

THE DATASHEET OF SA5534ANG

NE5534, SA5534, SE5534, NE5534A, SA5534A, SE5534A

Single Low Noise Operational Amplifier

The NE/SA/SE5534/5534A are single high-performance low noise operational amplifiers. Compared to other operational amplifiers, such as TL083, they show better noise performance, improved output drive capability, and considerably higher small-signal and power bandwidths.

This makes the devices especially suitable for application in high quality and professional audio equipment, in instrumentation and control circuits and telephone channel amplifiers. The op amps are internally compensated for gain equal to, or higher than, three. The frequency response can be optimized with an external compensation capacitor for various applications (unity gain amplifier, capacitive load, slew rate, low overshoot, etc.).

Features

- Small-Signal Bandwidth: 10 MHz
- Output Drive Capability: 600 Ω , 10 V_{RMS} at V_S = ± 18 V
- Input Noise Voltage: 4 nV/ $\sqrt{\text{Hz}}$
- DC Voltage Gain: 100000
- AC Voltage Gain: 6000 at 10 kHz
- Power Bandwidth: 200 kHz
- Slew Rate: 13 V/ μs
- Large Supply Voltage Range: ± 3.0 to ± 20 V
- Pb-Free Packages are Available

Applications

- Audio Equipment
- Instrumentation and Control Circuits
- Telephone Channel Amplifiers
- Medical Equipment

DEVICE MARKING INFORMATION

See general marking information in the device marking section on page 8 of this data sheet.

ORDERING INFORMATION

See detailed ordering and shipping information in the package dimensions section on page 8 of this data sheet.

NE5534, SA5534, SE5534, NE5534A, SA5534A, SE5534A

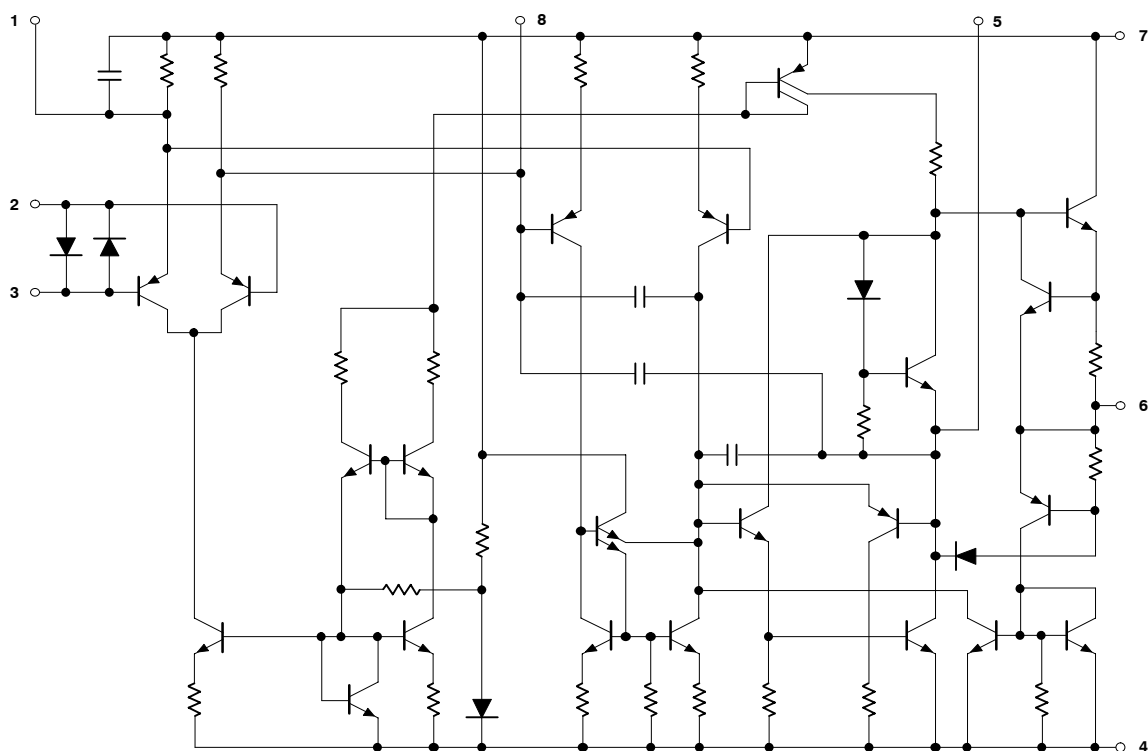

Figure 1. Equivalent Schematic

MAXIMUM RATINGS

Rating	Symbol	Value	Unit
Supply Voltage	V_S	± 22	V
Input Voltage	V_{IN}	$\pm V_{Supply}$	V
Differential Input Voltage (Note 1)	V_{DIFF}	± 0.5	V
Operating Temperature Range NE SA SE	T_{amb}	0 to +70 -40 to +85 -55 to +125	$^{\circ}C$
Storage Temperature Range	T_{stg}	-65 to +150	$^{\circ}C$
Junction Temperature	T_j	150	$^{\circ}C$
Power Dissipation at 25 $^{\circ}C$	P_D	N Package D Package 1150 750	mW
Thermal Resistance, Junction-to-Ambient	$R_{\theta JA}$	N Package D Package 130 158	$^{\circ}C/W$
Output Short-Circuit Duration (Note 2)	-	Indefinite	-
Lead Soldering Temperature (10 sec max)	T_{slid}	230	$^{\circ}C$

Stresses exceeding Maximum Ratings may damage the device. Maximum Ratings are stress ratings only. Functional operation above the Recommended Operating Conditions is not implied. Extended exposure to stresses above the Recommended Operating Conditions may affect device reliability.

1. Diodes protect the inputs against overvoltage. Therefore, unless current-limiting resistors are used, large currents will flow if the differential input voltage exceeds 0.6 V. Maximum current should be limited to ± 10 mA.
2. Output may be shorted to ground at $V_S = \pm 15$ V, $T_{amb} = 25^{\circ}C$. Temperature and/or supply voltages must be limited to ensure dissipation rating is not exceeded.

NE5534, SA5534, SE5534, NE5534A, SA5534A, SE5534A

DC ELECTRICAL CHARACTERISTICS ($T_{amb} = 25^{\circ}\text{C}$; $V_S = \pm 15\text{ V}$, unless otherwise noted.) (Notes 3, 4 and 5)

Characteristic	Symbol	Test Conditions	NE/SA5534/5534A			SE5534/5534A			Unit
