

**THE DATASHEET OF
SN75LPE185DW**

SN75LPE185 LOW-POWER MULTIPLE RS-232 DRIVERS/RECEIVERS WITH ENABLE

SLLS256F – DECEMBER 1996 – REVISED NOVEMBER 2001

- **Single-Chip RS-232 Interface for IBM™ PC-Compatible Serial Port**
- **Designed to Transmit and Receive 4-μs Pulses (Equivalent to 256 kbit/s)**
- **Standby Power Is Less Than 750 μW Maximum**
- **Wide Supply-Voltage Range . . . 4.75 V to 15 V**
- **Driver Output Slew Rates Are Internally Controlled to 30 V/μs Maximum**
- **RS-232 Bus-Pin ESD Protection Exceeds:**
– 15 kV, Human-Body Model
- **Receiver Input Hysteresis . . . 1000 mV Typical**
- **Three Drivers and Five Receivers Meet or Exceed the Requirements of TIA/EIA-232-F and ITU v.28 Standards**
- **Complements the SN75LP196**
- **One Receiver Remains Active During WAKE-UP Mode (100 μA Maximum)**
- **Matches Flow-Through Pinout of Industry-Standard SN75185, SN75C185, and SN75LP185, With Additional Control Pins**
- **Package Options Include Plastic Shrink Small-Outline (DB), Small-Outline (DW), and Thin Shrink Small-Outline (PW) Packages, and Standard Plastic (NT) DIPs**

DB, DW, NT, OR PW PACKAGE

NC – No internal connection

description

The SN75LPE185 is a low-power bipolar device containing three drivers and five receivers, with 15-kV ESD protection on the bus pins, with respect to each other. Bus pins are defined as those pins that tie directly to the serial-port connector, including GND. The pinout matches the flow-through design of the industry-standard SN75185, SN75C185, and SN75LP185, with the addition of four pins for control signals. The flow-through pinout of the device allows easy interconnection of the universal asynchronous receiver/transmitter (UART) and serial-port connector of the IBM™ PC compatibles. The SN75LPE185 provides a rugged, low-cost solution for this function, with the combination of bipolar processing and 15-kV ESD protection.

The SN75LPE185 has an internal slew-rate control to provide a maximum rate of change in the output signal of 30 V/μs. The driver output swing is clamped at ±6 V to enable the higher data rates associated with this device and to reduce EMI emissions. Although the driver outputs are clamped, the outputs can handle voltages up to ±15 V without damage.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

IBM is a trademark of International Business Machines Corporation.

PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

SN75LPE185 LOW-POWER MULTIPLE RS-232 DRIVERS/RECEIVERS WITH ENABLE

SLLS256F – DECEMBER 1996 – REVISED NOVEMBER 2001

description (continued)

The device has flexible control options for power management when the serial port is inactive. A common disable for all of the drivers and receivers is provided with the active-low enable (\overline{EN}) input. The mode-control (MODE) input selects between the STANDBY and WAKE-UP modes. With a low-level input on MODE and a high-level input on \overline{EN} , one receiver remains active, while the remaining drivers and receivers are disabled to implement the WAKE-UP mode. With a high-level input on both MODE and \overline{EN} , all drivers and receivers are disabled to implement the STANDBY mode. The outputs of the drivers are in the high-impedance state when the device is powered off. To ensure the outputs of the receivers are in a known output level (as listed in the *Application Information* section of this data sheet) when the device is powered off, in STANDBY mode, or in WAKE-UP mode, external pullup/pulldown circuitry must be provided. All the logic inputs accept 3.3-V or 5-V input signals.

The SN75LPE185 complies with the requirements of TIA/EIA-232-F and ITU v.28 standards. These standards are for data interchange between a host computer and peripheral at signaling rates up to 20 kbit/s. The switching speeds of the SN75LPE185 support rates up to 256 kbit/s.

The SN75LPE185 is characterized for operation from 0°C to 70°C.

AVAILABLE OPTIONS

| T _A | PACKAGED DEVICES | | | |
|----------------|---|----------------------------------|---|------------------------|
| | PLASTIC SHRINK SMALL OUTLINE (DB) | PLASTIC SMALL OUTLINE (DW) | PLASTIC THIN SHRINK SMALL OUTLINE (PW) | PLASTIC DIP (NT) |
| 0°C to 70°C | SN75LPE185DBR | SN75LPE185DW | SN75LPE185PWR | SN75LPE185NT |

The DB and PW packages are only available taped and reeled. The DW package is also available taped and reeled. Add the suffix R to device type (e.g., SN75LPE185DWR).

