    |
| $f_{chip, IEEE 802.15.4}$ | Chip rate in IEEE 802.15.4 mode  |      | 2000 |      | kchip/s |

### 6.14.16.2 Radio current consumption (transmitter)

| Symbol                 | Description                                        | Min. | Typ. | Max. | Units |
|------------------------|----------------------------------------------------|------|------|------|-------|
| $I_{TX,PLUS4dBm,DCDC}$ | TX only run current (DC/DC, 3 V) $P_{RF} = +4$ dBm |      | 7.0  |      | mA    |

| Symbol                   | Description                                       | Min. | Typ. | Max. | Units |
|--------------------------|---------------------------------------------------|------|------|------|-------|
| $I_{TX,PLUS4dBm}$        | TX only run current $P_{RF} = +4$ dBm             |      | 15.4 |      | mA    |
| $I_{TX,0dBm,DCDC}$       | TX only run current (DC/DC, 3 V) $P_{RF} = 0$ dBm |      | 4.6  |      | mA    |
| $I_{TX,0dBm}$            | TX only run current $P_{RF} = 0$ dBm              |      | 10.1 |      | mA    |
| $I_{TX,MINUS4dBm,DCDC}$  | TX only run current DC/DC, 3 V $P_{RF} = -4$ dBm  |      | 3.6  |      | mA    |
| $I_{TX,MINUS4dBm}$       | TX only run current $P_{RF} = -4$ dBm             |      | 7.8  |      | mA    |
| $I_{TX,MINUS8dBm,DCDC}$  | TX only run current DC/DC, 3 V $P_{RF} = -8$ dBm  |      | 3.2  |      | mA    |
| $I_{TX,MINUS8dBm}$       | TX only run current $P_{RF} = -8$ dBm             |      | 6.8  |      | mA    |
| $I_{TX,MINUS12dBm,DCDC}$ | TX only run current DC/DC, 3 V $P_{RF} = -12$ dBm |      | 2.9  |      | mA    |
| $I_{TX,MINUS12dBm}$      | TX only run current $P_{RF} = -12$ dBm            |      | 6.2  |      | mA    |
| $I_{TX,MINUS16dBm,DCDC}$ | TX only run current DC/DC, 3 V $P_{RF} = -16$ dBm |      | 2.7  |      | mA    |
| $I_{TX,MINUS16dBm}$      | TX only run current $P_{RF} = -16$ dBm            |      | 5.7  |      | mA    |
| $I_{TX,MINUS20dBm,DCDC}$ | TX only run current DC/DC, 3 V $P_{RF} = -20$ dBm |      | 2.5  |      | mA    |
| $I_{TX,MINUS20dBm}$      | TX only run current $P_{RF} = -20$ dBm            |      | 5.4  |      | mA    |
| $I_{TX,MINUS40dBm,DCDC}$ | TX only run current DC/DC, 3 V $P_{RF} = -40$ dBm |      | 2.1  |      | mA    |
| $I_{TX,MINUS40dBm}$      | TX only run current $P_{RF} = -40$ dBm            |      | 4.3  |      | mA    |
| $I_{START,TX,DCDC}$      | TX start-up current DC/DC, 3 V, $P_{RF} = 4$ dBm  | ..   | ..   | ..   | mA    |
| $I_{START,TX}$           | TX start-up current, $P_{RF} = 4$ dBm             | ..   | ..   | ..   | mA    |

### 6.14.16.3 Radio current consumption (Receiver)

| Symbol                 | Description                                        | Min. | Typ. | Max. | Units |
|------------------------|----------------------------------------------------|------|------|------|-------|
| $I_{RX,1M,DCDC}$       | RX only run current (DC/DC, 3 V) 1 Mbps/1 Mbps BLE |      | 4.6  |      | mA    |
| $I_{RX,1M}$            | RX only run current (LDO, 3 V) 1 Mbps/1 Mbps BLE   |      | 10.0 |      | mA    |
| $I_{RX,2M,DCDC}$       | RX only run current (DC/DC, 3 V) 2 Mbps/2 Mbps BLE |      | 5.2  |      | mA    |
| $I_{RX,2M}$            | RX only run current (LDO, 3 V) 2 Mbps/2 Mbps BLE   |      | 11.2 |      | mA    |
| $I_{START,RX,1M,DCDC}$ | RX start-up current (DC/DC, 3 V) 1 Mbps/1 Mbps BLE |      | 3.5  |      | mA    |
| $I_{START,RX,1M}$      | RX start-up current 1 Mbps/1 Mbps BLE              |      | 6.7  |      | mA    |

### 6.14.16.4 Transmitter specification

| Symbol                       | Description                                        | Min. | Typ. | Max. | Units |
|------------------------------|----------------------------------------------------|------|------|------|-------|
| $P_{RF}$                     | Maximum output power                               |      | 4.0  |      | dBm   |
| $P_{RFC}$                    | RF power control range                             |      | 24   |      | dB    |
| $P_{RFCR}$                   | RF power accuracy                                  |      |      | ±4   | dB    |
| $P_{RF1,1}$                  | 1st Adjacent Channel Transmit Power 1 MHz (1 Mbps) |      | -25  |      | dBc   |
| $P_{RF2,1}$                  | 2nd Adjacent Channel Transmit Power 2 MHz (1 Mbps) |      | -50  |      | dBc   |
| $P_{RF1,2}$                  | 1st Adjacent Channel Transmit Power 2 MHz (2 Mbps) |      | -25  |      | dBc   |

Figure 87: Sensitivity, 1 Mbps Bluetooth low energy mode, Regulator = LDO (typical values)

## 6.14.16.6 RX selectivity

RX selectivity with equal modulation on interfering signal<sup>18</sup>

<sup>14</sup> Typical sensitivity applies when ADDR0 is used for receiver address correlation. When ADDR[1...7] are used for receiver address correlation, the typical sensitivity for this mode is degraded by 3 dB.

<sup>15</sup> Typical sensitivity applies when ADDR0 is used for receiver address correlation. When ADDR[1..7] are used for receiver address correlation, the typical sensitivity for this mode is degraded by 3 dB.

<sup>16</sup> As defined in the *Bluetooth Core Specification v4.0 Volume 6: Core System Package (Low Energy Controller Volume)*

<sup>17</sup> Equivalent BER limit < 10E-04

<sup>18</sup> Desired signal level at PIN = -67 dBm. One interferer is used, having equal modulation as the desired signal. The input power of the interferer where the sensitivity equals BER = 0.1% is presented

| Symbol                                | Description                                              | Min. | Typ. | Max. | Units |

### 6.14.16.7 RX intermodulation

#### RX intermodulation<sup>19</sup>

<sup>19</sup> Desired signal level at PIN = -64 dBm. Two interferers with equal input power are used. The interferer closest in frequency is not modulated, the other interferer is modulated equal with the desired signal. The input power of the interferers where the sensitivity equals BER = 0.1% is presented.

| Symbol                      | Description                                                               | Min. | Typ. | Max. | Units |
|-----------------------------|---------------------------------------------------------------------------|------|------|------|-------|
| P <sub>IMD,5TH,1M</sub>     | IMD performance, 1 Mbps, 5th offset channel, packet length ≤ 37 bytes     |      | -33  |      | dBm   |
| P <sub>IMD,5TH,1M,BLE</sub> | IMD performance, BLE 1 Mbps, 5th offset channel, packet length ≤ 37 bytes |      | -30  |      | dBm   |
| P <sub>IMD,5TH,2M</sub>     | IMD performance, 2 Mbps, 5th offset channel, packet length ≤ 37 bytes     |      | -33  |      | dBm   |
| P <sub>IMD,5TH,2M,BLE</sub> | IMD performance, BLE 2 Mbps, 5th offset channel, packet length ≤ 37 bytes |      | -31  |      | dBm   |

### 6.14.16.8 Radio timing

| Symbol                               | Description                                                                                                              | Min. | Typ. | Max. | Units |
|--------------------------------------|--------------------------------------------------------------------------------------------------------------------------|------|------|------|-------|
| t <sub>TXEN,BLE,1M</sub>             | Time between TXEN task and READY event after channel FREQUENCY configured (1 Mbps BLE and 150 μs TIFS)                   | 140  |      | 140  | μs    |
| t <sub>TXEN,FAST,BLE,1M</sub>        | Time between TXEN task and READY event after channel FREQUENCY configured (1 Mbps BLE with fast ramp-up and 150 μs TIFS) | 40   |      | 40   | μs    |
| t <sub>TXDIS,BLE,1M</sub>            | When in TX, delay between DISABLE task and DISABLED event for MODE = Nrf_1Mbit and MODE = Ble_1Mbit                      | 6    |      | 6    | μs    |
| t <sub>RXEN,BLE,1M</sub>             | Time between the RXEN task and READY event after channel FREQUENCY configured (1 Mbps BLE)                               | 140  |      | 140  | μs    |
| t <sub>RXEN,FAST,BLE,1M</sub>        | Time between the RXEN task and READY event after channel FREQUENCY configured (1 Mbps BLE with fast ramp-up)             | 40   |      | 40   | μs    |
| t <sub>RXDIS,BLE,1M</sub>            | When in RX, delay between DISABLE task and DISABLED event for MODE = Nrf_1Mbit and MODE = Ble_1Mbit                      | 0    |      | 0    | μs    |
| t <sub>TXDIS,BLE,2M</sub>            | When in TX, delay between DISABLE task and DISABLED event for MODE = Nrf_2Mbit and MODE = Ble_2Mbit                      | 4    |      | 4    | μs    |
| t <sub>RXDIS,BLE,2M</sub>            | When in RX, delay between DISABLE task and DISABLED event for MODE = Nrf_2Mbit and MODE = Ble_2Mbit                      | 0    |      | 0    | μs    |
| t <sub>TXEN,IEEE 802.15.4</sub>      | Time between TXEN task and READY event after channel FREQUENCY configured (IEEE 802.15.4)                                | 130  |      | 130  | μs    |
| t <sub>TXEN,FAST,IEEE 802.15.4</sub> | Time between TXEN task and READY event after channel FREQUENCY configured (IEEE 802.15.4 with fast ramp-up)              | 40   |      | 40   | μs    |
| t <sub>TXDIS,IEEE 802.15.4</sub>     | When in TX, delay between DISABLE task and DISABLED event (IEEE 802.15.4)                                                | 21   |      | 21   | μs    |
| t <sub>RXEN,IEEE 802.15.4</sub>      | Time between the RXEN task and READY event after channel FREQUENCY configured (IEEE 802.15.4)                            | 130  |      | 130  | μs    |
| t <sub>RXEN,FAST,IEEE 802.15.4</sub> | Time between the RXEN task and READY event after channel FREQUENCY configured (IEEE 802.15.4 with fast ramp-up)          | 40   |      | 40   | μs    |
| t <sub>RXDIS,IEEE 802.15.4</sub>     | When in RX, delay between DISABLE task and DISABLED event (IEEE 802.15.4)                                                | 0.5  |      | 0.5  | μs    |
| t <sub>RX-to-TX turnaround</sub>     | Maximum TX-to-RX or RX-to-TX turnaround time in IEEE 802.15.4 mode                                                       |      | 40   |      | μs    |

### 6.14.16.9 Received signal strength indicator (RSSI) specifications

| Symbol                     | Description                                  | Min. | Typ. | Max. | Units |
|----------------------------|----------------------------------------------|------|------|------|-------|
| RSSI <sub>ACC</sub>        | RSSI accuracy valid range -90 to -20 dBm     |      | ±2   |      | dB    |
| RSSI <sub>RESOLUTION</sub> | RSSI resolution                              |      | 1    |      | dB    |
| RSSI <sub>PERIOD</sub>     | RSSI sampling time from RSSI_START task      |      | 0.25 |      | μs    |
| RSSI <sub>SETTLE</sub>     | RSSI settling time after signal level change |      | 15   |      | μs    |

### 6.14.16.10 Jitter

| Symbol          | Description                                                                                     | Min. | Typ. | Max. | Units |
|-----------------|-------------------------------------------------------------------------------------------------|------|------|------|-------|
| tDISABLEDJITTER | Jitter on DISABLED event relative to END event when shortcut between END and DISABLE is enabled |      | 0.25 |      | μs    |
| tREADYJITTER    | Jitter on READY event relative to TXEN and RXEN task                                            |      | 0.25 |      | μs    |

### 6.14.16.11 IEEE 802.15.4 energy detection constants

| Symbol       | Description                                                           | Min. | Typ. | Max. | Units |
|--------------|-----------------------------------------------------------------------|------|------|------|-------|
| ED_RSSISCALE | Scaling value when converting between hardware-reported value and dBm | 4    | 4    | 4    |       |
| ED_RSSIOFFS  | Offset value when converting between hardware-reported value and dBm  | -92  | -92  | -92  |       |

## 6.15 RNG — Random number generator

The Random number generator (RNG) generates true non-deterministic random numbers based on internal thermal noise that are suitable for cryptographic purposes. The RNG does not require a seed value.

Figure 88: Random number generator

The RNG is started by triggering the START task and stopped by triggering the STOP task. When started, new random numbers are generated continuously and written to the VALUE register when ready. A VALRDY event is generated for every new random number that is written to the VALUE register. This means that after a VALRDY event is generated the CPU has the time until the next VALRDY event to read out the random number from the VALUE register before it is overwritten by a new random number.

### 6.15.1 Bias correction

A bias correction algorithm is employed on the internal bit stream to remove any bias toward '1' or '0'. The bits are then queued into an eight-bit register for parallel readout from the VALUE register.

It is possible to enable bias correction in the CONFIG register. This will result in slower value generation, but will ensure a statistically uniform distribution of the random values.

### 6.15.2 Speed

The time needed to generate one random byte of data is unpredictable, and may vary from one byte to the next. This is especially true when bias correction is enabled.

## 6.15.3 Registers

| Base address | Peripheral | Instance | Description             | Configuration |
|--------------|------------|----------|-------------------------|---------------|
| 0x4000D000   | RNG        | RNG      | Random number generator |               |

Table 70: Instances

| Register      | Offset | Description                                                                     |
|---------------|--------|---------------------------------------------------------------------------------|
| TASKS_START   | 0x000  | Task starting the random number generator                                       |
| TASKS_STOP    | 0x004  | Task stopping the random number generator                                       |
| EVENTS_VALRDY | 0x100  | Event being generated for every new random number written to the VALUE register |
| SHORTS        | 0x200  | Shortcuts between local events and tasks                                        |
| INTENSET      | 0x304  | Enable interrupt                                                                |
| INTENCLR      | 0x308  | Disable interrupt                                                               |
| CONFIG        | 0x504  | Configuration register                                                          |
| VALUE         | 0x508  | Output random number                                                            |

Table 71: Register overview

### 6.15.3.1 TASKS\_START

Address offset: 0x000

Task starting the random number generator

|                  |            |             |       |                                                                                       |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

## 6.15.4 Electrical specification

### 6.15.4.1 RNG Electrical Specification

| Symbol                 | Description                                                                                                                            | Min. | Typ. | Max. | Units         |
|------------------------|----------------------------------------------------------------------------------------------------------------------------------------|------|------|------|---------------|
| $t_{\text{RNG,START}}$ | Time from setting the START task to generation begins.<br>This is a one-time delay on START signal and does not apply between samples. |      | 128  |      | $\mu\text{s}$ |
| $t_{\text{RNG,RAW}}$   | Run time per byte without bias correction. Uniform distribution of 0 and 1 is not guaranteed.                                          |      | 30   |      | $\mu\text{s}$ |
| $t_{\text{RNG,BC}}$    | Run time per byte with bias correction. Uniform distribution of 0 and 1 is guaranteed. Time to generate a byte cannot be guaranteed.   |      | 120  |      | $\mu\text{s}$ |

## 6.16 RTC — Real-time counter

The Real-time counter (RTC) module provides a generic, low power timer on the low-frequency clock source (LFCLK).

Figure 89: RTC block schematic

The RTC module features a 24-bit COUNTER, a 12-bit (1/X) prescaler, capture/compare registers, and a tick event generator for low power, tickless RTOS implementation.

### 6.16.1 Clock source

The RTC will run off the LFCLK.

The COUNTER resolution will therefore be 30.517  $\mu$ s. Depending on the source, the RTC is able to run while the HFCLK is OFF and PCLK16M is not available.

The software has to explicitly start LFCLK before using the RTC.

See [CLOCK — Clock control](#) on page 61 for more information about clock sources.

### 6.16.2 Resolution versus overflow and the PRESCALER

Counter increment frequency:

$$f_{\text{RTC}} [\text{kHz}] = 32.768 / (\text{PRESCALER} + 1)$$

The PRESCALER register is read/write when the RTC is stopped. The PRESCALER register is read-only once the RTC is STARTed. Writing to the PRESCALER register when the RTC is started has no effect.

The PRESCALER is restarted on START, CLEAR and TRIGOVFLW, that is, the prescaler value is latched to an internal register (<<PRESC>>) on these tasks.

Examples:

1. Desired COUNTER frequency 100 Hz (10 ms counter period)

$$\text{PRESCALER} = \text{round}(32.768 \text{ kHz} / 100 \text{ Hz}) - 1 = 327$$

$$f_{\text{RTC}} = 99.9 \text{ Hz}$$

$$10009.576 \mu\text{s counter period}$$

2. Desired COUNTER frequency 8 Hz (125 ms counter period)

$$\text{PRESCALER} = \text{round}(32.768 \text{ kHz} / 8 \text{ Hz}) - 1 = 4095$$

$$f_{\text{RTC}} = 8 \text{ Hz}$$

125 ms counter period

| Prescaler  | Counter resolution | Overflow       |
|------------|--------------------|----------------|
| 0          | 30.517 $\mu$ s     | 512 seconds    |
| $2^8-1$    | 7812.5 $\mu$ s     | 131072 seconds |
| $2^{12}-1$ | 125 ms             | 582.542 hours  |

Table 72: RTC resolution versus overflow

### 6.16.3 COUNTER register

The COUNTER increments on LFCLK when the internal PRESCALER register (<<PRESC>>) is 0x00. <<PRESC>> is reloaded from the PRESCALER register. If enabled, the TICK event occurs on each increment of the COUNTER. The TICK event is disabled by default.

Figure 90: Timing diagram - COUNTER\_PRESCALER\_0

Figure 91: Timing diagram - COUNTER\_PRESCALER\_1

### 6.16.4 Overflow features

The TRIGOVFLW task sets the COUNTER value to 0xFFFFF0 to allow SW test of the overflow condition.

OVRFLW occurs when COUNTER overflows from 0xFFFFF to 0.

**Important:** The OVRFLW event is disabled by default.

### 6.16.5 TICK event

The TICK event enables low power "tick-less" RTOS implementation as it optionally provides a regular interrupt source for a RTOS without the need to use the ARM<sup>®</sup> SysTick feature.

Using the RTC TICK event rather than the SysTick allows the CPU to be powered down while still keeping RTOS scheduling active.

