**SKYWORKS®**

# Si8220/21

## 0.5 AND 2.5 AMP ISODRIVERS WITH OPTO INPUT (2.5, 3.75, AND 5.0 kV<sub>RMS</sub>)

### Features

- Functional upgrade for HCPL-0302, HCPL-3120, TLP350, and similar opto-drivers
- 60 ns propagation delay max (independent of input current)
- 14x tighter part-to-part matching versus opto-drivers
- 2.5, 3.75, and 5.0 kV<sub>RMS</sub> isolation
- Transient Immunity
  - 30 kV/μs
- Under-voltage lockout protection with hysteresis
- Resistant to temperature and aging effects
- Gate driver supply voltage
  - 6.5 V to 24 V
- AEC-Q100 qualification
- Wide operating range
  - -40 to +125 °C
- RoHS-compliant packages
  - SOIC-8 narrow body
  - SOIC-16 wide body

### Applications

- IGBT/ MOSFET gate drives
- Industrial control systems
- Switch mode power supplies
- UPS systems
- Motor control drives
- Inverters

### Safety Regulatory Approvals

- UL 1577 recognized
  - Up to 5000 Vrms for 1 minute
- CSA component notice 5A approval
  - IEC 60950-1, 61010-1, 60601-1 (reinforced insulation)
- VDE certification conformity
  - IEC 60747-5-5 (VDE 0884 Part 5)
  - EN 60950-1 (reinforced insulation)
- CQC certification approval
  - GB4943.1

### Description

The Si8220/21 is a high-performance functional upgrade for opto-coupled drivers, such as the HCPL-3120 and the HPCL-0302 providing 2.5 A of peak output current. It utilizes Skyworks Solutions' proprietary silicon isolation technology, which provides a choice of 2.5, 3.75, or 5.0 kV<sub>RMS</sub> withstand voltages per UL1577. This technology enables higher performance, reduced variation with temperature and age, tighter part-to-part matching, and superior common-mode rejection compared to opto-isolated drivers. While the input circuit mimics the characteristics of an LED, less drive current is required, resulting in increased efficiency. Propagation delay time is independent of input drive current, resulting in consistently short propagation time, tighter unit-to-unit variation, and greater input circuit design flexibility.

Patent pending

## 4. Functional Description

### 4.1. Theory of Operation

The Si8220/21 is a functional upgrade for popular opto-isolated drivers, such as the Avago HPCL-3120, HPCL-0302, Toshiba TLP350, and others. The operation of an Si8220/21 channel is analogous to that of an opto coupler, except an RF carrier is modulated instead of light. This simple architecture provides a robust isolated data path and requires no special considerations or initialization at start-up. A simplified block diagram for the Si8220/21 is shown in Figure 6.

**Figure 6. Simplified Channel Diagram**

A channel consists of an RF Transmitter and RF Receiver separated by a semiconductor-based isolation barrier. Referring to the Transmitter, input A modulates the carrier provided by an RF oscillator using on/off keying. The Receiver contains a demodulator that decodes the input state according to its RF energy content and applies the result to output B via the output driver. This RF on/off keying scheme is superior to pulse code schemes as it provides best-in-class noise immunity, low power consumption, and better immunity to magnetic fields. See Figure 7 for more details.

**Figure 7. Modulation Scheme**

## 5. Technical Description

### 5.1. Device Behavior

Truth tables for the Si8220/21 are summarized in Table 9.

