LUXEON N

Industry best thermal performance, 2A drive current, compatible with standard optics, 3-stripe footprint

LUXEON N is a high power LED in a 2.5mm x 2.5mm thermally optimized package that supports the highest drive current—up to 2A. This high current capability enables twice the flux in half the size compared to standard 3535 packages while achieving high efficacy. In addition to superior performance delivered over the widest operating range, LUXEON N is compatible with industry standard off-the-shelf optics, minimizing design efforts and costs. The thermally optimized package achieves the lowest thermal resistance at 2°C/W for high drive current system performance. These advantages provide total system design flexibility, making LUXEON N the ideal high power emitter choice for the next generation design of outdoor light sources.

FEATURES AND BENEFITS

Thermally optimized package provides the lowest R_{th} at 2°C/W

Highest drive current of 2A allows 670 lm+ per LED

Low V_f achieves high efficacy of 161 lm/W at 350mA and 110 lm/W at 2000mA

Radiation pattern compatible with standard 3535 high power packages and LUXEON TX

2525 package has half the footprint compared to standard 3535 ensuring fit under off-the-shelf optics

General Product Information

Product Test Conditions

LUXEON N LEDs are tested and binned with a DC drive current of 700mA at a junction temperature, T_j , of 85°C.

Part Number Nomenclature

Part numbers for LUXEON N follow the convention below:

L 1 N 0 – **A A** 7 0 0 0 0 0 0 **B B B** 0

Where:

- A A** – designates nominal ANSI CCT (30=3000K, 40=4000K, 50=5000K, 57=5700K, 65=6500K)
- B B B** – designates minimum luminous flux level at test conditions (see Product Bin and Labeling section)

Therefore, the following part number is used for a LUXEON N 3000K 70CRI with a minimum luminous flux of 290 lumens:

L 1 N 0 – **3 0** 7 0 0 0 0 0 0 **2 9 0** 0

Lumen Maintenance

Please contact your local Sales Representative or Lumileds Technical Solutions Manager for more information about the long-term performance of this product.

Environmental Compliance

Lumileds LLC is committed to providing environmentally friendly products to the solid-state lighting market. LUXEON N is compliant to the European Union directives on the restriction of hazardous substances in electronic equipment, namely the RoHS Directive 2011/65/EU and REACH Regulation (EC) 1907/2006. Lumileds LLC will not intentionally add the following restricted materials to its products: lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls (PBB) or polybrominated diphenyl ethers (PBDE).

6500K	70	280	290	148	671	113	L1N0-6570000000000

Notes for Table 1:

- Lumileds maintains a tolerance of ± 2 on CRI and $\pm 6.5\%$ on luminous flux measurements.
- Typical CRI is approximately 2 points higher than the minimum CRI specified, but this is not guaranteed.

Soldering Temperature	JEDEC 020c 260°C		
Allowable Reflow Cycles	3		
Reverse Voltage ($V_{reverse}$) ^[4]	LUXEON LEDs are not designed to be driven in reverse bias		

Notes for Table 4:

1. Proper current derating must be observed to maintain the junction temperature below the maximum allowable junction temperature.
2. Residual periodic variations due to power conversion from alternating current (AC) to direct current (DC), also called "ripple," with frequencies $\geq 100\text{Hz}$ and amplitude $\leq 15\%$ of the maximum allowable DC forward current are acceptable, assuming the average current throughout each cycle does not exceed the maximum allowable DC forward current at the corresponding maximum junction temperature.
3. Pulsed operation with a peak drive current equal to the stated peak pulsed forward current is acceptable if the pulse on-time is $\leq 5\text{ms}$ per cycle and the duty cycle is $\leq 50\%$.
4. Transient reverse voltages and surge currents due to electrical switching or supply interruptions are acceptable if these events do not last for more than 10ms, the amplitude of the reverse voltage does not exceed 5V and the reverse current is less than 220uA.

Product Bin and Labeling Definitions

Decoding Product Bin Labeling

In the manufacturing of semiconductor products, there are variations in performance around the average values given in the technical datasheet. For this reason, Lumileds bins LED components for luminous flux or radiometric power, color point, peak or dominant wavelength and forward voltage.

LUXEON N LEDs are labeled using a 4-digit alphanumeric CAT code following the format below:

Where:

A B C D

- A** – designates luminous flux bin (example: U=280 to 290 lumens, V=290 to 300 lumens)
- B** – designates correlated color temperature (CCT) bin (1=6500K, 2=5700K, 3=5000K, 5=4000K, 7=3000K)
- C** – designates SDCM bin (example: 5=5-step MacAdam ellipse)
- D** – designates forward voltage bin (example: X=2.65 to 2.85V, Y=2.85 to 3.00V)

Therefore, a LUXEON N with a lumen range of 290 to 300, SDCM bin of 5, CCT bin of 4000K and a forward voltage range of 2.65 to 2.85V has the following CAT code:

V 5 5 X

Luminous Flux Bins

Table 5 lists the standard luminous flux bins for LUXEON N emitters. Although several bins are outlined, product availability in a particular bin varies by production run and by product performance. Not all bins are available in all CCTs.

About Lumileds

Companies developing automotive, mobile, IoT and illumination lighting applications need a partner who can collaborate with them to push the boundaries of light. With over 100 years of inventions and industry firsts, Lumileds is a global lighting solutions company that helps customers around the world deliver differentiated solutions to gain and maintain a competitive edge. As the inventor of Xenon technology, a pioneer in halogen lighting and the leader in high performance LEDs, Lumileds builds innovation, quality and reliability into its technology, products and every customer engagement. Together with its customers, Lumileds is making the world safer, better and more beautiful—with light.