**Important:** The TICK event is disabled by default.

### 6.16.6 Event control feature

To optimize RTC power consumption, events in the RTC can be individually disabled to prevent PCLK16M and HFCLK being requested when those events are triggered. This is managed using the EVTEN register.

For example, if the TICK event is not required for an application, this event should be disabled as it is frequently occurring and may increase power consumption if HFCLK otherwise could be powered down for long durations.

This means that the RTC implements a slightly different task and event system compared to the standard system described in [Peripheral interface](#) on page 74. The RTC task and event system is illustrated in [Tasks, events and interrupts in the RTC](#) on page 249.

Figure 92: Tasks, events and interrupts in the RTC

### 6.16.7 Compare feature

There are a number of Compare registers.

For more information, see [Registers](#) on page 254.

When setting a compare register, the following behavior of the RTC compare event should be noted:

- If a CC register value is 0 when a CLEAR task is set, this will not trigger a COMPARE event.

Figure 93: Timing diagram - COMPARE\_CLEAR

- If a CC register is N and the COUNTER value is N when the START task is set, this will not trigger a COMPARE event.

Figure 94: Timing diagram - COMPARE\_START

- COMPARE occurs when a CC register is N and the COUNTER value transitions from N-1 to N.

Figure 95: Timing diagram - COMPARE

- If the COUNTER is N, writing N+2 to a CC register is guaranteed to trigger a COMPARE event at N+2.

Figure 96: Timing diagram - COMPARE\_N+2

- If the COUNTER is N, writing N or N+1 to a CC register may not trigger a COMPARE event.

Figure 97: Timing diagram - COMPARE\_N+1

- If the COUNTER is N and the current CC register value is N+1 or N+2 when a new CC value is written, a match may trigger on the previous CC value before the new value takes effect. If the current CC value greater than N+2 when the new value is written, there will be no event due to the old value.

Figure 98: Timing diagram - COMPARE\_N-1

### 6.16.8 TASK and EVENT jitter/delay

Jitter or delay in the RTC is due to the peripheral clock being a low frequency clock (LFCLK) which is not synchronous to the faster PCLK16M.

Registers in the peripheral interface, part of the PCLK16M domain, have a set of mirrored registers in the LFCLK domain. For example, the COUNTER value accessible from the CPU is in the PCLK16M domain and is latched on read from an internal register called COUNTER in the LFCLK domain. COUNTER is the register which is actually modified each time the RTC ticks. These registers must be synchronised between clock domains (PCLK16M and LFCLK).

The following is a summary of the jitter introduced on tasks and events. Figures illustrating jitter follow.

| Task                            | Delay             |
|---------------------------------|-------------------|
| CLEAR, STOP, START, TRIGOVRFLOW | +15 to 46 $\mu$ s |

Table 73: RTC jitter magnitudes on tasks

| Operation/Function               | Jitter         |
|----------------------------------|----------------|
| START to COUNTER increment       | +/- 15 $\mu$ s |
| COMPARE to COMPARE <sup>20</sup> | +/- 62.5 ns    |

Table 74: RTC jitter magnitudes on events

1. CLEAR and STOP (and TRIGOVRFLOW; not shown) will be delayed as long as it takes for the peripheral to clock a falling edge and rising of the LFCLK. This is between 15.2585  $\mu$ s and 45.7755  $\mu$ s – rounded to 15  $\mu$ s and 46  $\mu$ s for the remainder of the section.

Figure 99: Timing diagram - DELAY\_CLEAR

Figure 100: Timing diagram - DELAY\_STOP

2. The START task will start the RTC. Assuming that the LFCLK was previously running and stable, the first increment of COUNTER (and instance of TICK event) will be typically after 30.5  $\mu$ s +/- 15  $\mu$ s. In some cases, in particular if the RTC is STARTed before the LFCLK is running, that timing can be up to ~250  $\mu$ s. The software should therefore wait for the first TICK if it has to make sure the RTC is running.

<sup>20</sup> Assumes RTC runs continuously between these events.

**Note:** 32.768 kHz clock jitter is additional to the numbers provided above.

Sending a TRIGOVFLW task sets the COUNTER to a value close to overflow. However, since the update of COUNTER relies on a stable LFCLK, sending this task while LFCLK is not running will start LFCLK, but the update will then be delayed by the same amount of time of up to ~250  $\mu$ s. The figures show the smallest and largest delays to on the START task which appears as a  $\pm 15 \mu$ s jitter on the first COUNTER increment.

Figure 101: Timing diagram - JITTER\_START-

Figure 102: Timing diagram - JITTER\_START+

### 6.16.9 Reading the COUNTER register

To read the COUNTER register, the internal <<COUNTER>> value is sampled.

To ensure that the <<COUNTER>> is safely sampled (considering an LFCLK transition may occur during a read), the CPU and core memory bus are halted for three cycles by lowering the core PREADY signal. The Read takes the CPU 2 cycles in addition resulting in the COUNTER register read taking a fixed five PCLK16M clock cycles.

Figure 103: Timing diagram - COUNTER\_READ

## 6.16.10 Registers

| Base address | Peripheral | Instance | Description         | Configuration                               |
|--------------|------------|----------|---------------------|---------------------------------------------|
| 0x4000B000   | RTC        | RTC0     | Real-time counter 0 | CC[0..2] implemented, CC[3] not implemented |
| 0x40011000   | RTC        | RTC1     | Real-time counter 1 | CC[0..3] implemented                        |

Table 75: Instances

| Register          | Offset | Description                                                                                       |
|-------------------|--------|---------------------------------------------------------------------------------------------------|
| TASKS_START       | 0x000  | Start RTC COUNTER                                                                                 |

### 6.16.11 Electrical specification

## 6.17 SAADC — Successive approximation analog-to-digital converter

The ADC is a differential successive approximation register (SAR) analog-to-digital converter.

Listed here are the main features of SAADC:

- 8/10/12-bit resolution, 14-bit resolution with oversampling
- Up to eight input channels
  - One channel per single-ended input and two channels per differential input
  - Scan mode can be configured with both single-ended channels and differential channels.
- Full scale input range (0 to VDD)
- Sampling triggered via a task from software or a PPI channel for full flexibility on sample frequency source from low power 32.768kHz RTC or more accurate 1/16MHz Timers
- One-shot conversion mode to sample a single channel
- Scan mode to sample a series of channels in sequence. Sample delay between channels is  $t_{ack} + t_{conv}$  which may vary between channels according to user configuration of  $t_{ack}$ .
- Support for direct sample transfer to RAM using EasyDMA
- Interrupts on single sample and full buffer events
- Samples stored as 16-bit 2's complement values for differential and single-ended sampling
- Continuous sampling without the need of an external timer
- Internal resistor string
- Limit checking on the fly

### 6.17.1 Shared resources

The ADC can coexist with COMP and other peripherals using one of AIN0–AIN7, provided these are assigned to different pins.

It is not recommended to select the same analog input pin for both modules.

### 6.17.2 Overview

The ADC supports up to eight external analog input channels, depending on package variant. It can be operated in a one-shot mode with sampling under software control, or a continuous conversion mode with a programmable sampling rate.

The analog inputs can be configured as eight single-ended inputs, four differential inputs or a combination of these. Each channel can be configured to select AIN0 to AIN7 pins, or the VDD pin. Channels can be

sampled individually in one-shot or continuous sampling modes, or, using scan mode, multiple channels can be sampled in sequence. Channels can also be oversampled to improve noise performance.

Figure 104: Simplified ADC block diagram

Internally, the ADC is always a differential analog-to-digital converter, but by default it is configured with single-ended input in the MODE field of the CH[n].CONFIG register. In single-ended mode, the negative input will be shorted to ground internally.

The assumption in single-ended mode is that the internal ground of the ADC is the same as the external ground that the measured voltage is referred to. The ADC is thus sensitive to ground bounce on the PCB in single-ended mode. If this is a concern we recommend using differential measurement.

### 6.17.3 Digital output

The output result of the ADC depends on the settings in the CH[n].CONFIG and RESOLUTION registers as follows:

$$\text{RESULT} = [V(P) - V(N)] * \text{GAIN}/\text{REFERENCE} * 2^{(\text{RESOLUTION} - m)}$$

where

**V(P)**

is the voltage at input P

**V(N)**

is the voltage at input N

**GAIN**

is the selected gain setting

**REFERENCE**

is the selected reference voltage

and  $m=0$  if CONFIG.MODE=SE, or  $m=1$  if CONFIG.MODE=Diff.

The result generated by the ADC will deviate from the expected due to DC errors like offset, gain, differential non-linearity (DNL), and integral non-linearity (INL). See [Electrical specification](#) for details on these parameters. The result can also vary due to AC errors like non-linearities in the GAIN block, settling errors

due to high source impedance and sampling jitter. For battery measurement the DC errors are most noticeable.

The ADC has a wide selection of gains controlled in the GAIN field of the CH[n].CONFIG register. If CH[n].CONFIG.REFSEL=0, the input range of the ADC core is nominally  $\pm 0.6$  V differential and the input must be scaled accordingly.

The ADC has a temperature dependent offset. If the ADC is to operate over a large temperature range, we recommend running CALIBRATEOFFSET at regular intervals, a CALIBRATEDONE event will be fired when the calibration is complete

### 6.17.4 Analog inputs and channels

Up to eight analog input channels, CH[n](n=0..7), can be configured.

See [Shared resources](#) on page 259 for shared input with comparators.

Any one of the available channels can be enabled for the ADC to operate in one-shot mode. If more than one CH[n] is configured, the ADC enters scan mode.

An analog input is selected as a positive converter input if CH[n].PSELP is set, setting CH[n].PSELP also enables the particular channel.

An analog input is selected as a negative converter input if CH[n].PSELN is set. The CH[n].PSELN register will have no effect unless differential mode is enabled, see MODE field in CH[n].CONFIG register.

If more than one of the CH[n].PSELP registers is set, the device enters scan mode. Input selections in scan mode are controlled by the CH[n].PSELP and CH[n].PSELN registers, where CH[n].PSELN is only used if the particular scan channel is specified as differential, see MODE field in CH[n].CONFIG register.

**Important:** Channels selected for COMP cannot be used at the same time for ADC sampling, though channels not selected for use by these blocks can be used by the ADC.

| Channel input | Source      | Connectivity |
|---------------|-------------|--------------|
| CH[n].PSELP   | AIN0...AIN7 | Yes(any)     |
| CH[n].PSELP   | VDD         | Yes          |
| CH[n].PSELN   | AIN0...AIN7 | Yes(any)     |
| CH[n].PSELN   | VDD         | Yes          |

Table 77: Legal connectivity CH[n] vs. analog input

### 6.17.5 Operation modes

The ADC input configuration supports one-shot mode, continuous mode and scan mode.

Scan mode and oversampling cannot be combined.

#### 6.17.5.1 One-shot mode

One-shot operation is configured by enabling only one of the available channels defined by CH[n].PSELP, CH[n].PSELN, and CH[n].CONFIG registers.

Upon a SAMPLE task, the ADC starts to sample the input voltage. The CH[n].CONFIG.TACQ controls the acquisition time.

A DONE event signals that one sample has been taken.

In this mode, the RESULTDONE event has the same meaning as DONE when no oversampling takes place. Note that both events may occur before the actual value has been transferred into RAM by EasyDMA. For more information, see [EasyDMA](#) on page 263.

### 6.17.5.2 Continuous mode

Continuous sampling can be achieved by using the internal timer in the ADC, or triggering the SAMPLE task from one of the general purpose timers through the PPI.

Care shall be taken to ensure that the sample rate fulfils the following criteria, depending on how many channels are active:

$$f_{\text{SAMPLE}} < 1 / [t_{\text{ACQ}} + t_{\text{conv}}]$$

The SAMPLERATE register can be used as a local timer instead of triggering individual SAMPLE tasks. When SAMPLERATE.MODE is set to Timers, it is sufficient to trigger SAMPLE task only once in order to start the SAADC and triggering the STOP task will stop sampling. The SAMPLERATE.CC field controls the sample rate.

The SAMPLERATE timer mode cannot be combined with SCAN mode, and only one channel can be enabled in this mode.

A DONE event signals that one sample has been taken.

In this mode, the RESULTDONE event has the same meaning as DONE when no oversampling takes place. Note that both events may occur before the actual value has been transferred into RAM by EasyDMA.

### 6.17.5.3 Oversampling

An accumulator in the ADC can be used to average noise on the analog input. In general, oversampling improves the signal-to-noise ratio (SNR). Oversampling, however, does not improve the integral non-linearity (INL), or differential non-linearity (DNL).

Oversampling and scan should not be combined, since oversampling and scan will average over input channels.

The accumulator is controlled in the OVERSAMPLE register. The SAMPLE task must be set  $2^{\text{OVERSAMPLE}}$  number of times before the result is written to RAM. This can be achieved by:

- Configuring a fixed sampling rate using the local timer or a general purpose timer and PPI to trigger a SAMPLE task
- Triggering SAMPLE  $2^{\text{OVERSAMPLE}}$  times from software
- Enabling BURST mode

CH[n].CONFIG.BURST can be enabled to avoid setting SAMPLE task  $2^{\text{OVERSAMPLE}}$  times. With BURST = 1 the ADC will sample the input  $2^{\text{OVERSAMPLE}}$  times as fast as it can (actual timing:  $<(t_{\text{ACQ}} + t_{\text{CONV}}) \times 2^{\text{OVERSAMPLE}}$ ). Thus, for the user it will just appear like the conversion took a bit longer time, but other than that, it is similar to one-shot mode. Scan mode can be combined with BURST=1, if burst is enabled on all channels.

A DONE event signals that one sample has been taken.

In this mode, the RESULTDONE event signals that enough conversions have taken place for an oversampled result to get transferred into RAM. Note that both events may occur before the actual value has been transferred into RAM by EasyDMA.

### 6.17.5.4 Scan mode

A channel is considered enabled if CH[n].PSEL is set. If more than one channel, CH[n], is enabled, the ADC enters scan mode.

In scan mode, one SAMPLE task will trigger one conversion per enabled channel. The time it takes to sample all channels is:

$$\text{Total time} < \text{Sum}(\text{CH}[x].t_{\text{ACQ}} + t_{\text{CONV}}), x=0..\text{enabled channels}$$

A DONE event signals that one sample has been taken.

In this mode, the RESULTDONE event signals has the same meaning as DONE when no oversampling takes place. Note that both events may occur before the actual values have been transferred into RAM by EasyDMA.

[Example of RAM placement \(even RESULT.MAXCNT\), channels 1, 2 and 5 enabled](#) on page 263 provides an example of results placement in Data RAM, with an even RESULT.MAXCNT. In this example, channels 1, 2 and 5 are enabled, all others are disabled.

|                                    | 31                           | 16 | 15 | 0 |
|------------------------------------|------------------------------|----|----|---|
| RESULT.PTR                         | CH[2] 1 <sup>st</sup> result |    |    |   |
| RESULT.PTR + 4                     | CH[1] 2 <sup>nd</sup> result |    |    |   |
| RESULT.PTR + 8                     | CH[5] 2 <sup>nd</sup> result |    |    |   |
|                                    | (...)                        |    |    |   |
| RESULT.PTR + 2*(RESULT.MAXCNT - 2) | CH[5] last result            |    |    |   |

Figure 105: Example of RAM placement (even RESULT.MAXCNT), channels 1, 2 and 5 enabled

[Example of RAM placement \(odd RESULT.MAXCNT\), channels 1, 2 and 5 enabled](#) on page 263 provides an example of results placement in Data RAM, with an odd RESULT.MAXCNT. In this example, channels 1, 2 and 5 are enabled, all others are disabled. The last 32-bit word is populated only with one 16-bit result.

|                                    | 31                           | 16 | 15 | 0 |
|------------------------------------|------------------------------|----|----|---|
| RESULT.PTR                         | CH[2] 1 <sup>st</sup> result |    |    |   |
| RESULT.PTR + 4                     | CH[1] 2 <sup>nd</sup> result |    |    |   |
| RESULT.PTR + 8                     | CH[5] 2 <sup>nd</sup> result |    |    |   |
|                                    | (...)                        |    |    |   |
| RESULT.PTR + 2*(RESULT.MAXCNT - 1) | CH[5] last result            |    |    |   |

Figure 106: Example of RAM placement (odd RESULT.MAXCNT), channels 1, 2 and 5 enabled

### 6.17.6 EasyDMA

After configuring RESULT.PTR and RESULT.MAXCNT, the ADC resources are started by triggering the START task. The ADC is using EasyDMA to store results in a Result buffer in RAM.

The Result buffer is located at the address specified in the RESULT.PTR register. The RESULT.PTR register is double-buffered and it can be updated and prepared for the next START task immediately after the STARTED event is generated. The size of the Result buffer is specified in the RESULT.MAXCNT register and the ADC will generate an END event when it has filled up the Result buffer, see [ADC](#) on page 264. Results are stored in little-endian byte order in Data RAM. Every sample will be sign extended to 16 bit before stored in the Result buffer.

The ADC is stopped by triggering the STOP task. The STOP task will terminate an ongoing sampling. The ADC will generate a STOPPED event when it has stopped. If the ADC is already stopped when the STOP task is triggered, the STOPPED event will still be generated.

Figure 107: ADC

If the RESULT.PTR is not pointing to the Data RAM region, an EasyDMA transfer may result in a HardFault or RAM corruption. See [Memory](#) on page 16 for more information about the different memory regions.

The EasyDMA will have finished accessing the RAM when the END or STOPPED event has been generated.

The RESULT.AMOUNT register can be read following an END event or a STOPPED event to see how many results have been transferred to the Result buffer in RAM since the START task was triggered.

In scan mode, SAMPLE tasks can be triggered once the START task is triggered. The END event is generated when the number of samples transferred to memory reaches the value specified by RESULT.MAXCNT. After an END event, the START task needs to be triggered again before new samples can be taken. Also make sure that the size of the Result buffer is large enough to have space for minimum one result from each of the enabled channels, by specifying RESULT.MAXCNT >= number of channels enabled. For more information about the scan mode, see [Scan mode](#) on page 262.

### 6.17.7 Resistor ladder

The ADC has an internal resistor string for positive and negative input.

See [Resistor ladder for positive input \(negative input is equivalent, using RESN instead of RESP\)](#) on page 265. The resistors are controlled in the CH[n].CONFIG.RESP and CH[n].CONFIG.RESN registers.

Figure 108: Resistor ladder for positive input (negative input is equivalent, using RESN instead of RESP)

### 6.17.8 Reference

The ADC can use two different references, controlled in the REFSEL field of the CH[n].CONFIG register.

These are:

- Internal reference
- VDD as reference

The internal reference results in an input range of  $\pm 0.6$  V on the ADC core. VDD as reference results in an input range of  $\pm VDD/4$  on the ADC core. The gain block can be used to change the effective input range of the ADC.

$$\text{Input range} = (\pm 0.6 \text{ V or } \pm VDD/4) / \text{Gain}$$

For example, choosing VDD as reference, single ended input (grounded negative input), and a gain of 1/4 the input range will be:

$$\text{Input range} = (VDD/4) / (1/4) = VDD$$

With internal reference, single ended input (grounded negative input), and a gain of 1/6 the input range will be:

$$\text{Input range} = (0.6 \text{ V}) / (1/6) = 3.6 \text{ V}$$

The AIN0-AIN7 inputs cannot exceed VDD, or be lower than VSS.

