

- Wide Input Voltage Range:  
+8V to +25V
- Negative Output:  
-2.5V/4A to -15V/1.5A
- Adjustable Output Voltage
- 85% Efficiency
- Remote Sense Capability

The PT6640 series is a positive input to negative output line of Integrated Switching Regulators (ISRs). Designed for general purpose applications, the PT6640 series delivers a negative output voltage at up to 24W. The PT6640 is packaged in a 14-Pin SIP (Single In-line Package) and is available in a surface-mount configuration.

**Standard Application**

C<sub>1</sub> = Required 560µF electrolytic  
C<sub>2</sub> = Required 330µF electrolytic

**Pin-Out Information**

1	Remote Sense
2	Do Not Connect
3	Do Not Connect
4	+V <sub>in</sub>
5	+V <sub>in</sub>
6	+V <sub>in</sub>
7	-V <sub>out</sub>
8	-V <sub>out</sub>
9	-V <sub>out</sub>
10	-V <sub>out</sub>
11	GND
12	GND
13	GND
14	V <sub>out</sub> Adjust

**Ordering Information**

<b>PT6641</b>	= -3.3 Volts
<b>PT6642</b>	= -5.0 Volts
<b>PT6643</b>	= -12.0 Volts
<b>PT6644</b>	= -9.0 Volts
<b>PT6645</b>	= -15.0 Volts
<b>PT6646</b>	= -2.5 Volts

**PT Series Suffix (PT1234X)**

Case/Pin Configuration	Heat Spreader
Vertical Through-Hole	<b>P</b>
Horizontal Through-Hole	<b>D</b>
Horizontal Surface Mount	<b>E</b>

Note: Back surface of product is conducting metal

# PT6640 Series

24W 12V Input Positive to Negative Voltage Converter

## Specifications (continued)

Characteristics ( $T_a = 25^\circ\text{C}$ unless noted)	Symbols	Conditions	PT6640 SERIES			Units
			Min	Typ	Max	
Switching Frequency	$f_o$	$+9\text{V} \leq V_{in} \leq V_{in,max}$ Over $I_o$ range	500	550	600	kHz
Absolute Maximum Operating Temperature Range	$T_a$	Over $V_{in}$ range	-40	—	+85 <sup>(2)</sup>	$^\circ\text{C}$
Storage Temperature	$T_s$	—	-40	—	+125	$^\circ\text{C}$
Mechanical Shock	—	Per Mil-STD-883D, Method 2002.3	—	500	—	G's
Mechanical Vibration	—	Per Mil-STD-883D, Method 2007.2, 20-2000 Hz, soldered in a PC board	—	7.5	—	G's
Weight	—	—	—	14	—	grams

**Notes:** (1) The PT6640 Series requires a 330 $\mu\text{F}$ (output) and 560 $\mu\text{F}$ (input) electrolytic capacitors for proper operation in all applications.  
 (2) See Safe Operating Area curves or call the factory for guidance on thermal derating.

## TYPICAL CHARACTERISTICS

Characteristic Curves @12.0V  $V_{in}$  (See Note A)

Safe Operating Area Curves (See Note B)

**Note A:** Characteristic data has been developed from actual products tested at 25 $^\circ\text{C}$ . This data is considered typical data for the DC-DC Converter.

**Note B:** SOA curves represent operating conditions at which internal components are at or below manufacturer's maximum rated operating temperatures.

## Adjusting the Output Voltage of the PT6640 24W Positive to Negative ISR Series

The negative output voltage of the Power Trends PT6640 series ISRs may be adjusted higher or lower than the factory trimmed pre-set voltage with the addition of a single external resistor. Table 1 gives the allowable adjustment range for each model in the series as  $V_a$  (min) and  $V_a$  (max).

**Adjust Up:** An increase in the negative output voltage is obtained by adding a resistor R2, between pin 14 ( $V_o$  adjust) and pins 7-10 ( $-V_{out}$ ).

**Adjust Down:** Adding a resistor (R1), between pin 14 ( $V_o$  adjust) and pins 11-13 (GND), decreases the output voltage magnitude.

Refer to Figure 1 and Table 2 for both the placement and value of the required resistor, either (R1) or R2 as appropriate.

### Notes:

1. Use only a single 1% resistor in either the (R1) or R2 location. Place the resistor as close to the ISR as possible.
2. Never connect capacitors from  $V_o$  adjust to either GND,  $V_{out}$ , or the Remote Sense pin. Any capacitance added to the  $V_o$  adjust pin will affect the stability of the ISR.
3. If the Remote Sense feature is being used, connecting the resistor (R1) between pin 14 ( $V_o$  adjust) and pin 1 (Remote Sense) can benefit load regulation.
4. The maximum allowed input voltage ( $V_{in}$ ) will change as  $V_{out}$  is adjusted. The difference between the input voltage ( $V_{in}$ ) and the output voltage ( $V_{out}$ ) must not exceed 30V or  $10 \times V_{out}$ , whichever is less. Use one of the following formulas to determine the maximum allowed input voltage for the PT6640.

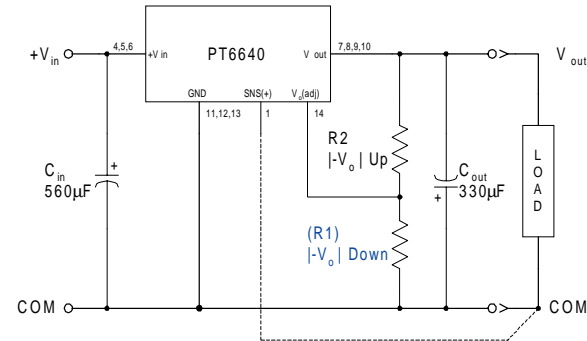

$$\begin{aligned} |V_{out}| & \text{ greater than } 2.73V, \\ V_{in}(\text{max}) & = 30 - |V_{out}| \quad \text{Vdc} \end{aligned}$$

For example, if  $V_{out} = -12V$ ,

$$V_{in}(\text{max}) = 30 - |-12| = 18Vdc$$

$$\begin{aligned} |V_{out}| & \text{ less than } 2.73V, \\ V_{in}(\text{max}) & = 10 \times |V_{out}| \quad \text{Vdc} \end{aligned}$$

Figure 1

The values of (R1) [adjust down], and R2 [adjust up], can also be calculated using the following formulas.

$$(R1) = \frac{R_o (V_o - 1.25)(V_a - 1.25)}{1.25 (V_o - V_a)} - R_s \quad \text{k}\Omega$$

$$R2 = \frac{R_o (V_o - 1.25)}{V_a - V_o} - R_s \quad \text{k}\Omega$$

Where:  $V_o$  = Original  $V_{out}$  (magnitude)  
 $V_a$  = Adjusted  $V_{out}$  (magnitude)  
 $R_o$  = The resistance value in Table 1  
 $R_s$  = The series resistance from Table 1

Table 1

### PT6640 ADJUSTMENT AND FORMULA PARAMETERS

Series Pt #	PT6646	PT6641	PT6642	PT6644	PT6643	PT6645