**Table 9. Si8220/21 Truth Table Summary**

| Cathode | Anode | Diode Current ( $I_F$ ) | $V_{DD}$ | $V_O$ | Comments          |
|---------|-------|-------------------------|----------|-------|-------------------|
| X       | X     | X                       | < UVLO   | L     | Device turned off |
| Hi-Z    | X     | 0                       | > UVLO   | L     | Logic low state   |
| X       | Hi-Z  | 0                       | > UVLO   | L     | Logic low state   |
| GND     | GND   | 0                       | > UVLO   | L     | Logic low state   |
| VF      | VF    | 0                       | > UVLO   | L     | Logic low state   |
| GND1    | VF    | < $I_{F(OFF)}$          | > UVLO   | L     | Logic low state   |
| GND1    | VF    | $\geq I_{F(OFF)}$       | > UVLO   | H     | Logic high state  |

**Note:** "X" = don't care. This truth table assumes  $V_{DD}$  is powered. If  $V_{DD}$  is below UVLO, see "5.3. Under Voltage Lockout (UVLO)" on page 15 for more information.

### 5.2. Device Startup

Output  $V_O$  is held low during power-up until  $V_{DD}$  rises above the UVLO+ threshold for a minimum time period of  $t_{START}$ . Following this, the output is high when the current flowing from anode to cathode is  $> I_{F(ON)}$ . Device startup, normal operation, and shutdown behavior is shown in Figure 8.

**Figure 8. Si8220/21 Operating Behavior ( $I_F \geq I_{F(MIN)}$  when  $V_F \geq V_{F(MIN)}$ )**

### 5.3. Under Voltage Lockout (UVLO)

The UVLO circuit unconditionally drives  $V_O$  low when  $V_{DD}$  is below the lockout threshold. Referring to Figures 9 through 12, upon power up, the Si8220/21 is maintained in UVLO until  $V_{DD}$  rises above  $V_{DD_{UV+}}$ . During power down, the Si8220/21 enters UVLO when  $V_{DD}$  falls below the UVLO threshold plus hysteresis (i.e.,  $V_{DD} \leq V_{DD_{UV+}} - V_{DD_{HYS}}$ ).

Figure 12. Si8220/21 UVLO Response (12.5 V)

## 6. Applications

### 6.1. Power Supply Connections

$V_{SS}$  can be biased at, above, or below ground as long as the voltage on  $V_{DD}$  with respect to  $V_{SS}$  is a maximum of 24 V.  $V_{DD}$  decoupling capacitors should be placed as close to the package pins as possible. The optimum values for these capacitors depend on load current and the distance between the chip and its power source. It is recommended that 0.1 and 10  $\mu$ F bypass capacitors be used to reduce high-frequency noise and maximize performance.

### 6.2. Layout Considerations

It is most important to minimize ringing in the drive path and noise on the  $V_{DD}$  lines. Care must be taken to minimize parasitic inductance in these paths by locating the Si8220/21 as close to the device it is driving as possible. In addition, the  $V_{DD}$  supply and ground trace paths must be kept short. For this reason, the use of power and ground planes is highly recommended. A split ground plane system having separate ground and  $V_{DD}$  planes for power devices and small signal components provides the best overall noise performance.

### 6.3. Power Dissipation Considerations

Proper system design must assure that the Si8220/21 operates within safe thermal limits across the entire load range. The Si8220/21 total power dissipation is the sum of the power dissipated by bias supply current, internal switching losses, and power delivered to the load, as shown in Equation 1.

$$P_D = (V_F)(I_F)(\text{Duty Cycle}) + (V_{DD})(I_{QOUT}) + (C_{int})(V_{DD}^2)(F) + (C_L)(V_{DD}^2)(F)$$

where:

$P_D$  is the total Si8220 device power dissipation (W)

$I_F$  is the diode current (20 mA max)

$V_F$  is the diode anode voltage (2.8 V max)

$I_{QOUT}$  is the driver maximum bias current (5 mA)

$C_{int}$  is the internal parasitic capacitance (370 pF)

$V_{DD}$  is the driver-side supply voltage (24 V max)

F is the switching frequency (Hz)

#### Equation 1.

The maximum allowable power dissipation for the Si8220/21 is a function of the package thermal resistance, ambient temperature, and maximum allowable junction temperature, as shown in Equation 2.