### 6.17.9 Acquisition time

To sample the input voltage, the ADC connects a capacitor to the input.

For illustration, see [Simplified ADC sample network](#) on page 266. The acquisition time indicates how long the capacitor is connected, see TACQ field in CH[n].CONFIG register. The required acquisition time depends on the source ( $R_{\text{source}}$ ) resistance. For high source resistance the acquisition time should be increased, see [Acquisition time](#) on page 266.

Figure 109: Simplified ADC sample network

| TACQ [ $\mu$ s] | Maximum source resistance [kOhm] |
|-----------------|----------------------------------|
| 3               | 10                               |
| 5               | 40                               |
| 10              | 100                              |
| 15              | 200                              |
| 20              | 400                              |
| 40              | 800                              |

Table 78: Acquisition time

### 6.17.10 Limits event monitoring

A channel can be event monitored by configuring limit register CH[n].LIMIT.

If the conversion result is higher than the defined high limit, or lower than the defined low limit, the appropriate event will get fired.

Figure 110: Example of limits monitoring on channel 'n'

Note that when setting the limits, CH[n].LIMIT.HIGH shall always be higher than or equal to CH[n].LIMIT.LOW. In other words, an event can be fired only when the input signal has been sampled outside of the defined limits. It is not possible to fire an event when the input signal is inside a defined range by swapping high and low limits.

The comparison to limits always takes place, there is no need to enable it. If comparison is not required on a channel, the software shall simply ignore the related events. In that situation, the value of the limits registers is irrelevant, so it does not matter if CH[n].LIMIT.LOW is lower than CH[n].LIMIT.HIGH or not.

## 6.17.11 Registers

| Base address | Peripheral | Instance | Description                 | Configuration |
|--------------|------------|----------|-----------------------------|---------------|
| 0x40007000   | SAADC      | SAADC    | Analog-to-digital converter |               |

Table 79: Instances

| Register              | Offset | Description                                                                                                                              |
|-----------------------|--------|------------------------------------------------------------------------------------------------------------------------------------------|
| TASKS_START           | 0x000  | Start the ADC and prepare the result buffer in RAM                                                                                       |
| TASKS_SAMPLE          | 0x004  | Take one ADC sample, if scan is enabled all channels are sampled                                                                         |
| TASKS_STOP            | 0x008  | Stop the ADC and terminate any on-going conversion                                                                                       |
| TASKS_CALIBRATEOFFSET | 0x00C  | Starts offset auto-calibration                                                                                                           |
| EVENTS_STARTED        | 0x100  | The ADC has started                                                                                                                      |
| EVENTS_END            | 0x104  | The ADC has filled up the Result buffer                                                                                                  |
| EVENTS_DONE           | 0x108  | A conversion task has been completed. Depending on the mode, multiple conversions might be needed for a result to be transferred to RAM. |
| EVENTS_RESULTDONE     | 0x10C  | A result is ready to get transferred to RAM.                                                                                             |
| EVENTS_CALIBRATEDONE  | 0x110  | Calibration is complete                                                                                                                  |
| EVENTS_STOPPED        | 0x114  | The ADC has stopped                                                                                                                      |
| EVENTS_CH[0].LIMITH   | 0x118  | Last results is equal or above CH[0].LIMIT.HIGH                                                                                          |
| EVENTS_CH[0].LIMITL   | 0x11C  | Last results is equal or below CH[0].LIMIT.LOW                                                                                           |
| EVENTS_CH[1].LIMITH   | 0x120  | Last results is equal or above CH[1].LIMIT.HIGH                                                                                          |
| EVENTS_CH[1].LIMITL   | 0x124  | Last results is equal or below CH[1].LIMIT.LOW                                                                                           |
| EVENTS_CH[2].LIMITH   | 0x128  | Last results is equal or above CH[2].LIMIT.HIGH                                                                                          |

| RESOLUTION    | 0x5F0  | Resolution configuration                                                                                                                                                          |
| OVERSAMPLE    | 0x5F4  | Oversampling configuration. OVERSAMPLE should not be combined with SCAN. The RESOLUTION is applied before averaging, thus for high OVERSAMPLE a higher RESOLUTION should be used. |
| SAMPLERATE    | 0x5F8  | Controls normal or continuous sample rate                                                                                                                                         |
| RESULT.PTR    | 0x62C  | Data pointer                                                                                                                                                                      |
| RESULT.MAXCNT | 0x630  | Maximum number of buffer words to transfer                                                                                                                                        |
| RESULT.AMOUNT | 0x634  | Number of buffer words transferred since last START                                                                                                                               |

Table 80: Register overview

### 6.17.11.1 TASKS\_START

Address offset: 0x000

Start the ADC and prepare the result buffer in RAM

|                  |            |             |                                                                                       |                                                    |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

### 6.17.11.23 OVERSAMPLE

Address offset: 0x5F4

Oversampling configuration. OVERSAMPLE should not be combined with SCAN. The RESOLUTION is applied before averaging, thus for high OVERSAMPLE a higher RESOLUTION should be used.

### 6.17.13 Performance factors

Clock jitter, affecting sample timing accuracy, and circuit noise can affect ADC performance.

Jitter can be between START tasks or from START task to acquisition. START timer accuracy and startup times of regulators and references will contribute to variability. Sources of circuit noise may include CPU activity and the DC/DC regulator. Best ADC performance is achieved using START timing based on the TIMER module, HFXO clock source, and Constant Latency mode.

## 6.18 SPI — Serial peripheral interface master

The SPI master provides a simple CPU interface which includes a TXD register for sending data and an RXD register for receiving data. This section is added for legacy support for now.

<sup>b</sup> Does not include temperature drift

<sup>21</sup> Maximum gain corresponds to highest capacitance.

Figure 111: SPI master

RXD-1 and TXD+1 illustrate the double buffered version of RXD and TXD respectively.

### 6.18.1 Functional description

The TXD and RXD registers are double-buffered to enable some degree of uninterrupted data flow in and out of the SPI master.

The SPI master does not implement support for chip select directly. Therefore, the CPU must use available GPIOs to select the correct slave and control this independently of the SPI master. The SPI master supports SPI modes 0 through 3.

| Mode      | Clock polarity | Clock phase     |
|-----------|----------------|-----------------|
|           | CPOL           | CPHA            |
| SPI_MODE0 | 0 (Leading)    | 0 (Active high) |
| SPI_MODE1 | 0 (Leading)    | 1 (Active low)  |
| SPI_MODE2 | 1 (Trailing)   | 0 (Active high) |
| SPI_MODE3 | 1 (Trailing)   | 1 (Active low)  |

Table 81: SPI modes

#### 6.18.1.1 SPI master mode pin configuration

The different signals SCK, MOSI, and MISO associated with the SPI master are mapped to physical pins.

This mapping is according to the configuration specified in the PSEL.SCK, PSEL.MOSI, and PSEL.MISO registers respectively. If the CONNECT field of a PSEL.xxx register is set to Disconnected, the associated SPI master signal is not connected to any physical pin. The PSEL.SCK, PSEL.MOSI, and PSEL.MISO registers and their configurations are only used as long as the SPI master is enabled, and retained only as long as the device is in ON mode. PSEL.SCK, PSEL.MOSI, and PSEL.MISO must only be configured when the SPI master is disabled.

To secure correct behavior in the SPI, the pins used by the SPI must be configured in the GPIO peripheral as described in [GPIO configuration](#) on page 284 prior to enabling the SPI. The SCK must always be connected to a pin, and that pin's input buffer must always be connected for the SPI to work. This configuration must be retained in the GPIO for the selected IOs as long as the SPI is enabled.

Only one peripheral can be assigned to drive a particular GPIO pin at a time, failing to do so may result in unpredictable behavior.

| SPI master signal | SPI master pin            | Direction | Output value        |
|-------------------|---------------------------|-----------|---------------------|
| SCK               | As specified in PSEL.SCK  | Output    | Same as CONFIG.CPOL |
| MOSI              | As specified in PSEL.MOSI | Output    | 0                   |
| MISO              | As specified in PSEL.MISO | Input     | Not applicable      |

Table 82: GPIO configuration

### 6.18.1.2 Shared resources

The SPI shares registers and other resources with other peripherals that have the same ID as the SPI. Therefore, the user must disable all peripherals that have the same ID as the SPI before the SPI can be configured and used.

Disabling a peripheral that has the same ID as the SPI will not reset any of the registers that are shared with the SPI. It is therefore important to configure all relevant SPI registers explicitly to secure that it operates correctly.

See the Instantiation table in [Instantiation](#) on page 18 for details on peripherals and their IDs.

### 6.18.1.3 SPI master transaction sequence

An SPI master transaction is started by writing the first byte, which is to be transmitted by the SPI master, to the TXD register.

Since the transmitter is double buffered, the second byte can be written to the TXD register immediately after the first one. The SPI master will then send these bytes in the order they are written to the TXD register.

The SPI master is a synchronous interface, and for every byte that is sent, a different byte will be received at the same time; this is illustrated in [SPI master transaction](#) on page 285. Bytes that are received will be moved to the RXD register where the CPU can extract them by reading the register. The RXD register is double buffered in the same way as the TXD register, and a second byte can therefore be received at the same time as the first byte is being extracted from RXD by the CPU. The SPI master will generate a READY event every time a new byte is moved to the RXD register. The double buffered byte will be moved from RXD-1 to RXD as soon as the first byte is extracted from RXD. The SPI master will stop when there are no more bytes to send in TXD and TXD+1.

Figure 112: SPI master transaction

The READY event of the third byte transaction is delayed until B is extracted from RXD in occurrence number 3 on the horizontal lifeline. The reason for this is that the third event is generated first when C is moved from RXD-1 to RXD after B is read.

The SPI master will move the incoming byte to the RXD register after a short delay following the SCK clock period of the last bit in the byte. This also means that the READY event will be delayed accordingly, see [SPI master transaction](#) on page 285. Therefore, it is important that you always clear the READY event, even if the RXD register and the data that is being received is not used.

Figure 113: SPI master transaction

## 6.18.2 Registers

| Base address | Peripheral | Instance | Description  | Configuration |
|--------------|------------|----------|--------------|---------------|
| 0x40003000   | SPI        | SPI1     | SPI master 1 | Deprecated    |
| 0x40004000   | SPI        | SPI0     | SPI master 0 | Deprecated    |

Table 83: Instances

| Register     | Offset | Description                                                   |
|--------------|--------|---------------------------------------------------------------|
| EVENTS_READY | 0x108  | TXD byte sent and RXD byte received                           |
| INTENSET     | 0x304  | Enable interrupt                                              |
| INTENCLR     | 0x308  | Disable interrupt                                             |
| ENABLE       | 0x500  | Enable SPI                                                    |
| PSEL_SCK     | 0x508  | Pin select for SCK                                            |
| PSEL_MOSI    | 0x50C  | Pin select for MOSI signal                                    |
| PSEL_MISO    | 0x510  | Pin select for MISO signal                                    |
| RXD          | 0x518  | RXD register                                                  |
| TXD          | 0x51C  | TXD register                                                  |
| FREQUENCY    | 0x524  | SPI frequency. Accuracy depends on the HFCLK source selected. |
| CONFIG       | 0x554  | Configuration register                                        |

Table 84: Register overview

### 6.18.2.1 EVENTS\_READY

Address offset: 0x108

TXD byte sent and RXD byte received

  ### 6.18.2.10 FREQUENCY

Address offset: 0x524

SPI frequency. Accuracy depends on the HFCLK source selected.

|                  |      |           |          |            |                      |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |   |   |   |   |   |   |   |   |   |   |

## 6.18.3 Electrical specification

### 6.18.3.1 SPI master interface electrical specifications

| Symbol          | Description                                            | Min. | Typ. | Max.            | Units |
|-----------------|--------------------------------------------------------|------|------|-----------------|-------|
| $f_{SPI}$       | Bit rates for SPI <sup>22</sup>                        |      |      | 8 <sup>23</sup> | Mbps  |
| $t_{SPI,START}$ | Time from writing TXD register to transmission started |      | 1    |                 | μs    |

### 6.18.3.2 Serial Peripheral Interface (SPI) Master timing specifications

| Symbol            | Description                                | Min. | Typ. | Max.          | Units |
|-------------------|--------------------------------------------|------|------|---------------|-------|
| $t_{SPI,CCLK}$    | SCK period                                 | 125  |      |               | ns    |
| $t_{SPI,RSCK,LD}$ | SCK rise time, standard drive <sup>a</sup> |      |      | $t_{RF,25pF}$ |       |

<sup>22</sup> High bit rates may require GPIOs to be set as High Drive, see GPIO chapter for more details.

<sup>23</sup> The actual maximum data rate depends on the slave's CLK to MISO and MOSI setup and hold timings.

<sup>a</sup> At 25pF load, including GPIO capacitance, see GPIO spec.

| Symbol                   | Description                                | Min.                                         | Typ. | Max.                   | Units |
|--------------------------|--------------------------------------------|----------------------------------------------|------|------------------------|-------|
| $t_{\text{SPI,RSCK,HD}}$ | SCK rise time, high drive <sup>a</sup>     |                                              |      | $t_{\text{HREF,25pF}}$ |       |
| $t_{\text{SPI,FSCK,LD}}$ | SCK fall time, standard drive <sup>a</sup> |                                              |      | $t_{\text{RF,25pF}}$   |       |
| $t_{\text{SPI,FSCK,HD}}$ | SCK fall time, high drive <sup>a</sup>     |                                              |      | $t_{\text{HREF,25pF}}$ |       |
| $t_{\text{SPI,WHSCk}}$   | SCK high time <sup>a</sup>                 | $(t_{\text{CSCK}}/2)$<br>$- t_{\text{RSCK}}$ |      |                        |       |
| $t_{\text{SPI,WLSCk}}$   | SCK low time <sup>a</sup>                  | $(t_{\text{CSCK}}/2)$<br>$- t_{\text{FSCK}}$ |      |                        |       |
| $t_{\text{SPI,SUMI}}$    | MISO to CLK edge setup time                | 19                                           |      |                        | ns    |
| $t_{\text{SPI,HMI}}$     | CLK edge to MISO hold time                 | 18                                           |      |                        | ns    |
| $t_{\text{SPI,VMO}}$     | CLK edge to MOSI valid                     |                                              |      | 59                     | ns    |

Figure 114: SPI master timing diagram

## 6.19 SPIM — Serial peripheral interface master with EasyDMA

The SPI master can communicate with multiple slaves using individual chip select signals for each of the slave devices attached to a bus.

Listed here are the main features for the SPIM

- SPI mode 0-3
- EasyDMA direct transfer to/from RAM for both SPI Slave and SPI Master
- Individual selection of IO pin for each SPI signal

Figure 115: SPIM — SPI master with EasyDMA

The SPIM does not implement support for chip select directly. Therefore, the CPU must use available GPIOs to select the correct slave and control this independently of the SPI master. The SPIM supports SPI modes 0 through 3. The CONFIG register allows setting CPOL and CPHA appropriately.

| Mode      | Clock polarity  | Clock phase  |
|-----------|-----------------|--------------|
|           | CPOL            | CPHA         |
| SPI_MODE0 | 0 (Active High) | 0 (Leading)  |
| SPI_MODE1 | 0 (Active High) | 1 (Trailing) |
| SPI_MODE2 | 1 (Active Low)  | 0 (Leading)  |
| SPI_MODE3 | 1 (Active Low)  | 1 (Trailing) |

Table 85: SPI modes

### 6.19.1 SPI master transaction sequence

An SPI master transaction consists of a sequence started by the START task followed by a number of events, and finally the STOP task.

An SPI master transaction is started by triggering the START task. The ENDTX event will be generated when the transmitter has transmitted all bytes in the TXD buffer as specified in the TXD.MAXCNT register. The ENDRX event will be generated when the receiver has filled the RXD buffer, i.e. received the last possible byte as specified in the RXD.MAXCNT register.

Following a START task, the SPI master will generate an END event when both ENDRX and ENDTX have been generated.

The SPI master is stopped by triggering the STOP task. A STOPPED event is generated when the SPI master has stopped.

If the ENDRX event has not already been generated when the SPI master has come to a stop, the SPI master will generate the ENDRX event explicitly even though the RX buffer is not full.

If the ENDTX event has not already been generated when the SPI master has come to a stop, the SPI master will generate the ENDTX event explicitly even though all bytes in the TXD buffer, as specified in the TXD.MAXCNT register, have not been transmitted.

The SPI master is a synchronous interface, and for every byte that is sent, a different byte will be received at the same time; this is illustrated in [SPI master transaction](#) on page 292.

Figure 116: SPI master transaction

### 6.19.2 Master mode pin configuration

The SCK, MOSI, and MISO signals associated with the SPI master are mapped to physical pins according to the configuration specified in the PSEL.SCK, PSEL.MOSI, and PSEL.MISO registers respectively.

The PSEL.SCK, PSEL.MOSI, and PSEL.MISO registers and their configurations are only used as long as the SPI master is enabled, and retained only as long as the device is in ON mode. PSEL.SCK, PSEL.MOSI and PSEL.MISO must only be configured when the SPI master is disabled.

To secure correct behavior in the SPI, the pins used by the SPI must be configured in the GPIO peripheral as described in [GPIO configuration](#) on page 292 prior to enabling the SPI. This configuration must be retained in the GPIO for the selected IOs as long as the SPI is enabled.

Only one peripheral can be assigned to drive a particular GPIO pin at a time. Failing to do so may result in unpredictable behavior.

| SPI master signal | SPI master pin            | Direction | Output value        |
|-------------------|---------------------------|-----------|---------------------|
| SCK               | As specified in PSEL.SCK  | Output    | Same as CONFIG.CPOL |
| MOSI              | As specified in PSEL.MOSI | Output    | 0                   |
| MISO              | As specified in PSEL.MISO | Input     | Not applicable      |

Table 86: GPIO configuration

### 6.19.3 EasyDMA

The SPIM implements EasyDMA for accessing RAM without CPU involvement.

The SPIM peripheral implements the following EasyDMA channels:

| Channel | Type   | Register Cluster |
|---------|--------|------------------|
| TXD     | READER | TXD              |
| RXD     | WRITER | RXD              |

Table 87: SPIM EasyDMA Channels

For detailed information regarding the use of EasyDMA, see [EasyDMA](#) on page 35.

The .PTR and .MAXCNT registers are double-buffered. They can be updated and prepared for the next transmission immediately after having received the STARTED event.

The SPI master will automatically stop transmitting after TXD.MAXCNT bytes have been transmitted and RXD.MAXCNT bytes have been received. If RXD.MAXCNT is larger than TXD.MAXCNT, the remaining transmitted bytes will contain the value defined in the ORC register. If TXD.MAXCNT is larger than RXD.MAXCNT, the superfluous received bytes will be discarded.