$$P_{Dmax} \leq \frac{T_{jmax} - T_A}{\theta_{ja}}$$

where:

$P_{Dmax}$  is the maximum allowable Si8220/21 power dissipation (W)

$T_{jmax}$  is the Si8220/21 maximum junction temperature (150 °C)

$T_A$  is the ambient temperature (°C)

$\theta_{ja}$  is the Si8220/21 package junction-to-air thermal resistance (125 °C/W)

#### Equation 2.

Substituting values for  $P_{Dmax}$ ,  $T_{jmax}$ ,  $T_A$ , and  $\theta_{ja}$  into Equation 2 results in a maximum allowable total power dissipation of 1.0 W. The maximum allowable load is found by substituting this limit and the appropriate datasheet values from Table 1 on page 4 into Equation 1 and simplifying. The result is Equation 3, where  $V_F = 2.8$  V,  $I_F = 10$  mA, and  $V_{DD} = 18$  V.

$$C_{L(max)} = \frac{1.35 \times 10^{-3}}{F} - 1.85 \times 10^{-10}$$

where:

$C_{L(max)}$  is the maximum load (pF) allowable at switching frequency F

### Equation 3.

A graph of Equation 3 is shown in Figure 13. Each point along the load line in this graph represents the package dissipation-limited value of  $C_L$  for the corresponding switching frequency.

Figure 13. Maximum Load vs. Switching Frequency

## 6.4. Input Circuit Design

Opto driver manufacturers typically recommend the circuits shown in Figures 14 and 15. These circuits are specifically designed to improve opto-coupler input common-mode rejection and increase noise immunity.

Figure 14. Opto Driver Input Circuit

**Figure 15. High CMR Opto Driver Input Circuit**

The optically-coupled driver circuit of Figure 14 turns the LED on when the control input is high. However, internal capacitive coupling from the LED to the power and ground conductors can momentarily force the LED into its off state when the anode and cathode inputs are subjected to a high common-mode transient. The circuit shown in Figure 15 addresses this issue by using a value of R1 sufficiently low to overdrive the LED, ensuring it remains on during an input common-mode transient. Q1 shorts the LED off in the low output state, again increasing common-mode transient immunity. Some opto driver applications also recommend reverse-biasing the LED when the control input is off to prevent coupled noise from energizing the LED.

The Si8220/21 can be used with the input circuits shown in Figures 14 and 15; however, some applications will require increasing the value of R1 in order to limit  $I_F$  to a maximum of 20 mA. The Si8220/21 propagation delay and output drive do not change for values of  $I_F$  between  $I_{F(MIN)}$  and  $I_{F(MAX)}$ . New designs should consider the input circuit configurations of Figure 16, which are more efficient than those of Figures 14 and 15. As shown, S1 represents any suitable switch, such as a BJT or MOSFET, analog transmission gate, processor I/O, etc. Also, note that the Si8220/21 input can be driven from the I/O port of any MCU or FPGA capable of sourcing a minimum of 5 mA (see Figure 16C).

**Figure 16. Si8220/21 Other Input Circuit Configurations**

## 6.5. Parametric Differences between Si8220/21 and HCPL-0302 and HCPL-3120 Opto Drivers

The Si8220/21 is designed to directly replace HCPL-3120 and similar opto drivers. Parametric differences are summarized in Table 10 below.