The ENDRX/ENDTX event indicate that EasyDMA has finished accessing respectively the RX/TX buffer in RAM. The END event gets generated when both RX and TX are finished accessing the buffers in RAM.

In the case of bus congestion as described in , data loss may occur.

### 6.19.4 Low power

When putting the system in low power and the peripheral is not needed, lowest possible power consumption is achieved by stopping, and then disabling the peripheral.

The STOP task may not be always needed (the peripheral might already be stopped), but if it is sent, software shall wait until the STOPPED event was received as a response before disabling the peripheral through the ENABLE register.

### 6.19.5 Registers

| Base address | Peripheral | Instance | Description  | Configuration |
|--------------|------------|----------|--------------|---------------|
| 0x40003000   | SPIM       | SPIM1    | SPI master 1 |               |
| 0x40004000   | SPIM       | SPIM0    | SPI master 0 |               |

Table 88: Instances

| Register       | Offset | Description                              |
|----------------|--------|------------------------------------------|
| TASKS_START    | 0x010  | Start SPI transaction                    |
| TASKS_STOP     | 0x014  | Stop SPI transaction                     |
| TASKS_SUSPEND  | 0x01C  | Suspend SPI transaction                  |
| TASKS_RESUME   | 0x020  | Resume SPI transaction                   |
| EVENTS_STOPPED | 0x104  | SPI transaction has stopped              |
| EVENTS_ENDRX   | 0x110  | End of RXD buffer reached                |
| EVENTS_END     | 0x118  | End of RXD buffer and TXD buffer reached |
| EVENTS_ENDTX   | 0x120  | End of TXD buffer reached                |
| EVENTS_STARTED | 0x14C  | Transaction started                      |
| SHORTS         | 0x200  | Shortcuts between local events and tasks |

| Register   | Offset | Description                                                                         |
|------------|--------|-------------------------------------------------------------------------------------|
| INTENSET   | 0x304  | Enable interrupt                                                                    |
| INTENCLR   | 0x308  | Disable interrupt                                                                   |
| ENABLE     | 0x500  | Enable SPIM                                                                         |
| PSEL.SCK   | 0x508  | Pin select for SCK                                                                  |
| PSEL.MOSI  | 0x50C  | Pin select for MOSI signal                                                          |
| PSEL.MISO  | 0x510  | Pin select for MISO signal                                                          |
| FREQUENCY  | 0x524  | SPI frequency. Accuracy depends on the HFCLK source selected.                       |
| RXD.PTR    | 0x534  | Data pointer                                                                        |
| RXD.MAXCNT | 0x538  | Maximum number of bytes in receive buffer                                           |
| RXD.AMOUNT | 0x53C  | Number of bytes transferred in the last transaction                                 |
| RXD.LIST   | 0x540  | EasyDMA list type                                                                   |
| TXD.PTR    | 0x544  | Data pointer                                                                        |
| TXD.MAXCNT | 0x548  | Maximum number of bytes in transmit buffer                                          |
| TXD.AMOUNT | 0x54C  | Number of bytes transferred in the last transaction                                 |
| TXD.LIST   | 0x550  | EasyDMA list type                                                                   |
| CONFIG     | 0x554  | Configuration register                                                              |
| ORC        | 0x5C0  | Over-read character. Character clocked out in case and over-read of the TXD buffer. |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  ## EasyDMA list type

#### 6.19.5.22 TXD.PTR

Data pointer

**Note:** See the memory chapter for details about which memories are available for EasyDMA.

#### 6.19.5.23 TXD.MAXCNT

Maximum number of bytes in transmit buffer

300

### 6.19.5.24 TXD.AMOUNT

Address offset: 0x54C

Number of bytes transferred in the last transaction

|            |  |  |  <sup>24</sup> High bit rates may require GPIOs to be set as High Drive, see GPIO chapter for more details.

<sup>25</sup> The actual maximum data rate depends on the slave's CLK to MISO and MOSI setup and hold timings.

<sup>a</sup> At 25pF load, including GPIO pin capacitance, see GPIO spec.

Figure 117: SPIM timing diagram

## 6.20 SPIS — Serial peripheral interface slave with EasyDMA

SPI slave (SPIS) is implemented with EasyDMA support for ultra low power serial communication from an external SPI master. EasyDMA in conjunction with hardware-based semaphore mechanisms removes all real-time requirements associated with controlling the SPI slave from a low priority CPU execution context.

Figure 118: SPI slave

The SPIS supports SPI modes 0 through 3. The CONFIG register allows setting CPOL and CPHA appropriately.

| Mode      | Clock polarity  | Clock phase       |
|-----------|-----------------|-------------------|
|           | CPOL            | CPHA              |
| SPI_MODE0 | 0 (Active High) | 0 (Trailing Edge) |
| SPI_MODE1 | 0 (Active High) | 1 (Leading Edge)  |
| SPI_MODE2 | 1 (Active Low)  | 0 (Trailing Edge) |
| SPI_MODE3 | 1 (Active Low)  | 1 (Leading Edge)  |

Table 90: SPI modes

### 6.20.1 Shared resources

The SPI slave shares registers and other resources with other peripherals that have the same ID as the SPI slave. Therefore, you must disable all peripherals that have the same ID as the SPI slave before the SPI slave can be configured and used.

Disabling a peripheral that has the same ID as the SPI slave will not reset any of the registers that are shared with the SPI slave. It is important to configure all relevant SPI slave registers explicitly to secure that it operates correctly.

The Instantiation table in [Instantiation](#) on page 18 shows which peripherals have the same ID as the SPI slave.

### 6.20.2 EasyDMA

The SPIS implements EasyDMA for accessing RAM without CPU involvement.

The SPIS peripheral implements the following EasyDMA channels:

| Channel | Type   | Register Cluster |
|---------|--------|------------------|
| TXD     | READER | TXD              |
| RXD     | WRITER | RXD              |

Table 91: SPIS EasyDMA Channels

For detailed information regarding the use of EasyDMA, see [EasyDMA](#) on page 35.

If RXD.MAXCNT is larger than TXD.MAXCNT, the remaining transmitted bytes will contain the value defined in the ORC register.

The END event indicates that EasyDMA has finished accessing the buffer in RAM.

### 6.20.3 SPI slave operation

SPI slave uses two memory pointers, RXD.PTR and TXD.PTR, that point to the RXD buffer (receive buffer) and TXD buffer (transmit buffer) respectively. Since these buffers are located in RAM, which can be accessed by both the SPI slave and the CPU, a hardware based semaphore mechanism is implemented to enable safe sharing.

See [SPI transaction when shortcut between END and ACQUIRE is enabled](#) on page 306.

Before the CPU can safely update the RXD.PTR and TXD.PTR pointers it must first acquire the SPI semaphore. The CPU can acquire the semaphore by triggering the ACQUIRE task and then receiving the ACQUIRED event. When the CPU has updated the RXD.PTR and TXD.PTR pointers the CPU must release the semaphore before the SPI slave will be able to acquire it. The CPU releases the semaphore by triggering the RELEASE task. This is illustrated in [SPI transaction when shortcut between END and ACQUIRE is enabled](#) on page 306. Triggering the RELEASE task when the semaphore is not granted to the CPU will have no effect.

The semaphore mechanism does not, at any time, prevent the CPU from performing read or write access to the RXD.PTR register, the TXD.PTR registers, or the RAM that these pointers are pointing to. The semaphore is only telling when these can be updated by the CPU so that safe sharing is achieved.

The semaphore is by default assigned to the CPU after the SPI slave is enabled. No ACQUIRED event will be generated for this initial semaphore handover. An ACQUIRED event will be generated immediately if the ACQUIRE task is triggered while the semaphore is assigned to the CPU.

The SPI slave will try to acquire the semaphore when CSN goes low. If the SPI slave does not manage to acquire the semaphore at this point, the transaction will be ignored. This means that all incoming data on MOSI will be discarded, and the DEF (default) character will be clocked out on the MISO line throughout the whole transaction. This will also be the case even if the semaphore is released by the CPU during the transaction. In case of a race condition where the CPU and the SPI slave try to acquire the semaphore at the same time, as illustrated in lifeline item 2 in [SPI transaction when shortcut between END and ACQUIRE is enabled](#) on page 306, the semaphore will be granted to the CPU.

If the SPI slave acquires the semaphore, the transaction will be granted. The incoming data on MOSI will be stored in the RXD buffer and the data in the TXD buffer will be clocked out on MISO.

When a granted transaction is completed and CSN goes high, the SPI slave will automatically release the semaphore and generate the END event.

As long as the semaphore is available the SPI slave can be granted multiple transactions one after the other. If the CPU is not able to reconfigure the TXD.PTR and RXD.PTR between granted transactions, the same TX data will be clocked out and the RX buffers will be overwritten. To prevent this from happening, the END\_ACQUIRE shortcut can be used. With this shortcut enabled the semaphore will be handed over to the CPU automatically after the granted transaction has completed, giving the CPU the ability to update the TXPTR and RXPTR between every granted transaction.

If the CPU tries to acquire the semaphore while it is assigned to the SPI slave, an immediate handover will not be granted. However, the semaphore will be handed over to the CPU as soon as the SPI slave has released the semaphore after the granted transaction is completed. If the END\_ACQUIRE shortcut is enabled and the CPU has triggered the ACQUIRE task during a granted transaction, only one ACQUIRE request will be served following the END event.

The MAXRX register specifies the maximum number of bytes the SPI slave can receive in one granted transaction. If the SPI slave receives more than MAXRX number of bytes, an OVERFLOW will be indicated in the STATUS register and the incoming bytes will be discarded.

The MAXTX parameter specifies the maximum number of bytes the SPI slave can transmit in one granted transaction. If the SPI slave is forced to transmit more than MAXTX number of bytes, an OVERREAD will be indicated in the STATUS register and the ORC character will be clocked out.

The RXD.AMOUNT and TXD.AMOUNT registers are updated when a granted transaction is completed. The TXD.AMOUNT register indicates how many bytes were read from the TX buffer in the last transaction, that is, ORC (over-read) characters are not included in this number. Similarly, the RXD.AMOUNT register indicates how many bytes were written into the RX buffer in the last transaction.

The ENDRX event is generated when the RX buffer has been filled.

Figure 119: SPI transaction when shortcut between END and ACQUIRE is enabled

## 6.20.4 Pin configuration

The CSN, SCK, MOSI, and MISO signals associated with the SPI slave are mapped to physical pins according to the configuration specified in the PSEL.CSN, PSEL.SCK, PSEL.MOSI, and PSEL.MISO registers respectively. If the CONNECT field of any of these registers is set to Disconnected, the associated SPI slave signal will not be connected to any physical pins.

The PSEL.CSN, PSEL.SCK, PSEL.MOSI, and PSEL.MISO registers and their configurations are only used as long as the SPI slave is enabled, and retained only as long as the device is in System ON mode, see [POWER — Power supply](#) on page 48 chapter for more information about power modes. When the peripheral is disabled, the pins will behave as regular GPIOs, and use the configuration in their respective OUT bit field and PIN\_CNFG[n] register. PSEL.CSN, PSEL.SCK, PSEL.MOSI, and PSEL.MISO must only be configured when the SPI slave is disabled.

To secure correct behavior in the SPI slave, the pins used by the SPI slave must be configured in the GPIO peripheral as described in [GPIO configuration before enabling peripheral](#) on page 307 before enabling the SPI slave. This is to secure that the pins used by the SPI slave are driven correctly if the SPI slave itself is temporarily disabled, or if the device temporarily enters System OFF. This configuration must be retained in the GPIO for the selected I/Os as long as the SPI slave is to be recognized by an external SPI master.

The MISO line is set in high impedance as long as the SPI slave is not selected with CSN.

Only one peripheral can be assigned to drive a particular GPIO pin at a time. Failing to do so may result in unpredictable behavior.

| SPI signal | SPI pin                   | Direction | Output value   | Comment                                      |
|------------|---------------------------|-----------|----------------|----------------------------------------------|
| CSN        | As specified in PSEL.CSN  | Input     | Not applicable |                                              |
| SCK        | As specified in PSEL.SCK  | Input     | Not applicable |                                              |
| MOSI       | As specified in PSEL.MOSI | Input     | Not applicable |                                              |
| MISO       | As specified in PSEL.MISO | Input     | Not applicable | Emulates that the SPI slave is not selected. |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

## 6.20.6 Electrical specification

### 6.20.6.1 SPIS slave interface electrical specifications

| Symbol                  | Description                                             | Min. | Typ. | Max.            | Units |
|-------------------------|---------------------------------------------------------|------|------|-----------------|-------|
| $f_{\text{SPIS}}$       | Bit rates for SPIS <sup>26</sup>                        |      |      | 8 <sup>27</sup> | Mbps  |
| $t_{\text{SPIS,START}}$ | Time from RELEASE task to receive/transmit (CSN active) | ..   | ..   | ..              | µs    |

### 6.20.6.2 Serial Peripheral Interface Slave (SPIS) timing specifications

| Symbol                   | Description                       | Min.             | Typ. | Max. | Units |
|--------------------------|-----------------------------------|------------------|------|------|-------|
| $t_{\text{SPIS,CCKIN}}$  | SCK input period                  | ..               | ..   | ..   | ns    |
| $t_{\text{SPIS,RFCKIN}}$ | SCK input rise/fall time          |                  |      | 30   | ns    |
| $t_{\text{SPIS,WHCKIN}}$ | SCK input high time               | 30               |      |      | ns    |
| $t_{\text{SPIS,WLCKIN}}$ | SCK input low time                | 30               |      |      | ns    |
| $t_{\text{SPIS,SUCSN}}$  | CSN to CLK setup time             | ..               | ..   | ..   | ns    |
| $t_{\text{SPIS,HCSN}}$   | CLK to CSN hold time              | 2000             |      |      | ns    |
| $t_{\text{SPIS,ASA}}$    | CSN to MISO driven                | ..               | ..   | ..   | ns    |
| $t_{\text{SPIS,ASO}}$    | CSN to MISO valid <sup>a</sup>    |                  |      | 1000 | ns    |
| $t_{\text{SPIS,DISSO}}$  | CSN to MISO disabled <sup>a</sup> |                  |      | 68   | ns    |
| $t_{\text{SPIS,CWH}}$    | CSN inactive time                 | 300              |      |      | ns    |
| $t_{\text{SPIS,VSO}}$    | CLK edge to MISO valid            |                  |      | 19   | ns    |
| $t_{\text{SPIS,HSD}}$    | MISO hold time after CLK edge     | 18 <sup>28</sup> |      |      | ns    |
| $t_{\text{SPIS,SUSI}}$   | MOSI to CLK edge setup time       | 59               |      |      | ns    |
| $t_{\text{SPIS,HSI}}$    | CLK edge to MOSI hold time        | 20               |      |      | ns    |

<sup>26</sup> High bit rates may require GPIOs to be set as High Drive, see GPIO chapter for more details.

<sup>27</sup> The actual maximum data rate depends on the master's CLK to MISO and MOSI setup and hold timings.

<sup>a</sup> At 25pF load, including GPIO capacitance, see GPIO spec.

<sup>28</sup> This is to ensure compatibility to SPI masters sampling MISO on the same edge as MOSI is output

Figure 120: SPIS timing diagram

Figure 121: Common SPIM and SPIS timing diagram

## 6.21 SWI — Software interrupts

A set of interrupts have been reserved for use as software interrupts.

### 6.21.1 Registers

| Base address | Peripheral | Instance | Description          | Configuration |
|--------------|------------|----------|----------------------|---------------|
| 0x40014000   | SWI        | SWI0     | Software interrupt 0 |               |
| 0x40015000   | SWI        | SWI1     | Software interrupt 1 |               |
| 0x40016000   | SWI        | SWI2     | Software interrupt 2 |               |
| 0x40017000   | SWI        | SWI3     | Software interrupt 3 |               |
| 0x40018000   | SWI        | SWI4     | Software interrupt 4 |               |
| 0x40019000   | SWI        | SWI5     | Software interrupt 5 |               |

Table 95: Instances

## 6.22 TEMP — Temperature sensor

The temperature sensor measures die temperature over the temperature range of the device. Linearity compensation can be implemented if required by the application.

Listed here are the main features for TEMP:

- Temperature range is greater than or equal to operating temperature of the device
- Resolution is 0.25 degrees

TEMP is started by triggering the START task.

When the temperature measurement is completed, a DATARDY event will be generated and the result of the measurement can be read from the TEMP register.

To achieve the measurement accuracy stated in the electrical specification, the crystal oscillator must be selected as the HFCLK source, see [CLOCK — Clock control](#) on page 61 for more information.

When the temperature measurement is completed, TEMP analog electronics power down to save power.

TEMP only supports one-shot operation, meaning that every TEMP measurement has to be explicitly started using the START task.

### 6.22.1 Registers

| Base address | Peripheral | Instance | Description        | Configuration |
|--------------|------------|----------|--------------------|---------------|
| 0x4000C000   | TEMP       | TEMP     | Temperature sensor |               |

Table 96: Instances

| Register       | Offset | Description                                  |
|----------------|--------|----------------------------------------------|
| TASKS_START    | 0x000  | Start temperature measurement                |
| TASKS_STOP     | 0x004  | Stop temperature measurement                 |
| EVENTS_DATARDY | 0x100  | Temperature measurement complete, data ready |
| INTENSET       | 0x304  | Enable interrupt                             |
| INTENCLR       | 0x308  | Disable interrupt                            |
| TEMP           | 0x508  | Temperature in °C (0.25° steps)              |
| A0             | 0x520  | Slope of 1st piece wise linear function      |

| Register | Offset | Description                                   |
|----------|--------|-----------------------------------------------|
| A1       | 0x524  | Slope of 2nd piece wise linear function       |
| A2       | 0x528  | Slope of 3rd piece wise linear function       |
| A3       | 0x52C  | Slope of 4th piece wise linear function       |
| A4       | 0x530  | Slope of 5th piece wise linear function       |
| A5       | 0x534  | Slope of 6th piece wise linear function       |
| B0       | 0x540  | y-intercept of 1st piece wise linear function |
| B1       | 0x544  | y-intercept of 2nd piece wise linear function |
| B2       | 0x548  | y-intercept of 3rd piece wise linear function |
| B3       | 0x54C  | y-intercept of 4th piece wise linear function |
| B4       | 0x550  | y-intercept of 5th piece wise linear function |
| B5       | 0x554  | y-intercept of 6th piece wise linear function |
| T0       | 0x560  | End point of 1st piece wise linear function   |
| T1       | 0x564  | End point of 2nd piece wise linear function   |
| T2       | 0x568  | End point of 3rd piece wise linear function   |
| T3       | 0x56C  | End point of 4th piece wise linear function   |
| T4       | 0x570  | End point of 5th piece wise linear function   |

  | ID               |  |  |  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |  |  |  |  |  |    ## 6.23 TWI — I<sup>2</sup>C compatible two-wire interface

The TWI master is compatible with I<sup>2</sup>C operating at 100 kHz and 400 kHz.

Figure 122: TWI master's main features

### 6.23.1 Functional description

This TWI master is not compatible with CBUS. The TWI transmitter and receiver are single buffered.

See, [TWI master's main features](#) on page 327.

A TWI setup comprising one master and three slaves is illustrated in [A typical TWI setup comprising one master and three slaves](#) on page 327. This TWI master is only able to operate as the only master on the TWI bus.

Figure 123: A typical TWI setup comprising one master and three slaves

This TWI master supports clock stretching performed by the slaves. The TWI master is started by triggering the STARTTX or STARTRX tasks, and stopped by triggering the STOP task.

If a NACK is clocked in from the slave, the TWI master will generate an ERROR event.

### 6.23.2 Master mode pin configuration

The different signals SCL and SDA associated with the TWI master are mapped to physical pins according to the configuration specified in the PSEL.SCL and PSEL.SDA registers respectively.

If the CONNECT field of a PSEL.xxx register is set to Disconnected, the associated TWI signal is not connected to any physical pin. The PSEL.SCL and PSEL.SDA registers and their configurations are only used

as long as the TWI master is enabled, and retained only as long as the device is in ON mode. PSEL.SCL and PSEL.SDA must only be configured when the TWI is disabled.

To secure correct signal levels on the pins used by the TWI master when the system is in OFF mode, and when the TWI master is disabled, these pins must be configured in the GPIO peripheral as described in [GPIO configuration](#) on page 328.

Only one peripheral can be assigned to drive a particular GPIO pin at a time, failing to do so may result in unpredictable behavior.

| TWI master signal | TWI master pin           | Direction | Drive strength | Output value   |
|-------------------|--------------------------|-----------|----------------|----------------|
| SCL               | As specified in PSEL.SCL | Input     | S0D1           | Not applicable |
| SDA               | As specified in PSEL.SDA | Input     | S0D1           | Not applicable |

Table 98: GPIO configuration

### 6.23.3 Shared resources

The TWI shares registers and other resources with other peripherals that have the same ID as the TWI.

Therefore, you must disable all peripherals that have the same ID as the TWI before the TWI can be configured and used. Disabling a peripheral that has the same ID as the TWI will not reset any of the registers that are shared with the TWI. It is therefore important to configure all relevant TWI registers explicitly to secure that it operates correctly.

The Instantiation table in [Instantiation](#) on page 18 shows which peripherals have the same ID as the TWI.

### 6.23.4 Master write sequence

A TWI master write sequence is started by triggering the STARTTX task. After the STARTTX task has been triggered, the TWI master will generate a start condition on the TWI bus, followed by clocking out the address and the READ/WRITE bit set to 0 (WRITE=0, READ=1).

The address must match the address of the slave device that the master wants to write to. The READ/WRITE bit is followed by an ACK/NACK bit (ACK=0 or NACK=1) generated by the slave.

After receiving the ACK bit, the TWI master will clock out the data bytes that are written to the TXD register. Each byte clocked out from the master will be followed by an ACK/NACK bit clocked in from the slave. A TXDSENT event will be generated each time the TWI master has clocked out a TXD byte, and the associated ACK/NACK bit has been clocked in from the slave.

The TWI master transmitter is single buffered, and a second byte can only be written to the TXD register after the previous byte has been clocked out and the ACK/NACK bit clocked in, that is, after the TXDSENT event has been generated.

If the CPU is prevented from writing to TXD when the TWI master is ready to clock out a byte, the TWI master will stretch the clock until the CPU has written a byte to the TXD register.

A typical TWI master write sequence is illustrated in [The TWI master writing data to a slave](#) on page 329. Occurrence 3 in the figure illustrates delayed processing of the TXDSENT event associated with TXD byte 1. In this scenario the TWI master will stretch the clock to prevent writing erroneous data to the slave.

Figure 124: The TWI master writing data to a slave

The TWI master write sequence is stopped when the STOP task is triggered whereupon the TWI master will generate a stop condition on the TWI bus.

### 6.23.5 Master read sequence

A TWI master read sequence is started by triggering the STARTRX task. After the STARTRX task has been triggered the TWI master will generate a start condition on the TWI bus, followed by clocking out the address and the READ/WRITE bit set to 1 (WRITE = 0, READ = 1).

The address must match the address of the slave device that the master wants to read from. The READ/WRITE bit is followed by an ACK/NACK bit (ACK=0 or NACK = 1) generated by the slave.

After having sent the ACK bit the TWI slave will send data to the master using the clock generated by the master.

The TWI master will generate a RXDRDY event every time a new byte is received in the RXD register.

After receiving a byte, the TWI master will delay sending the ACK/NACK bit by stretching the clock until the CPU has extracted the received byte, that is, by reading the RXD register.

The TWI master read sequence is stopped by triggering the STOP task. This task must be triggered before the last byte is extracted from RXD to ensure that the TWI master sends a NACK back to the slave before generating the stop condition.

A typical TWI master read sequence is illustrated in [The TWI master reading data from a slave](#) on page 330. Occurrence 3 in this figure illustrates delayed processing of the RXDRDY event associated with RXD byte B. In this scenario the TWI master will stretch the clock to prevent the slave from overwriting the contents of the RXD register.

Figure 125: The TWI master reading data from a slave

### 6.23.6 Master repeated start sequence

A typical repeated start sequence is one in which the TWI master writes one byte to the slave followed by reading M bytes from the slave. Any combination and number of transmit and receive sequences can be combined in this fashion. Only one shortcut to STOP can be enabled at any given time.

The figure below illustrates a repeated start sequence where the TWI master writes one byte, followed by reading M bytes from the slave without performing a stop in-between.

Figure 126: A repeated start sequence, where the TWI master writes one byte, followed by reading M bytes from the slave without performing a stop in-between

To generate a repeated start after a read sequence, a second start task must be triggered instead of the STOP task, that is, STARTRX or STARTTX. This start task must be triggered before the last byte is extracted from RXD to ensure that the TWI master sends a NACK back to the slave before generating the repeated start condition.

### 6.23.7 Low power

When putting the system in low power and the peripheral is not needed, lowest possible power consumption is achieved by stopping, and then disabling the peripheral.

The STOP task may not be always needed (the peripheral might already be stopped), but if it is sent, software shall wait until the STOPPED event was received as a response before disabling the peripheral through the ENABLE register.

### 6.23.8 Registers

| Base address | Peripheral | Instance | Description               | Configuration |
|--------------|------------|----------|---------------------------|---------------|
| 0x40003000   | TWI        | TWI0     | Two-wire interface master | Deprecated    |

Table 99: Instances

| Register         | Offset | Description                                                            |
|------------------|--------|------------------------------------------------------------------------|
| TASKS_STARTRX    | 0x000  | Start TWI receive sequence                                             |

### 6.23.8.11 EVENTS\_SUSPENDED

Address offset: 0x148

TWI entered the suspended state

Generated just after ACK bit has been transferred in a read transaction, and only if SUSPEND has been requested earlier.

  ### 6.23.9.2 Two Wire Interface (TWI) timing specifications

| Symbol                    | Description                                                           | Min.  | Typ. | Max. | Units |
|---------------------------|-----------------------------------------------------------------------|-------|------|------|-------|
| $t_{TWI,SU\_DAT}$         | Data setup time before positive edge on SCL – all modes               | 300   |      |      | ns    |
| $t_{TWI,HD\_DAT}$         | Data hold time after negative edge on SCL – all modes                 | 500   |      |      | ns    |
| $t_{TWI,HD\_STA,100kbps}$ | TWI master hold time for START and repeated START condition, 100 kbps | 10000 |      |      | ns    |
| $t_{TWI,HD\_STA,250kbps}$ | TWI master hold time for START and repeated START condition, 250 kbps | 4000  |      |      | ns    |
| $t_{TWI,HD\_STA,400kbps}$ | TWI master hold time for START and repeated START condition, 400 kbps | 2500  |      |      | ns    |
| $t_{TWI,SU\_STO,100kbps}$ | TWI master setup time from SCL high to STOP condition, 100 kbps       | 5000  |      |      | ns    |
| $t_{TWI,SU\_STO,250kbps}$ | TWI master setup time from SCL high to STOP condition, 250 kbps       | 2000  |      |      | ns    |
| $t_{TWI,SU\_STO,400kbps}$ | TWI master setup time from SCL high to STOP condition, 400 kbps       | 1250  |      |      | ns    |
| $t_{TWI,BUF,100kbps}$     | TWI master bus free time between STOP and START conditions, 100 kbps  | 5800  |      |      | ns    |
| $t_{TWI,BUF,250kbps}$     | TWI master bus free time between STOP and START conditions, 250 kbps  | 2700  |      |      | ns    |
| $t_{TWI,BUF,400kbps}$     | TWI master bus free time between STOP and START conditions, 400 kbps  | 2100  |      |      | ns    |

Figure 127: TWI timing diagram, 1 byte transaction

## 6.24 TIMER — Timer/counter

The TIMER can operate in two modes: timer and counter.

Figure 128: Block schematic for timer/counter

The timer/counter runs on the high-frequency clock source (HFCLK) and includes a four-bit (1/2X) prescaler that can divide the timer input clock from the HFCLK controller. Clock source selection between PCLK16M and PCLK1M is automatic according to TIMER base frequency set by the prescaler. The TIMER base frequency is always given as 16 MHz divided by the prescaler value.

The PPI system allows a TIMER event to trigger a task of any other system peripheral of the device. The PPI system also enables the TIMER task/event features to generate periodic output and PWM signals to any GPIO. The number of input/outputs used at the same time is limited by the number of GPIOTE channels.

The TIMER can operate in two modes, Timer mode and Counter mode. In both modes, the TIMER is started by triggering the START task, and stopped by triggering the STOP task. After the timer is stopped the timer can resume timing/counting by triggering the START task again. When timing/counting is resumed, the timer will continue from the value it had prior to being stopped.

In Timer mode, the TIMER's internal Counter register is incremented by one for every tick of the timer frequency  $f_{\text{TIMER}}$  as illustrated in [Block schematic for timer/counter](#) on page 340. The timer frequency is derived from PCLK16M as shown below, using the values specified in the PRESCALER register:

$$f_{\text{TIMER}} = 16 \text{ MHz} / (2^{\text{PRESCALER}})$$

When  $f_{\text{TIMER}} \leq 1 \text{ MHz}$  the TIMER will use PCLK1M instead of PCLK16M for reduced power consumption.

In counter mode, the TIMER's internal Counter register is incremented by one each time the COUNT task is triggered, that is, the timer frequency and the prescaler are not utilized in counter mode. Similarly, the COUNT task has no effect in Timer mode.

The TIMER's maximum value is configured by changing the bit-width of the timer in the [BITMODE](#) on page 345 register.

[PRESCALER](#) on page 345 and the [BITMODE](#) on page 345 must only be updated when the timer is stopped. If these registers are updated while the TIMER is started then this may result in unpredictable behavior.

When the timer is incremented beyond its maximum value the Counter register will overflow and the TIMER will automatically start over from zero.

The Counter register can be cleared, that is, its internal value set to zero explicitly, by triggering the CLEAR task.

The TIMER implements multiple capture/compare registers.

Independent of prescaler setting the accuracy of the TIMER is equivalent to one tick of the timer frequency  $f_{\text{TIMER}}$  as illustrated in [Block schematic for timer/counter](#) on page 340.

### 6.24.1 Capture

The TIMER implements one capture task for every available capture/compare register.

Every time the CAPTURE[n] task is triggered, the Counter value is copied to the CC[n] register.

### 6.24.2 Compare

The TIMER implements one COMPARE event for every available capture/compare register.

A COMPARE event is generated when the Counter is incremented and then becomes equal to the value specified in one of the capture compare registers. When the Counter value becomes equal to the value specified in a capture compare register CC[n], the corresponding compare event COMPARE[n] is generated.

**BITMODE** on page 345 specifies how many bits of the Counter register and the capture/compare register that are used when the comparison is performed. Other bits will be ignored.

### 6.24.3 Task delays

After the TIMER is started, the CLEAR task, COUNT task and the STOP task will guarantee to take effect within one clock cycle of the PCLK16M.

### 6.24.4 Task priority

If the START task and the STOP task are triggered at the same time, that is, within the same period of PCLK16M, the STOP task will be prioritized.

### 6.24.5 Registers

| Base address | Peripheral | Instance | Description | Configuration                                     |
|--------------|------------|----------|-------------|---------------------------------------------------|
| 0x40008000   | TIMER      | TIMER0   | Timer 0     | This timer instance has 4 CC registers (CC[0..3]) |
| 0x40009000   | TIMER      | TIMER1   | Timer 1     | This timer instance has 4 CC registers (CC[0..3]) |
| 0x4000A000   | TIMER      | TIMER2   | Timer 2     | This timer instance has 4 CC registers (CC[0..3]) |

Table 101: Instances

| Register         | Offset | Description                           |
|------------------|--------|---------------------------------------|
| TASKS_START      | 0x000  | Start Timer                           |
| TASKS_STOP       | 0x004  | Stop Timer                            |
| TASKS_COUNT      | 0x008  | Increment Timer (Counter mode only)   |
| TASKS_CLEAR      | 0x00C  | Clear time                            |
| TASKS_SHUTDOWN   | 0x010  | Shut down timer                       |
| TASKS_CAPTURE[0] | 0x040  | Capture Timer value to CC[0] register |
| TASKS_CAPTURE[1] | 0x044  | Capture Timer value to CC[1] register |
| TASKS_CAPTURE[2] | 0x048  | Capture Timer value to CC[2] register |

| Register          | Offset | Description                                    |
|-------------------|--------|------------------------------------------------|
| TASKS_CAPTURE[3]  | 0x04C  | Capture Timer value to CC[3] register          |
| TASKS_CAPTURE[4]  | 0x050  | Capture Timer value to CC[4] register          |
| TASKS_CAPTURE[5]  | 0x054  | Capture Timer value to CC[5] register          |
| EVENTS_COMPARE[0] | 0x140  | Compare event on CC[0] match                   |
| EVENTS_COMPARE[1] | 0x144  | Compare event on CC[1] match                   |
| EVENTS_COMPARE[2] | 0x148  | Compare event on CC[2] match                   |
| EVENTS_COMPARE[3] | 0x14C  | Compare event on CC[3] match                   |
| EVENTS_COMPARE[4] | 0x150  | Compare event on CC[4] match                   |
| EVENTS_COMPARE[5] | 0x154  | Compare event on CC[5] match                   |
| SHORTS            | 0x200  | Shortcuts between local events and tasks       |
| INTENSET          | 0x304  | Enable interrupt                               |
| INTENCLR          | 0x308  | Disable interrupt                              |
| MODE              | 0x504  | Timer mode selection                           |
| BITMODE           | 0x508  | Configure the number of bits used by the TIMER |
| PRESCALER         | 0x510  | Timer prescaler register                       |
| CC[0]             | 0x540  | Capture/Compare register 0                     |
| CC[1]             | 0x544  | Capture/Compare register 1                     |
| CC[2]             | 0x548  | Capture/Compare register 2                     |
| CC[3]             | 0x54C  | Capture/Compare register 3                     |
| CC[4]             | 0x550  | Capture/Compare register 4                     |
| CC[5]             | 0x554  | Capture/Compare register 5                     |

## 6.25 TWIM — I<sup>2</sup>C compatible two-wire interface master with EasyDMA

TWI master with EasyDMA (TWIM) is a two-wire half-duplex master which can communicate with multiple slave devices connected to the same bus

Listed here are the main features for TWIM:

- I<sup>2</sup>C compatible
- Supported baud rates: 100, 250, 400 kbps
- Support for clock stretching (non I<sup>2</sup>C compliant)
- EasyDMA

The two-wire interface can communicate with a bi-directional wired-AND bus with two lines (SCL, SDA). The protocol makes it possible to interconnect up to 127 individually addressable devices. TWIM is not compatible with CBUS.

The GPIOs used for each two-wire interface line can be chosen from any GPIO on the device and are independently configurable. This enables great flexibility in device pinout and efficient use of board space and signal routing.

Figure 129: TWI master with EasyDMA

A typical TWI setup consists of one master and one or more slaves. For an example, see [A typical TWI setup comprising one master and three slaves](#) on page 347. This TWIM is only able to operate as a single master on the TWI bus. Multi-master bus configuration is not supported.

Figure 130: A typical TWI setup comprising one master and three slaves

This TWI master supports clock stretching performed by the slaves. Note that the SCK pulse following a stretched clock cycle may be shorter than specified by the I2C specification.

The TWI master is started by triggering the STARTTX or STARTRX tasks, and stopped by triggering the STOP task. The TWI master will generate a STOPPED event when it has stopped following a STOP task. The TWI master cannot get stopped while it is suspended, so the STOP task has to be issued after the TWI master has been resumed.

After the TWI master is started, the STARTTX task or the STARTRX task should not be triggered again before the TWI master has stopped, i.e. following a LASTRX, LASTTX or STOPPED event.

If a NACK is clocked in from the slave, the TWI master will generate an ERROR event.

### 6.25.1 EasyDMA

The TWIM implements EasyDMA for accessing RAM without CPU involvement.

The TWIM peripheral implements the following EasyDMA channels:

| Channel | Type   | Register Cluster |
|---------|--------|------------------|
| TXD     | READER | TXD              |
| RXD     | WRITER | RXD              |

Table 103: TWIM EasyDMA Channels

For detailed information regarding the use of EasyDMA, see [EasyDMA](#) on page 35.

The .PTR and .MAXCNT registers are double-buffered. They can be updated and prepared for the next RX/TX transmission immediately after having received the RXSTARTED/TXSTARTED event.

The STOPPED event indicates that EasyDMA has finished accessing the buffer in RAM.

### 6.25.2 Master write sequence

A TWI master write sequence is started by triggering the STARTTX task. After the STARTTX task has been triggered, the TWI master will generate a start condition on the TWI bus, followed by clocking out the address and the READ/WRITE bit set to 0 (WRITE=0, READ=1).

The address must match the address of the slave device that the master wants to write to. The READ/WRITE bit is followed by an ACK/NACK bit (ACK=0 or NACK=1) generated by the slave.

After receiving the ACK bit, the TWI master will clock out the data bytes found in the transmit buffer located in RAM at the address specified in the TXD.PTR register. Each byte clocked out from the master will be followed by an ACK/NACK bit clocked in from the slave.

A typical TWI master write sequence is illustrated in [TWI master writing data to a slave](#) on page 348. Occurrence 2 in the figure illustrates clock stretching performed by the TWI master following a SUSPEND task.

A SUSPENDED event indicates that the SUSPEND task has taken effect; this event can be used to synchronize the software.

Figure 131: TWI master writing data to a slave

The TWI master will generate a LASTTX event when it starts to transmit the last byte, this is illustrated in [TWI master writing data to a slave](#) on page 348

The TWI master is stopped by triggering the STOP task, this task should be triggered during the transmission of the last byte to secure that the TWI will stop as fast as possible after sending the last byte. It is safe to use the shortcut between LASTTX and STOP to accomplish this.