**Table 10. Parametric Differences of Si8220 vs. HCPL-3120**

| Parameter  | Si8220       | HCPL-3120    | Units |
|--|--------------|--------------|-------|
| Max supply voltage                                   | 24           | 30           | V     |
| ON state forward input current                       | 5 to 20      | 7 to 16      | mA    |
| OFF state input voltage                              | -0.6 to +1.6 | -0.3 to +0.8 | V     |
| Max reverse input voltage                            | 0.5          | -5           | V     |
| UVLO threshold (rising)                              | 5.8 to 13.8  | 11.0 to 13.5 | V     |
| UVLO threshold (falling)                             | 5.5 to 12.8  | 9.7 to 12.0  | V     |
| UVLO hysteresis                                      | 0.28 to 1    | 1.6          | V     |
| Rise/fall time into 10 $\Omega$ in series with 10 nF | 20           | 100          | ns    |

**Table 11. Parametric Differences of Si8221 vs. HCPL-0302**

| Parameter  | Si8221       | HCPL-0302    | Units |
|--|--------------|--------------|-------|
| Max supply voltage                                   | 24           | 30           | V     |
| ON state forward input current                       | 5 to 20      | 7 to 16      | mA    |
| OFF state input voltage                              | -0.6 to +1.6 | -0.3 to +0.8 | V     |
| Max reverse input voltage                            | 0.5          | -5           | V     |
| UVLO threshold (rising)                              | 5.8 to 13.8  | 11.0 to 13.5 | V     |
| UVLO threshold (falling)                             | 5.5 to 12.8  | 9.7 to 12.0  | V     |
| UVLO hysteresis                                      | 0.28 to 1    | 1.6          | V     |
| Rise/fall time into 10 $\Omega$ in series with 10 nF | 20           | 100          | ns    |

### 6.5.1. Supply Voltage and UVLO

The supply voltage of the Si8220/21 is limited to 24 V, and the UVLO voltage thresholds are scaled accordingly. Opto replacement applications should limit their supply voltages to 24 V or less.

### 6.5.2. Input Diode Differences

The Si8220/21 input circuit requires less current and has twice the off-state noise margin compared to opto drivers. However, high CMR opto driver designs that overdrive the LED (see Figure 15) may require increasing the value of R1 to limit input current to 20 mA max. In addition, there is no benefit in driving the Si8220/21 input diode into reverse bias when in the off state. Consequently, opto driver circuits using this technique should either leave the negative bias circuitry unpopulated or modify the circuitry (e.g. add a clamp diode) to ensure that the anode pin of the Si8220/21 is no more than -0.8 V with respect to the cathode when reverse-biased.

# Si8220/21

## 7. Pin Descriptions (Narrow-Body SOIC)

**Figure 17. Pin Configuration**

**Table 12. Pin Descriptions (Narrow-Body SOIC)**

| Pin   | Name     | Description   |
|---|----------|---|
| 1   | NC       | No connect.   |
| 2   | ANODE    | Anode of LED emulator. $V_O$ follows the signal applied to this input with respect to the CATHODE input.  |
| 3   | CATHODE  | Cathode of LED emulator. $V_O$ follows the signal applied to ANODE with respect to this input.  |
| 4   | NC       | No connect.   |
| 5   | $V_{SS}$ | External MOSFET source connection and ground reference for $V_{DD}$ . This terminal is typically connected to ground but may be tied to a negative or positive voltage. |
| 6   | $V_O$    | Output signal. Pins 6 and 7 are connected together internally.  |
| 7   | $V_O$    | Output signal. Pins 6 and 7 are connected together internally.  |
| 8   | $V_{DD}$ | Output-side power supply input referenced to $V_{SS}$ (24 V max).   |
| <p><b>*Note:</b> No Connect. These pins are not internally connected.</p> |          |   |

## 8. Pin Descriptions (Wide-Body SOIC)

**Table 13. Pin Descriptions (Wide-Body SOIC)**

| Pin   | Name     | Description   |
|---|----------|---|
| 1,7   | CATHODE  | Cathode of LED emulator. $V_O$ follows the signal applied to ANODE with respect to this input.  |
| 2,3,5,6,8,<br>10,11,12,<br>14                                       | NC*      | No connect.   |
| 4   | ANODE    | Anode of LED emulator. $V_O$ follows the signal applied to this input with respect to the CATHODE input.  |
| 9,16  | $V_{SS}$ | External MOSFET source connection and ground reference for $V_{DD}$ . This terminal is typically connected to ground but may be tied to a negative or positive voltage. |
| 13  | $V_O$    | Output signal.  |
| 15  | $V_{DD}$ | Output-side power supply input referenced to $V_{SS}$ (24 V max).   |
| * <b>Note:</b> No Connect. These pins are not internally connected. |          |   |