Note that the TWI master does not stop by itself when the whole RAM buffer has been sent, or when an error occurs. The STOP task must be issued, through the use of a local or PPI shortcut, or in software as part of the error handler.

The TWI master cannot get stopped while it is suspended, so the STOP task has to be issued after the TWI master has been resumed.

### 6.25.3 Master read sequence

A TWI master read sequence is started by triggering the STARTRX task. After the STARTRX task has been triggered the TWI master will generate a start condition on the TWI bus, followed by clocking out the address and the READ/WRITE bit set to 1 (WRITE = 0, READ = 1). The address must match the address of the slave device that the master wants to read from. The READ/WRITE bit is followed by an ACK/NACK bit (ACK=0 or NACK = 1) generated by the slave.

After having sent the ACK bit the TWI slave will send data to the master using the clock generated by the master.

Data received will be stored in RAM at the address specified in the RXD.PTR register. The TWI master will generate an ACK after all but the last byte received from the slave. The TWI master will generate a NACK after the last byte received to indicate that the read sequence shall stop.

A typical TWI master read sequence is illustrated in [The TWI master reading data from a slave](#) on page 350. Occurrence 2 in the figure illustrates clock stretching performed by the TWI master following a SUSPEND task.

A SUSPENDED event indicates that the SUSPEND task has taken effect; this event can be used to synchronize the software.

The TWI master will generate a LASTRX event when it is ready to receive the last byte, this is illustrated in [The TWI master reading data from a slave](#) on page 350. If RXD.MAXCNT > 1 the LASTRX event is generated after sending the ACK of the previously received byte. If RXD.MAXCNT = 1 the LASTRX event is generated after receiving the ACK following the address and READ bit.

The TWI master is stopped by triggering the STOP task, this task must be triggered before the NACK bit is supposed to be transmitted. The STOP task can be triggered at any time during the reception of the last byte. It is safe to use the shortcut between LASTRX and STOP to accomplish this.

Note that the TWI master does not stop by itself when the RAM buffer is full, or when an error occurs. The STOP task must be issued, through the use of a local or PPI shortcut, or in software as part of the error handler.

The TWI master cannot get stopped while it is suspended, so the STOP task has to be issued after the TWI master has been resumed.

Figure 132: The TWI master reading data from a slave

### 6.25.4 Master repeated start sequence

A typical repeated start sequence is one in which the TWI master writes two bytes to the slave followed by reading four bytes from the slave. This example uses shortcuts to perform the simplest type of repeated start sequence, i.e. one write followed by one read. The same approach can be used to perform a repeated start sequence where the sequence is read followed by write.

The figure [A repeated start sequence, where the TWI master writes two bytes followed by reading 4 bytes from the slave](#) on page 350 illustrates this:

Figure 133: A repeated start sequence, where the TWI master writes two bytes followed by reading 4 bytes from the slave

If a more complex repeated start sequence is needed and the TWI firmware drive is serviced in a low priority interrupt it may be necessary to use the SUSPEND task and SUSPENDED event to guarantee that the correct tasks are generated at the correct time. This is illustrated in [A double repeated start sequence using the SUSPEND task to secure safe operation in low priority interrupts](#) on page 351.

Figure 134: A double repeated start sequence using the *SUSPEND* task to secure safe operation in low priority interrupts

### 6.25.5 Low power

When putting the system in low power and the peripheral is not needed, lowest possible power consumption is achieved by stopping, and then disabling the peripheral.

The STOP task may not be always needed (the peripheral might already be stopped), but if it is sent, software shall wait until the STOPPED event was received as a response before disabling the peripheral through the ENABLE register.

### 6.25.6 Master mode pin configuration

The SCL and SDA signals associated with the TWI master are mapped to physical pins according to the configuration specified in the PSEL.SCL and PSEL.SDA registers respectively.

The PSEL.SCL and PSEL.SDA registers and their configurations are only used as long as the TWI master is enabled, and retained only as long as the device is in ON mode. When the peripheral is disabled, the pins will behave as regular GPIOs, and use the configuration in their respective OUT bit field and PIN\_CNF[n] register. PSEL.SCL, PSEL.SDA must only be configured when the TWI master is disabled.

To secure correct signal levels on the pins used by the TWI master when the system is in OFF mode, and when the TWI master is disabled, these pins must be configured in the GPIO peripheral as described in [GPIO configuration before enabling peripheral](#) on page 351.

Only one peripheral can be assigned to drive a particular GPIO pin at a time. Failing to do so may result in unpredictable behavior.

| TWI master signal | TWI master pin           | Direction | Output value   | Drive strength |
|-------------------|--------------------------|-----------|----------------|----------------|
| SCL               | As specified in PSEL.SCL | Input     | Not applicable | S0D1           |
| SDA               | As specified in PSEL.SDA | Input     | Not applicable | S0D1           |

Table 104: GPIO configuration before enabling peripheral

## 6.25.8 Electrical specification

### 6.25.8.1 TWIM interface electrical specifications

| Symbol           | Description                                            | Min. | Typ. | Max. | Units |
|------------------|--------------------------------------------------------|------|------|------|-------|
| $f_{TWIM,SCL}$   | Bit rates for TWIM <sup>30</sup>                       | 100  |      | 400  | kbps  |
| $t_{TWIM,START}$ | Time from STARTRX/STARTTX task to transmission started | ..   | ..   | ..   | µs    |

### 6.25.8.2 Two Wire Interface Master (TWIM) timing specifications

| Symbol                     | Description                                                            | Min.  | Typ. | Max. | Units |
|----------------------------|------------------------------------------------------------------------|-------|------|------|-------|
| $t_{TWIM,SU\_DAT}$         | Data setup time before positive edge on SCL – all modes                | 300   |      |      | ns    |
| $t_{TWIM,HD\_DAT}$         | Data hold time after negative edge on SCL – all modes                  | 500   |      |      | ns    |
| $t_{TWIM,HD\_STA,100kbps}$ | TWIM master hold time for START and repeated START condition, 100 kbps | 10000 |      |      | ns    |
| $t_{TWIM,HD\_STA,250kbps}$ | TWIM master hold time for START and repeated START condition, 250kbps  | 4000  |      |      | ns    |
| $t_{TWIM,HD\_STA,400kbps}$ | TWIM master hold time for START and repeated START condition, 400 kbps | 2500  |      |      | ns    |
| $t_{TWIM,SU\_STO,100kbps}$ | TWIM master setup time from SCL high to STOP condition, 100 kbps       | 5000  |      |      | ns    |
| $t_{TWIM,SU\_STO,250kbps}$ | TWIM master setup time from SCL high to STOP condition, 250 kbps       | 2000  |      |      | ns    |
| $t_{TWIM,SU\_STO,400kbps}$ | TWIM master setup time from SCL high to STOP condition, 400 kbps       | 1250  |      |      | ns    |
| $t_{TWIM,BUF,100kbps}$     | TWIM master bus free time between STOP and START conditions, 100 kbps  | 5800  |      |      | ns    |
| $t_{TWIM,BUF,250kbps}$     | TWIM master bus free time between STOP and START conditions, 250 kbps  | 2700  |      |      | ns    |
| $t_{TWIM,BUF,400kbps}$     | TWIM master bus free time between STOP and START conditions, 400 kbps  | 2100  |      |      | ns    |

<sup>30</sup> High bit rates or stronger pull-ups may require GPIOs to be set as High Drive, see GPIO chapter for more details.

Figure 135: TWIM timing diagram, 1 byte transaction

### 6.25.9 Pullup resistor

Figure 136: Recommended TWIM pullup value vs. line capacitance

- The I2C specification allows a line capacitance of 400 pF at most.
- The value of internal pullup resistor ( $R_{PU}$ ) for nRF52811 can be found in [GPIO — General purpose input/output](#) on page 115.

## 6.26 TWIS — I<sup>2</sup>C compatible two-wire interface slave with EasyDMA

TWI slave with EasyDMA (TWIS) is compatible with I<sup>2</sup>C operating at 100 kHz and 400 kHz. The TWI transmitter and receiver implement EasyDMA.

Figure 137: TWI slave with EasyDMA

A typical TWI setup consists of one master and one or more slaves. For an example, see [A typical TWI setup comprising one master and three slaves](#) on page 364. TWIS is only able to operate with a single master on the TWI bus.

Figure 138: A typical TWI setup comprising one master and three slaves

The TWI slave state machine is illustrated in [TWI slave state machine](#) on page 365 and [TWI slave state machine symbols](#) on page 365 is explaining the different symbols used in the state machine.

Figure 139: TWI slave state machine

| Symbol           | Type         | Description                                                                                                                    |
|------------------|--------------|--------------------------------------------------------------------------------------------------------------------------------|
| ENABLE           | Register     | The TWI slave has been enabled via the <a href="#">ENABLE</a> register                                                         |
| PREPARETX        | Task         | The <a href="#">TASKS_PREPARETX</a> task has been triggered                                                                    |
| STOP             | Task         | The <a href="#">TASKS_STOP</a> task has been triggered                                                                         |
| PREPARERX        | Task         | The <a href="#">TASKS_PREPARERX</a> task has been triggered                                                                    |
| STOPPED          | Event        | The <a href="#">EVENTS_STOPPED</a> event was generated                                                                         |
| RXSTARTED        | Event        | The <a href="#">EVENTS_RXSTARTED</a> event was generated                                                                       |
| TXSTARTED        | Event        | The <a href="#">EVENTS_TXSTARTED</a> event was generated                                                                       |
| TX prepared      | Internal     | Internal flag indicating that a <a href="#">TASKS_PREPARETX</a> task has been triggered. This flag is not visible to the user. |
| RX prepared      | Internal     | Internal flag indicating that a <a href="#">TASKS_PREPARERX</a> task has been triggered. This flag is not visible to the user. |
| Unprepare TX     | Internal     | Clears the internal 'TX prepared' flag until next <a href="#">TASKS_PREPARETX</a> task.                                        |
| Unprepare RX     | Internal     | Clears the internal 'RX prepared' flag until next <a href="#">TASKS_PREPARERX</a> task.                                        |
| Stop sequence    | TWI protocol | A TWI stop sequence was detected                                                                                               |
| Restart sequence | TWI protocol | A TWI restart sequence was detected                                                                                            |

Table 107: TWI slave state machine symbols

The TWI slave supports clock stretching performed by the master.

The TWI slave operates in a low power mode while waiting for a TWI master to initiate a transfer. As long as the TWI slave is not addressed, it will remain in this low power mode.

To secure correct behaviour of the TWI slave, PSEL.SCL, PSEL.SDA, CONFIG and the ADDRESS[n] registers, must be configured prior to enabling the TWI slave through the ENABLE register. Similarly, changing these settings must be performed while the TWI slave is disabled. Failing to do so may result in unpredictable behaviour.

## 6.26.1 EasyDMA

The TWIS implements EasyDMA for accessing RAM without CPU involvement.

The TWIS peripheral implements the following EasyDMA channels:

| Channel | Type   | Register Cluster |
|---------|--------|------------------|
| TXD     | READER | TXD              |
| RXD     | WRITER | RXD              |

Table 108: TWIS EasyDMA Channels

For detailed information regarding the use of EasyDMA, see [EasyDMA](#) on page 35.

The STOPPED event indicates that EasyDMA has finished accessing the buffer in RAM.

## 6.26.2 TWI slave responding to a read command

Before the TWI slave can respond to a read command the TWI slave must be configured correctly and enabled via the ENABLE register. When enabled the TWI slave will be in its IDLE state where it will consume  $I_{IDLE}$ .

A read command is started when the TWI master generates a start condition on the TWI bus, followed by clocking out the address and the READ/WRITE bit set to 1 (WRITE=0, READ=1). The READ/WRITE bit is followed by an ACK/NACK bit (ACK=0 or NACK=1) response from the TWI slave.

The TWI slave is able to listen for up to two addresses at the same time. Which addresses to listen for is configured in the ADDRESS registers and the CONFIG register.

The TWI slave will only acknowledge (ACK) the read command if the address presented by the master matches one of the addresses the slave is configured to listen for. The TWI slave will generate a READ event when it acknowledges the read command.

The TWI slave is only able to detect a read command from the IDLE state.

The TWI slave will set an internal 'TX prepared' flag when the PREPARETX task is triggered.

When the read command is received the TWI slave will enter the TX state if the internal 'TX prepared' flag is set.

If the internal 'TX prepared' flag is not set when the read command is received, the TWI slave will stretch the master's clock until the PREPARETX task is triggered and the internal 'TX prepared' flag is set.

The TWI slave will generate the TXSTARTED event and clear the 'TX prepared' flag ('unprepare TX') when it enters the TX state. In this state the TWI slave will send the data bytes found in the transmit buffer to the master using the master's clock. The TWI slave will consume  $I_{TX}$  in this mode.

The TWI slave will go back to the IDLE state if the TWI slave receives a restart command when it is in the TX state.

The TWI slave is stopped when it receives the stop condition from the TWI master. A STOPPED event will be generated when the transaction has stopped. The TWI slave will clear the 'TX prepared' flag ('unprepare TX') and go back to the IDLE state when it has stopped.

The transmit buffer is located in RAM at the address specified in the TXD.PTR register. The TWI slave will only be able to send TXD.MAXCNT bytes from the transmit buffer for each transaction. If the TWI master forces the slave to send more than TXD.MAXCNT bytes, the slave will send the byte specified in the ORC register to the master instead. If this happens, an ERROR event will be generated.

The EasyDMA configuration registers, see TXD.PTR etc., are latched when the TXSTARTED event is generated.

The TWI slave can be forced to stop by triggering the STOP task. A STOPPED event will be generated when the TWI slave has stopped. The TWI slave will clear the 'TX prepared' flag and go back to the IDLE state when it has stopped, see also [Terminating an ongoing TWI transaction](#) on page 369.

Each byte sent from the slave will be followed by an ACK/NACK bit sent from the master. The TWI master will generate a NACK following the last byte that it wants to receive to tell the slave to release the bus so that the TWI master can generate the stop condition. The TXD.AMOUNT register can be queried after a transaction to see how many bytes were sent.

A typical TWI slave read command response is illustrated in [The TWI slave responding to a read command](#) on page 367. Occurrence 2 in the figure illustrates clock stretching performed by the TWI slave following a SUSPEND task.

Figure 140: The TWI slave responding to a read command

### 6.26.3 TWI slave responding to a write command

Before the TWI slave can respond to a write command the TWI slave must be configured correctly and enabled via the ENABLE register. When enabled the TWI slave will be in its IDLE state where it will consume I<sub>IDLE</sub>.

A write command is started when the TWI master generates a start condition on the TWI bus, followed by clocking out the address and the READ/WRITE bit set to 0 (WRITE=0, READ=1). The READ/WRITE bit is followed by an ACK/NACK bit (ACK=0 or NACK=1) response from the slave.

The TWI slave is able to listen for up to two addresses at the same time. Which addresses to listen for is configured in the ADDRESS registers and the CONFIG register.

The TWI slave will only acknowledge (ACK) the write command if the address presented by the master matches one of the addresses the slave is configured to listen for. The TWI slave will generate a WRITE event if it acknowledges the write command.

The TWI slave is only able to detect a write command from the IDLE state.

The TWI slave will set an internal 'RX prepared' flag when the PREPARERX task is triggered.

When the write command is received the TWI slave will enter the RX state if the internal 'RX prepared' flag is set.

If the internal 'RX prepared' flag is not set when the write command is received, the TWI slave will stretch the master's clock until the PREPARERX task is triggered and the internal 'RX prepared' flag is set.

The TWI slave will generate the RXSTARTED event and clear the internal 'RX prepared' flag ('unprepare RX') when it enters the RX state. In this state the TWI slave will be able to receive the bytes sent by the TWI master. The TWI slave will consume  $I_{RX}$  in this mode.

The TWI slave will go back to the IDLE state if the TWI slave receives a restart command when it is in the RX state.

The TWI slave is stopped when it receives the stop condition from the TWI master. A STOPPED event will be generated when the transaction has stopped. The TWI slave will clear the internal 'RX prepared' flag ('unprepare RX') and go back to the IDLE state when it has stopped.

The receive buffer is located in RAM at the address specified in the TXD.PTR register. The TWI slave will only be able to receive as many bytes as specified in the RXD.MAXCNT register. If the TWI master tries to send more bytes to the slave than the slave is able to receive, these bytes will be discarded and the bytes will be NACKed by the slave. If this happens, an ERROR event will be generated.

The EasyDMA configuration registers, see RXD.PTR etc., are latched when the RXSTARTED event is generated.

The TWI slave can be forced to stop by triggering the STOP task. A STOPPED event will be generated when the TWI slave has stopped. The TWI slave will clear the internal 'RX prepared' flag and go back to the IDLE state when it has stopped, see also [Terminating an ongoing TWI transaction](#) on page 369.

The TWI slave will generate an ACK after every byte received from the master. The RXD.AMOUNT register can be queried after a transaction to see how many bytes were received.

A typical TWI slave write command response is illustrated in [The TWI slave responding to a write command](#) on page 368. Occurrence 2 in the figure illustrates clock stretching performed by the TWI slave following a SUSPEND task.

Figure 141: The TWI slave responding to a write command

#### 6.26.4 Master repeated start sequence

An example of a repeated start sequence is one in which the TWI master writes two bytes to the slave followed by reading four bytes from the slave.

This is illustrated in [A repeated start sequence, where the TWI master writes two bytes followed by reading four bytes from the slave](#) on page 369.

It is here assumed that the receiver does not know in advance what the master wants to read, and that this information is provided in the first two bytes received in the write part of the repeated start sequence. To guarantee that the CPU is able to process the received data before the TWI slave starts to reply to the read command, the SUSPEND task is triggered via a shortcut from the READ event generated when the read command is received. When the CPU has processed the incoming data and prepared the correct data response, the CPU will resume the transaction by triggering the RESUME task.

Figure 142: A repeated start sequence, where the TWI master writes two bytes followed by reading four bytes from the slave

### 6.26.5 Terminating an ongoing TWI transaction

In some situations, e.g. if the external TWI master is not responding correctly, it may be required to terminate an ongoing transaction.

This can be achieved by triggering the STOP task. In this situation a STOPPED event will be generated when the TWI has stopped independent of whether or not a STOP condition has been generated on the TWI bus. The TWI slave will release the bus when it has stopped and go back to its IDLE state.

### 6.26.6 Low power

When putting the system in low power and the peripheral is not needed, lowest possible power consumption is achieved by stopping, and then disabling the peripheral.

The STOP task may not be always needed (the peripheral might already be stopped), but if it is sent, software shall wait until the STOPPED event was received as a response before disabling the peripheral through the ENABLE register.

### 6.26.7 Slave mode pin configuration

The SCL and SDA signals associated with the TWI slave are mapped to physical pins according to the configuration specified in the PSEL.SCL and PSEL.SDA registers respectively.

The PSEL.SCL and PSEL.SDA registers and their configurations are only used as long as the TWI slave is enabled, and retained only as long as the device is in ON mode. When the peripheral is disabled, the pins will behave as regular GPIOs, and use the configuration in their respective OUT bit field and PIN\_CNF[n] register. PSEL.SCL and PSEL.SDA must only be configured when the TWI slave is disabled.

To secure correct signal levels on the pins used by the TWI slave when the system is in OFF mode, and when the TWI slave is disabled, these pins must be configured in the GPIO peripheral as described in [GPIO configuration before enabling peripheral](#) on page 370.

Only one peripheral can be assigned to drive a particular GPIO pin at a time. Failing to do so may result in unpredictable behavior.

| TWI slave signal | TWI slave pin            | Direction | Output value   | Drive strength |
|------------------|--------------------------|-----------|----------------|----------------|
| SCL              | As specified in PSEL.SCL | Input     | Not applicable | S0D1           |
| SDA              | As specified in PSEL.SDA | Input     | Not applicable | S0D1           |

Table 109: GPIO configuration before enabling peripheral

## 6.26.8 Registers

| Base address | Peripheral | Instance | Description              | Configuration |
|--------------|------------|----------|--------------------------|---------------|
| 0x40003000   | TWIS       | TWISO    | Two-wire interface slave |               |

Table 110: Instances

### 6.26.8.5 TASKS\_PREPARETX

Address offset: 0x034

Prepare the TWI slave to respond to a read command

#### 6.26.8.6 EVENTS\_STOPPED

TWI stopped

#### 6.26.8.7 EVENTS\_ERROR

TWI error

#### 6.26.8.8 EVENTS\_RXSTARTED

Receive sequence started

#### 6.26.8.9 EVENTS\_TXSTARTED

Transmit sequence started

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | ## 6.27 UART — Universal asynchronous receiver/transmitter

Figure 144: UART configuration

<sup>31</sup> High bit rates or stronger pull-ups may require GPIOs to be set as High Drive, see GPIO chapter for more details.

### 6.27.1 Functional description

Listed here are the main features of UART.

The UART implements support for the following features:

- Full-duplex operation
- Automatic flow control
- Parity checking and generation for the 9<sup>th</sup> data bit

As illustrated in [UART configuration](#) on page 380, the UART uses the TXD and RXD registers directly to transmit and receive data. The UART uses one stop bit.

**Note:** External crystal oscillator must be enabled to obtain sufficient clock accuracy for stable communication. See [CLOCK — Clock control](#) on page 61 for more information.

### 6.27.2 Pin configuration

The different signals RXD, CTS (Clear To Send, active low), RTS (Request To Send, active low), and TXD associated with the UART are mapped to physical pins according to the configuration specified in the PSEL.RXD, PSEL.CTS, PSEL.RTS, and PSEL.TXD registers respectively.

If the CONNECT field of a PSEL.xxx register is set to Disconnected, the associated UART signal will not be connected to any physical pin. The PSEL.RXD, PSEL.CTS, PSEL.RTS, and PSEL.TXD registers and their configurations are only used as long as the UART is enabled, and retained only for the duration the device is in ON mode. PSEL.RXD, PSEL.CTS, PSEL.RTS and PSEL.TXD must only be configured when the UART is disabled.

To secure correct signal levels on the pins by the UART when the system is in OFF mode, the pins must be configured in the GPIO peripheral as described in [Pin configuration](#) on page 381.

Only one peripheral can be assigned to drive a particular GPIO pin at a time. Failing to do so may result in unpredictable behavior.

| UART pin | Direction | Output value   |
|----------|-----------|----------------|
| RXD      | Input     | Not applicable |
| CTS      | Input     | Not applicable |
| RTS      | Output    | 1              |
| TXD      | Output    | 1              |

Table 112: GPIO configuration

### 6.27.3 Shared resources

The UART shares registers and other resources with other peripherals that have the same ID as the UART.

Therefore, you must disable all peripherals that have the same ID as the UART before the UART can be configured and used. Disabling a peripheral that has the same ID as the UART will not reset any of the registers that are shared with the UART. It is therefore important to configure all relevant UART registers explicitly to ensure that it operates correctly.

See the Instantiation table in [Instantiation](#) on page 18 for details on peripherals and their IDs.

### 6.27.4 Transmission

A UART transmission sequence is started by triggering the STARTTX task.

Bytes are transmitted by writing to the TXD register. When a byte has been successfully transmitted the UART will generate a TXDRDY event after which a new byte can be written to the TXD register. A UART transmission sequence is stopped immediately by triggering the STOPTH task.

If flow control is enabled a transmission will be automatically suspended when CTS is deactivated and resumed when CTS is activated again, as illustrated in [UART transmission](#) on page 382. A byte that is in transmission when CTS is deactivated will be fully transmitted before the transmission is suspended. For more information, see [Suspending the UART](#) on page 383.

Figure 145: UART transmission

### 6.27.5 Reception

A UART reception sequence is started by triggering the STARTRX task.

The UART receiver chain implements a FIFO capable of storing six incoming RXD bytes before data is overwritten. Bytes are extracted from this FIFO by reading the RXD register. When a byte is extracted from the FIFO a new byte pending in the FIFO will be moved to the RXD register. The UART will generate an RXDRDY event every time a new byte is moved to the RXD register.

When flow control is enabled, the UART will deactivate the RTS signal when there is only space for four more bytes in the receiver FIFO. The counterpart transmitter is therefore able to send up to four bytes after the RTS signal is deactivated before data is being overwritten. To prevent overwriting data in the FIFO, the counterpart UART transmitter must therefore make sure to stop transmitting data within four bytes after the RTS line is deactivated.

The RTS signal will first be activated again when the FIFO has been emptied, that is, when all bytes in the FIFO have been read by the CPU, see [UART reception](#) on page 383.

The RTS signal will also be deactivated when the receiver is stopped through the STOPRX task as illustrated in [UART reception](#) on page 383. The UART is able to receive four to five additional bytes if they are sent in succession immediately after the RTS signal has been deactivated. This is possible because the UART is, even after the STOPRX task is triggered, able to receive bytes for an extended period of time dependent on the configured baud rate. The UART will generate a receiver timeout event (RXTO) when this period has elapsed.

To prevent loss of incoming data the RXD register must only be read one time following every RXDRDY event.

To secure that the CPU can detect all incoming RXDRDY events through the RXDRDY event register, the RXDRDY event register must be cleared before the RXD register is read. The reason for this is that the UART is allowed to write a new byte to the RXD register, and therefore can also generate a new event, immediately after the RXD register is read (emptied) by the CPU.

Figure 146: UART reception

As indicated in occurrence 2 in the figure, the RXDRDY event associated with byte B is generated first after byte A has been extracted from RXD.

### 6.27.6 Suspending the UART

The UART can be suspended by triggering the SUSPEND task.

SUSPEND will affect both the UART receiver and the UART transmitter, i.e. the transmitter will stop transmitting and the receiver will stop receiving. UART transmission and reception can be resumed, after being suspended, by triggering STARTTX and STARTRX respectively.

Following a SUSPEND task, an ongoing TXD byte transmission will be completed before the UART is suspended.

When the SUSPEND task is triggered, the UART receiver will behave in the same way as it does when the STOPRX task is triggered.

### 6.27.7 Error conditions

An ERROR event, in the form of a framing error, will be generated if a valid stop bit is not detected in a frame. Another ERROR event, in the form of a break condition, will be generated if the RXD line is held active low for longer than the length of a data frame. Effectively, a framing error is always generated before a break condition occurs.

### 6.27.8 Using the UART without flow control

If flow control is not enabled, the interface will behave as if the CTS and RTS lines are kept active all the time.

### 6.27.9 Parity and stop bit configuration

Automatic even parity generation for both transmission and reception can be configured using the register **CONFIG** on page 392. See the register description for details.

The amount of stop bits can also be configured through the register **CONFIG** on page 392.

### 6.27.10 Registers

| Base address | Peripheral | Instance | Description                                 | Configuration |
|--------------|------------|----------|---------------------------------------------|---------------|
| 0x40002000   | UART       | UART0    | Universal asynchronous receiver/transmitter | Deprecated    |

Table 113: Instances

| Register      | Offset | Description                                               |
|---------------|--------|-----------------------------------------------------------|
| TASKS_STARTRX | 0x000  | Start UART receiver                                       |
| TASKS_STOPRX  | 0x004  | Stop UART receiver                                        |
| TASKS_STARTTX | 0x008  | Start UART transmitter                                    |
| TASKS_STOPTX  | 0x00C  | Stop UART transmitter                                     |
| TASKS_SUSPEND | 0x01C  | Suspend UART                                              |
| EVENTS_CTS    | 0x100  | CTS is activated (set low). Clear To Send.                |
| EVENTS_NCTS   | 0x104  | CTS is deactivated (set high). Not Clear To Send.         |
| EVENTS_RXDRDY | 0x108  | Data received in RXD                                      |
| EVENTS_TXDRDY | 0x11C  | Data sent from TXD                                        |
| EVENTS_ERROR  | 0x124  | Error detected                                            |
| EVENTS_RXT0   | 0x144  | Receiver timeout                                          |
| SHORTS        | 0x200  | Shortcuts between local events and tasks                  |
| INTENSET      | 0x304  | Enable interrupt                                          |
| INTENCLR      | 0x308  | Disable interrupt                                         |
| ERRORSRC      | 0x480  | Error source                                              |
| ENABLE        | 0x500  | Enable UART                                               |
| PSEL.RTS      | 0x508  | Pin select for RTS                                        |

 | $t_{\text{UART,CTSH}}$  | CTS high time                                          | 1    |      |      | $\mu\text{s}$ |
| $t_{\text{UART,START}}$ | Time from STARTRX/STARTTX task to transmission started |      | 1    |      | $\mu\text{s}$ |

## 6.28 UARTE — Universal asynchronous receiver/transmitter with EasyDMA

The Universal asynchronous receiver/transmitter with EasyDMA (UARTE) offers fast, full-duplex, asynchronous serial communication with built-in flow control (CTS, RTS) support in hardware at a rate up to 1 Mbps, and EasyDMA data transfer from/to RAM.

Listed here are the main features for UARTE:

- Full-duplex operation
- Automatic hardware flow control
- Optional even parity bit checking and generation
- EasyDMA
- Up to 1 Mbps baudrate
- Return to IDLE between transactions supported (when using HW flow control)
- One or two stop bit
- Least significant bit (LSB) first

<sup>32</sup> High baud rates may require GPIOs to be set as High Drive, see GPIO chapter for more details.

Figure 147: UARTE configuration

The GPIOs used for each UART interface can be chosen from any GPIO on the device and are independently configurable. This enables great flexibility in device pinout and efficient use of board space and signal routing.

**Note:** External crystal oscillator must be enabled to obtain sufficient clock accuracy for stable communication. See [CLOCK — Clock control](#) on page 61 for more information.

### 6.28.1 EasyDMA

The UARTE implements EasyDMA for reading and writing to and from the RAM.

If the TXD.PTR and the RXD.PTR are not pointing to the Data RAM region, an EasyDMA transfer may result in a HardFault or RAM corruption. See [Memory](#) on page 16 for more information about the different memory regions.

The .PTR and .MAXCNT registers are double-buffered. They can be updated and prepared for the next RX/TX transmission immediately after having received the RXSTARTED/TXSTARTED event.

The ENDRX/ENDTX event indicates that EasyDMA has finished accessing respectively the RX/TX buffer in RAM.

### 6.28.2 Transmission

The first step of a DMA transmission is storing bytes in the transmit buffer and configuring EasyDMA. This is achieved by writing the initial address pointer to TXD.PTR, and the number of bytes in the RAM buffer to TXD.MAXCNT. The UARTE transmission is started by triggering the STARTTX task.

After each byte has been sent over the TXD line, a TXDRDY event will be generated.

When all bytes in the TXD buffer, as specified in the TXD.MAXCNT register, have been transmitted, the UARTE transmission will end automatically and an ENDTX event will be generated.

A UARTE transmission sequence is stopped by triggering the STOPTX task, a TXSTOPPED event will be generated when the UARTE transmitter has stopped.

If the ENDTX event has not already been generated when the UARTE transmitter has come to a stop, the UARTE will generate the ENDTX event explicitly even though all bytes in the TXD buffer, as specified in the TXD.MAXCNT register, have not been transmitted.

If flow control is enabled through the HWFC field in the CONFIG register, a transmission will be automatically suspended when CTS is deactivated and resumed when CTS is activated again, as illustrated in [UARTE transmission](#) on page 394. A byte that is in transmission when CTS is deactivated will be fully transmitted before the transmission is suspended.

Figure 148: UARTe transmission

The UARTe transmitter will be in its lowest activity level, and consume the least amount of energy, when it is stopped, i.e. before it is started via `STARTTX` or after it has been stopped via `STOPTX` and the `TXSTOPPED` event has been generated. See [POWER — Power supply](#) on page 48 for more information about power modes.

### 6.28.3 Reception

The UARTe receiver is started by triggering the `STARTRX` task. The UARTe receiver is using EasyDMA to store incoming data in an RX buffer in RAM.

The RX buffer is located at the address specified in the `RXD.PTR` register. The `RXD.PTR` register is double-buffered and it can be updated and prepared for the next `STARTRX` task immediately after the `RXSTARTED` event is generated. The size of the RX buffer is specified in the `RXD.MAXCNT` register and the UARTe will generate an `ENDRX` event when it has filled up the RX buffer, see [UARTe reception](#) on page 395.

For each byte received over the `RXD` line, an `RXDRDY` event will be generated. This event is likely to occur before the corresponding data has been transferred to Data RAM.

The `RXD.AMOUNT` register can be queried following an `ENDRX` event to see how many new bytes have been transferred to the RX buffer in RAM since the previous `ENDRX` event.

Figure 149: UARTE reception

The UARTE receiver is stopped by triggering the STOPRX task. An RXTO event is generated when the UARTE has stopped. The UARTE will make sure that an impending ENDRX event will be generated before the RXTO event is generated. This means that the UARTE will guarantee that no ENDRX event will be generated after RXTO, unless the UARTE is restarted or a FLUSHRX command is issued after the RXTO event is generated.

**Important:** If the ENDRX event has not already been generated when the UARTE receiver has come to a stop, which implies that all pending content in the RX FIFO has been moved to the RX buffer, the UARTE will generate the ENDRX event explicitly even though the RX buffer is not full. In this scenario the ENDRX event will be generated before the RXTO event is generated.

To be able to know how many bytes have actually been received into the RX buffer, the CPU can read the RXD.AMOUNT register following the ENDRX event or the RXTO event.

The UARTE is able to receive up to four bytes after the STOPRX task has been triggered as long as these are sent in succession immediately after the RTS signal is deactivated. This is possible because after the RTS is deactivated the UARTE is able to receive bytes for an extended period equal to the time it takes to send 4 bytes on the configured baud rate.

After the RXTO event is generated the internal RX FIFO may still contain data, and to move this data to RAM the FLUSHRX task must be triggered. To make sure that this data does not overwrite data in the RX buffer, the RX buffer should be emptied or the RXD.PTR should be updated before the FLUSHRX task is triggered. To make sure that all data in the RX FIFO is moved to the RX buffer, the RXD.MAXCNT register must be set to  $RXD.MAXCNT > 4$ , see [UARTE reception with forced stop via STOPRX](#) on page 396. The UARTE will generate the ENDRX event after completing the FLUSHRX task even if the RX FIFO was empty or if the RX buffer does not get filled up. To be able to know how many bytes have actually been received into the RX buffer in this case, the CPU can read the RXD.AMOUNT register following the ENDRX event.

If HW flow control is enabled through the HWFC field in the CONFIG register, the RTS signal will be deactivated when the receiver is stopped via the STOPRX task or when the UARTE is only able to receive four more bytes in its internal RX FIFO.

The UARTE receiver will be in its lowest activity level, and consume the least amount of energy, when it is stopped, i.e. before it is started via STARTRX or after it has been stopped via STOPRX and the RXTO event has been generated. See [POWER — Power supply](#) on page 48 for more information about power modes.

An ERROR event, in the form of a framing error, will be generated if a valid stop bit is not detected in a frame. Another ERROR event, in the form of a break condition, will be generated if the RXD line is held active low for longer than the length of a data frame. Effectively, a framing error is always generated before a break condition occurs.

### 6.28.5 Using the UARTE without flow control

### 6.28.6 Parity and stop bit configuration

The amount of stop bits can also be configured through the register [CONFIG](#) on page 410.

When putting the system in low power and the peripheral is not needed, lowest possible power consumption is achieved by stopping, and then disabling the peripheral.

**NORDIC**  
SEMICONDUCTOR

## 6.28.8 Pin configuration

The different signals RXD, CTS (Clear To Send, active low), RTS (Request To Send, active low), and TXD associated with the UARTE are mapped to physical pins according to the configuration specified in the PSEL.RXD, PSEL.CTS, PSEL.RTS, and PSEL.TXD registers respectively.

The PSEL.RXD, PSEL.CTS, PSEL.RTS, and PSEL.TXD registers and their configurations are only used as long as the UARTE is enabled, and retained only for the duration the device is in ON mode. PSEL.RXD, PSEL.RTS, PSEL.RTS and PSEL.TXD must only be configured when the UARTE is disabled.

To secure correct signal levels on the pins by the UARTE when the system is in OFF mode, the pins must be configured in the GPIO peripheral as described in [GPIO configuration before enabling peripheral](#) on page 397.