## 9. Ordering Guide

Table 14. Si8220/21 Ordering Guide\*

| New Ordering Part Number (OPN) | Ordering Options    |                                       |              |                   |                |            |
|--------------------------------|---------------------|---------------------------------------|--------------|-------------------|----------------|------------|
|                                | Input Configuration | Peak Output Current (Cross Reference) | UVLO Voltage | Insulation Rating | Temp Range     | Pkg Type   |
| Si8220BB-D-IS                  | Opto input          | 2.5 A (HCPL-3120)                     | 8 V default  | 2.5 kVrms         | -40 to +125 °C | SOIC-8     |

**\*Note:** All packages are RoHS-compliant with peak reflow temperatures of 260 °C according to the JEDEC industry standard classifications and peak solder temperatures.  
All devices are AEC-Q100 qualified.  
“Si” and “SI” are used interchangeably.

## 10. Package Outline: 8-Pin Narrow Body SOIC

Figure 18 illustrates the package details for the Si822x. Table 15 lists the values for the dimensions shown in the illustration.

**Figure 18. 8-pin Small Outline Integrated Circuit (SOIC) Package**

**Table 15. Package Diagram Dimensions**

| Symbol   | Millimeters |          |
|----------|-------------|----------|
|          | Min         | Max      |
| A        | 1.35        | 1.75     |
| A1       | 0.10        | 0.25     |

| <b>Line 2 Marking:</b> | TTTTTT  | Manufacturing date code assigned by assembly contractor.  |
| <b>Line 3 Marking:</b> | Circle = 1.1 mm Diameter<br>Left-Justified  | "e4" Pb-Free Symbol   |

## DOCUMENT CHANGE LIST

### Revision 0.22 to Revision 1.0

- Updated Tables 2, 3, 4, and 5.
- Updated "9. Ordering Guide" .
- Added Device Marking sections.

### Revision 1.0 to Revision 1.1

- Updated Table 5 on page 10.
- Updated Table 8 on page 12.
- Removed introductory text and Figure 17.
- Changed all packages to MSL2A in "9.Ordering Guide" on page 22.
- Updated "12.Package Outline: 16-Pin Wide Body SOIC" on page 25.

### Revision 1.1 to Revision 1.2

- Updated CMTI spec in Table 1 on page 4.
- Updated Figure 1 on page 6.
- Updated Figure 2 on page 6.
- Added Figure 3 on page 7.
- Updated Table 5 on page 10.
- Added note to Table 14 on page 22.

### Revision 1.2 to Revision 1.3

- Added references to AEC-Q100 throughout.
- Changed all 60747-5-2 references to 60747-5-5.
- Added references to CQC throughout.
- Removed all references to moisture sensitivity level.

### Revision 1.3 to Revision 1.4

- Updated Table 14, Ordering Part Numbers.
  - Added Revision D Ordering Part Numbers.
  - Removed all Ordering Part Numbers of previous revisions.

### Revision 1.4 to Revision 1.5

- Updated Table 2 on page 8.
  - Added CQC certificate numbers.
- Updated Table 3 on page 9.
  - Updated Erosion Depth specification.
- Updated Table 8 on page 12.
  - Replaced  $I_O$  with Peak Output Current  $I_{OPK}$ .
  - Added  $T_J$  specification in Table 8 on page 12.
- Updated Figure 14 on page 17.
- Updated Figure 15 on page 18.
- Updated Figure 16 on page 18.
- Updated "9.Ordering Guide" on page 22.
  - Updated AEC-Q100 note.