Only one peripheral can be assigned to drive a particular GPIO pin at a time. Failing to do so may result in unpredictable behavior.

| UARTE signal | UARTE pin                | Direction | Output value   |
|--------------|--------------------------|-----------|----------------|
| RXD          | As specified in PSEL.RXD | Input     | Not applicable |
| CTS          | As specified in PSEL.CTS | Input     | Not applicable |
| RTS          | As specified in PSEL.RTS | Output    | 1              |
| TXD          | As specified in PSEL.TXD | Output    | 1              |

Table 115: GPIO configuration before enabling peripheral

| TASKS_STOPRX     | 0x004  | Stop UART receiver                                                     |
| TASKS_STARTTX    | 0x008  | Start UART transmitter                                                 |
| TASKS_STOPTX     | 0x00C  | Stop UART transmitter                                                  |
| TASKS_FLUSHRX    | 0x02C  | Flush RX FIFO into RX buffer                                           |
| EVENTS_CTS       | 0x100  | CTS is activated (set low). Clear To Send.                             |
| EVENTS_NCTS      | 0x104  | CTS is deactivated (set high). Not Clear To Send.                      |
| EVENTS_RXDRDY    | 0x108  | Data received in RXD (but potentially not yet transferred to Data RAM) |
| EVENTS_ENDRX     | 0x110  | Receive buffer is filled up                                            |
| EVENTS_TXDRDY    | 0x11C  | Data sent from TXD                                                     |
| EVENTS_ENDTX     | 0x120  | Last TX byte transmitted                                               |
| EVENTS_ERROR     | 0x124  | Error detected                                                         |
| EVENTS_RXTO      | 0x144  | Receiver timeout                                                       |
| EVENTS_RXSTARTED | 0x14C  | UART receiver has started                                              |
| EVENTS_TXSTARTED | 0x150  | UART transmitter has started                                           |
| EVENTS_TXSTOPPED | 0x158  | Transmitter stopped                                                    |
| SHORTS           | 0x200  | Shortcuts between local events and tasks                               |
| INTEN            | 0x300  | Enable or disable interrupt                                            |
| INTENSET         | 0x304  | Enable interrupt                                                       |
| INTENCLR         | 0x308  | Disable interrupt                                                      |

| Register                                           | Offset | Description                                               |
|----------------------------------------------------|--------|-----------------------------------------------------------|
| ERRORSRC                                           | 0x480  | Error source                                              |
| Note : this register is read / write one to clear. |        |                                                           |
| ENABLE                                             | 0x500  | Enable UART                                               |
| PSEL.RTS                                           | 0x508  | Pin select for RTS signal                                 |
| PSEL.TXD                                           | 0x50C  | Pin select for TXD signal                                 |
| PSEL.CTS                                           | 0x510  | Pin select for CTS signal                                 |
| PSEL.RXD                                           | 0x514  | Pin select for RXD signal                                 |
| BAUDRATE                                           | 0x524  | Baud rate. Accuracy depends on the HFCLK source selected. |
| RXD.PTR                                            | 0x534  | Data pointer                                              |
| RXD.MAXCNT                                         | 0x538  | Maximum number of bytes in receive buffer                 |
| RXD.AMOUNT                                         | 0x53C  | Number of bytes transferred in the last transaction       |
| TXD.PTR                                            | 0x544  | Data pointer                                              |
| TXD.MAXCNT                                         | 0x548  | Maximum number of bytes in transmit buffer                |
| TXD.AMOUNT                                         | 0x54C  | Number of bytes transferred in the last transaction       |
| CONFIG                                             | 0x56C  | Configuration of parity and hardware flow control         |

Table 117: Register overview

### 6.28.9.1 TASKS\_STARTRX

Address offset: 0x000

Start UART receiver

|                  |            |               |          |                                                                                       |  |  |  |  |  |  |  |                     |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

### 6.28.9.3 TASKS\_STARTTX

Address offset: 0x008

Start UART transmitter

#### 6.28.9.4 TASKS STOPTHX

### Stop UART transmitter

### 6.28.9.5 TASKS FLUSHRX

Flush RX FIFO into RX buffer

#### 6.28.9.6 EVENTS CTS

CTS is activated (set low). Clear To Send.

#### 6.28.9.7 EVENTS NCTS

CTS is deactivated (set high). Not Clear To Send.

Maximum number of bytes in transmit buffer

|            |  |  |  |  ### 6.28.10.1 UARTE electrical specification

| Symbol                   | Description                                            | Min. | Typ. | Max. | Units |
|--------------------------|--------------------------------------------------------|------|------|------|-------|
| f <sub>UARTE</sub>       | Baud rate for UARTE <sup>33</sup> .                    |      |      | 1000 | kbps  |
| t <sub>UARTE,CTSH</sub>  | CTS high time                                          | 1    |      |      | μs    |
| t <sub>UARTE,START</sub> | Time from STARTRX/STARTTX task to transmission started | ..   | ..   | ..   | μs    |

A countdown watchdog timer using the low-frequency clock source (LFCLK) offers configurable and robust protection against application lock-up.

The watchdog can be paused during long CPU sleep periods for low power applications and when the debugger has halted the CPU. The watchdog is implemented as a down-counter that generates a TIMEOUT event when it wraps over after counting down to 0. When the watchdog timer is started through the START task, the watchdog counter is loaded with the value specified in the CRV register. This counter is also reloaded with the value specified in the CRV register when a reload request is granted.

4454 140 v1.0

The watchdog's timeout period is given by:

$$\text{timeout [s]} = (\text{CRV} + 1) / 32768$$

When started, the watchdog will automatically force the 32.768 kHz RC oscillator on as long as no other 32.768 kHz clock source is running and generating the 32.768 kHz system clock, see chapter [CLOCK — Clock control](#) on page 61.

### 6.29.1 Reload criteria

The watchdog has eight separate reload request registers, which shall be used to request the watchdog to reload its counter with the value specified in the CRV register. To reload the watchdog counter, the special value 0x6E524635 needs to be written to all enabled reload registers.

One or more RR registers can be individually enabled through the RREN register.

### 6.29.2 Temporarily pausing the watchdog

By default, the watchdog will be active counting down the down-counter while the CPU is sleeping and when it is halted by the debugger. It is however possible to configure the watchdog to automatically pause while the CPU is sleeping as well as when it is halted by the debugger.

### 6.29.3 Watchdog reset

A TIMEOUT event will automatically lead to a watchdog reset.

See [Reset](#) on page 52 for more information about reset sources. If the watchdog is configured to generate an interrupt on the TIMEOUT event, the watchdog reset will be postponed with two 32.768 kHz clock cycles after the TIMEOUT event has been generated. Once the TIMEOUT event has been generated, the impending watchdog reset will always be effectuated.

The watchdog must be configured before it is started. After it is started, the watchdog's configuration registers, which comprise registers CRV, RREN, and CONFIG, will be blocked for further configuration.

The watchdog can be reset from several reset sources, see [Reset behavior](#) on page 53.

When the device starts running again, after a reset, or waking up from OFF mode, the watchdog configuration registers will be available for configuration again.

### 6.29.4 Registers

| Base address | Peripheral | Instance | Description    | Configuration |
|--------------|------------|----------|----------------|---------------|
| 0x40010000   | WDT        | WDT      | Watchdog timer |               |

## 6.29.5 Electrical specification

### 6.29.5.1 Watchdog Timer Electrical Specification

| Symbol           | Description       | Min.        | Typ. | Max. | Units |
|------------------|-------------------|-------------|------|------|-------|
| t <sub>WDT</sub> | Time out interval | 458 $\mu$ s |      | 36 h |       |

# 7 Hardware and layout

## 7.1 Pin assignments

The pin assignment figures and tables describe the pinouts for the product variants of the chip. There are also recommendations for how the GPIO pins should be configured, in addition to any usage restrictions.

### 7.1.1 QFN48 pin assignments

The nRF52811 QFN48 pin assignment table and figure describe the pinouts for this variant of the chip.

Figure 151: QFN48 pin assignments, top view

| Pin | Name  | Type         | Description                               |
|-----|-------|--------------|-------------------------------------------|
| 1   | DEC1  | Power        | 0.9 V regulator digital supply decoupling |
| 2   | P0.00 | Digital I/O  | General purpose I/O                       |
|     | XL1   | Analog input | Connection for 32.768 kHz crystal (LFXO)  |

| Pin | Name   | Type          | Description                                             |
|-----|--------|---------------|---------------------------------------------------------|
| 3   | P0.01  | Digital I/O   | General purpose I/O                                     |
|     | XL2    | Analog input  | Connection for 32.768 kHz crystal (LFXO)                |
| 4   | P0.02  | Digital I/O   | General purpose I/O                                     |
|     | AIN0   | Analog input  | COMP input                                              |
|     |        |               | SAADC input                                             |
| 5   | P0.03  | Digital I/O   | General purpose I/O                                     |
|     | AIN1   | Analog input  | COMP input                                              |
|     |        |               | SAADC input                                             |
| 6   | P0.04  | Digital I/O   | General purpose I/O                                     |
|     | AIN2   | Analog input  | COMP input                                              |
|     |        |               | SAADC input                                             |
| 7   | P0.05  | Digital I/O   | General purpose I/O                                     |

Table 121: QFN32 pin assignments

### 7.1.3 WLCSP ball assignments

The nRF52811 ball assignment table and figure describe the assignments for this variant of the chip.

Figure 153: WLCSP ball assignments, top view

Balls not mentioned in the ball assignments table below are not connected (NC) and must be soldered to the PCB.

| Pin | Name   | Type          | Description                                                                |
|-----|--------|---------------|----------------------------------------------------------------------------|
| A1  | XC1    | Analog input  | Connection for 32 MHz crystal                                              |
| A2  | XC2    | Analog input  | Connection for 32 MHz crystal                                              |
| A3  | DEC2   | Power         | 1.3 V regulator supply decoupling (radio supply)                           |
| A4  | DEC4   | Power         | 1.3 V analog supply.<br>Input from DC/DC converter. Output from 1.3 V LDO. |
| A5  | DCC    | Power         | DC/DC converter output (3.3 V PWM)                                         |
| A6  | VDD    | Power         | Power (battery) supply                                                     |
| B3  | VSS    | Power         | Ground                                                                     |
| B4  | VSS    | Power         | Ground                                                                     |
| B5  | P0.00  | Digital I/O   | General purpose I/O                                                        |
|     | XL1    | Analog input  | Connection for 32.768 kHz crystal (LFXO)                                   |
| B6  | DEC1   | Power         | 0.9 V regulator digital supply decoupling                                  |
| C1  | VSS_PA | Power         | Ground                                                                     |
| D3  | VSS    | Power         | Ground                                                                     |
| D4  | VSS    | Power         | Ground                                                                     |

Table 122: WLCSP ball assignments

### 7.1.4 GPIO pins located near the radio

Radio performance parameters, such as sensitivity, may be affected by high frequency digital I/O with large sink/source current close to the radio power supply and antenna pins.

[GPIO recommended usage](#) on page 423 identifies some GPIO pins that have recommended usage guidelines for maximizing radio performance in an application.

| GPIO  | QFN48 pin | QFN32 pin | Recommended usage                  |
|-------|-----------|-----------|------------------------------------|
| P0.25 | 37        | 26        | Low drive, low frequency I/O only. |
| P0.26 | 38        |           |                                    |
| P0.27 | 39        |           |                                    |
| P0.28 | 40        | 27        |                                    |
| P0.29 | 41        |           |                                    |

Table 123: GPIO recommended usage

## 7.2 Mechanical specifications

The mechanical specifications for the packages show the dimensions in millimeters.

### 7.2.1 QFN48 6 x 6 mm package

Dimensions in millimeters for the nRF52811 QFN48 6 x 6 mm package.

Figure 154: QFN48 6 x 6 mm package

|      | A    | A1   | A3   | b    | D, E | D2, E2 | e    | K    | L    |
|------|------|------|------|------|------|--------|------|------|------|
| Min. | 0.80 | 0.00 |      | 0.15 |      | 4.50   |      | 0.20 | 0.35 |
| Nom. | 0.85 | 0.04 | 0.20 | 0.20 | 6.00 | 4.60   | 0.40 |      | 0.40 |
| Max. | 0.90 | 0.05 |      | 0.25 |      | 4.70   |      |      | 0.45 |

Table 124: QFN48 dimensions in millimeters

## 7.2.2 QFN32 5 x 5 mm package

Dimensions in millimeters for the nRF52811 QFN32 5 x 5 mm package.

Figure 155: QFN32 5 x 5 mm package

|      | A    | A1   | A3   | b    | D, E | D2, E2 | e    | K    | L    |
|------|------|------|------|------|------|--------|------|------|------|
| Min. | 0.80 | 0.00 |      | 0.20 |      | 3.40   |      | 0.25 | 0.35 |
| Nom. | 0.85 | 0.04 | 0.20 | 0.25 | 5.00 | 3.50   | 0.50 |      | 0.40 |
| Max. | 0.90 | 0.05 |      | 0.30 |      | 3.60   |      |      | 0.45 |

Table 125: QFN32 dimensions in millimeters

## 7.2.3 WLCSP 2.482 x 2.464 mm package

Dimensions in millimeters for the nRF52811 WLCSP 2.482 x 2.464 mm package.

Figure 156: WLCSP 2.482 x 2.464 mm package

|      | A     | A1   | A3    | b     | C1  | D     | E     | D2  | E2  | e   | K   | L   |
|------|-------|------|-------|-------|-----|-------|-------|-----|-----|-----|-----|-----|
| Min. | 0.419 | 0.12 | 0.299 | 0.197 |     |       |       |     |     |     |     |     |
| Nom. | 0.477 |      | 0.327 |       | 0.2 | 2.482 | 2.464 | 2.0 | 2.0 | 0.4 | 1.0 | 1.0 |
| Max. | 0.535 | 0.18 | 0.355 | 0.257 |     |       |       |     |     |     |     |     |

## 7.3 Reference circuitry

To ensure good RF performance when designing PCBs, it is highly recommended to use the PCB layouts and component values provided by Nordic Semiconductor.

Documentation for the different package reference circuits, including Altium Designer files, PCB layout files, and PCB production files can be downloaded from [Reference layout nRF52 Series](#).

### 7.3.1 Schematic QFAA QFN48 with internal LDO regulator setup

In addition to the schematic, the bill of material (BOM) is also provided.

Figure 157: QFAA QFN48 with internal LDO regulator setup

**Note:** For PCB reference layouts, see [Reference layout nRF52 Series](#).

| Designator       | Value         | Description                                                                                  | Footprint |
|------------------|---------------|----------------------------------------------------------------------------------------------|-----------|
| C1, C2, C11, C12 | 12 pF         | Capacitor, NP0, $\pm 2\%$                                                                    | 0402      |

### 7.3.8 PCB guidelines

A well designed PCB is necessary to achieve good RF performance. Poor layout can lead to loss in performance or functionality.

A qualified RF layout for the IC and its surrounding components, including matching networks, can be downloaded from [Reference layout nRF52 Series](#).

To ensure optimal performance it is essential that you follow the schematics and layout references closely. Especially in the case of the antenna matching circuitry (components between device pin ANT and the antenna), any changes to the layout can change the behavior, resulting in degradation of RF performance or a need to change component values. All reference circuits are designed for use with a 50  $\Omega$  single-ended antenna.

A PCB with a minimum of two layers, including a ground plane, is recommended for optimal performance. On PCBs with more than two layers, put a keep-out area on the inner layers directly below the antenna matching circuitry (components between device pin ANT and the antenna) to reduce the stray capacitances that influence RF performance.

A matching network is needed between the RF pin ANT and the antenna, to match the antenna impedance (normally 50  $\Omega$ ) to the optimum RF load impedance for the chip. For optimum performance, the impedance for the matching network should be set as described in the recommended package reference circuitry in [Reference circuitry](#) on page 425 above.

The DC supply voltage should be decoupled as close as possible to the VDD pins with high performance RF capacitors. See the schematics for recommended decoupling capacitor values. The supply voltage for the chip should be filtered and routed separately from the supply voltages of any digital circuitry.

Long power supply lines on the PCB should be avoided. All device grounds, VDD connections, and VDD bypass capacitors must be connected as close as possible to the IC. For a PCB with a topside RF ground plane, the VSS pins should be connected directly to the ground plane. For a PCB with a bottom ground plane, the best technique is to have via holes as close as possible to the VSS pads. A minimum of one via hole should be used for each VSS pin.

Fast switching digital signals should not be routed close to the crystal or the power supply lines. Capacitive loading of fast switching digital output lines should be minimized in order to avoid radio interference.

### 7.3.9 PCB layout example

The PCB layout shown as the example is a reference layout for the QFN48 package with internal LDO setup.

**Important:** Pay attention to how the capacitor C3 is grounded. It is not directly connected to the ground plane, but grounded via VSS pin 31. This is done to create additional filtering of harmonic components.

For all available reference layouts, see [Reference layout nRF52 Series](#).

*Figure 166: Bottom layer*

**Important:** No components in bottom layer.

# 8 Recommended operating conditions

The operating conditions are the physical parameters that the chip can operate within.

| Symbol             | Parameter                                  | Notes | Min. | Nom. | Max. | Units |
|--------------------|--------------------------------------------|-------|------|------|------|-------|
| VDD                | Supply voltage, independent of DCDC enable |       | 1.7  | 3.0  | 3.6  | V     |
| t <sub>R_VDD</sub> | Supply rise time (0 V to 1.7 V)            |       |      |      | 60   | ms    |
| TA                 | Operating temperature                      |       | -40  | 25   | 85   | °C    |

Table 134: Recommended operating conditions

**Important:** The on-chip power-on reset circuitry may not function properly for rise times longer than the specified maximum.

## 8.1 WLCSP light sensitivity

WLCSP package variants are sensitive to visible and near infrared light, which means that a final product design must shield the chip properly.

For the CAAA package variant, the marking side is covered with a light absorbing film, while the side edges of the chip and the ball side must be protected by coating or other means.

# 9 Absolute maximum ratings

Maximum ratings are the extreme limits to which the chip can be exposed for a limited amount of time without permanently damaging it. Exposure to absolute maximum ratings for prolonged periods of time may affect the reliability of the device.

| Note                                                | Min.                       | Max.      | Unit               |
|-----------------------------------------------------|----------------------------|-----------|--------------------|

# 10 Ordering information

This chapter contains information on IC marking, ordering codes, and container sizes.

## 10.1 IC marking

The IC package is marked like described below.

|     |    |     |    |     |     |
|-----|----|-----|----|-----|-----|
| N   | 5  | 2   | 8  | 1   | 1   |
| <P> | P> | <V> | V> | <H> | <P> |
| <Y> | Y> | <W> | W> | <L> | L>  |

Figure 167: Package marking

## 10.2 Box labels

Here are the box labels used for the IC.

# 11 Legal notices

By using this documentation you agree to our terms and conditions of use. Nordic Semiconductor ASA may change these terms and conditions at any time without notice.

## 11.1 Liability disclaimer

Nordic Semiconductor ASA reserves the right to make changes without further notice to the product to improve reliability, function or design. Nordic Semiconductor ASA does not assume any liability arising out of the application or use of any product or circuits described herein.

Information in this document is believed to be accurate and reliable. Nordic Semiconductor ASA does not give any representations or warranties, expressed or implied, as to the accuracy or completeness of such information and shall have no liability for the consequences of use of such information. If there are any discrepancies, ambiguities or conflicts in Nordic Semiconductor's documentation, the Product Specification prevails.

Nordic Semiconductor ASA reserves the right to make corrections, enhancements, and other changes to this document without notice.

## 11.2 Life support applications

Nordic Semiconductor ASA products are not designed for use in life support appliances, devices, or systems where malfunction of these products can reasonably be expected to result in personal injury.

Nordic Semiconductor ASA customers using or selling these products for use in such applications do so at their own risk and agree to fully indemnify Nordic Semiconductor ASA for any damages resulting from such improper use or sale.

## 11.3 RoHS and REACH statement

Nordic Semiconductor products meet the requirements of Directive 2002/95/EC of the European Parliament and of the Council on the Restriction of Hazardous Substances (RoHS) and the requirements of the REACH regulation (EC 1907/2006) on Registration, Evaluation, Authorization and Restriction of Chemicals.

The SVHC (Substances of Very High Concern) candidate list is continually being updated. Complete hazardous substance reports, material composition reports and latest version of Nordic Semiconductor's REACH statement can be found on our website <http://www.nordicsemi.com>.

## 11.4 Trademarks

All trademarks, service marks, trade names, product names and logos appearing in this documentation are the property of their respective owners.

## 11.5 Copyright notice

© 2018 Nordic Semiconductor ASA. All rights are reserved. Reproduction in whole or in part is prohibited without the prior written permission of the copyright holder.