LOW-POWER MULTIPLE RS-232 DRIVERS/RECEIVERS WITH ENABLE

SLLS256F – DECEMBER 1996 – REVISED NOVEMBER 2001

absolute maximum ratings over operating free-air temperature range (unless otherwise noted)†

| | | |
|---|-------|----------------------------|
| Positive supply voltage range: V_{CC} (see Note 1) | | -0.5 V to 7 V |
| V_{DD} (see Note 1) | | -0.5 V to 15 V |
| Negative supply voltage range, V_{SS} (see Note 1) | | 0.5 V to -15 V |
| Receiver input voltage range, V_I (RA) | | -30 V to 30 V |
| Driver input voltage range, V_I (DA, \overline{EN} , MODE) | | -0.5 V to $V_{CC} + 0.4$ V |
| Receiver output voltage range, V_O (RY) | | -0.5 V to 6 V |
| Driver output voltage range, V_O (DY) | | -15 V to 15 V |
| Electrostatic discharge, bus pins: Human-body model (see Note 2) | | Class 3: 15 kV |
| Machine model (see Note 2) | | Class 3: 500 V |
| Electrostatic discharge, all pins: Human-body model (see Note 2) | | Class 3: 5 kV |
| Machine model (see Note 2) | | Class 3: 200 V |
| Package thermal impedance, θ_{JA} (see Note 3): DB package | | 63°C/W |
| (see Note 3): DW package | | 46°C/W |
| (see Note 4): NT package | | 67°C/W |
| (see Note 3): PW package | | 88°C/W |
| Lead temperature 1,6 mm (1/16 inch) from case for 10 seconds | | 260°C |
| Storage temperature range, T_{stg} | | -65°C to 150°C |

† Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

- NOTES:
1. All voltage values are with respect to network ground terminal unless otherwise noted.
 2. Per MIL-STD-883 Method 3015.7
 3. The package thermal impedance is calculated in accordance with JESD 51-7.
 4. The package thermal impedance is calculated in accordance with JESD 51-3.

recommended operating conditions

| | | MIN | NOM | MAX | UNIT | |
|----------|--------------------------------|----------------------------|-----|------|------|---|
| V_{CC} | Supply voltage (see Note 5) | 4.75 | 5 | 5.25 | V | |
| V_{DD} | Supply voltage | 9 | 12 | 15 | V | |
| V_{SS} | Supply voltage | -9 | -12 | -15 | V | |
| V_{IH} | High-level input voltage | DA, \overline{EN} , MODE | | 2 | V | |
| V_{IL} | Low-level input voltage | DA, \overline{EN} , MODE | | 0.8 | V | |

SN75LPE185 LOW-POWER MULTIPLE RS-232 DRIVERS/RECEIVERS WITH ENABLE

SLLS256F – DECEMBER 1996 – REVISED NOVEMBER 2001

PARAMETER MEASUREMENT INFORMATION

- NOTES: A. The pulse generator has the following characteristics:
 For $C_L < 1000$ pF: $t_w = 4 \mu\text{s}$, PRR = 250 kbit/s, $Z_O = 50 \Omega$, $t_r = t_f < 50$ ns.
 For $C_L = 2500$ pF: $t_w = 8 \mu\text{s}$, PRR = 125 kbit/s, $Z_O = 50 \Omega$, $t_r = t_f < 50$ ns.
 B. C_L includes probe and jig capacitance.

fault protection during power down

Diodes placed in series with the V_{DD} and V_{SS} leads protect the SN75LPE185 in the fault condition, in which the device outputs are shorted to $\pm 15\text{ V}$ and the power supplies are at low voltage and provide low-impedance paths to ground.

Figure 8. Power-Supply Protection to Meet Power-Off Fault Conditions of TIA/EIA-232-F

SN75LPE185 LOW-POWER MULTIPLE RS-232 DRIVERS/RECEIVERS WITH ENABLE

SLLS256F – DECEMBER 1996 – REVISED NOVEMBER 2001

APPLICATION INFORMATION

WAKE-UP mode

While in the WAKE-UP mode, all the drivers and receivers of the SN75LPE185 device are in the high-impedance state, except for receiver 5, which can be used as a ring indicator function. In this mode, the current drawn from the power supplies is low, to conserve power.

In today's PCs, board designers are becoming more concerned about power consumption. The flexibility of the SN75LPE185 during WAKE-UP mode allows the designer to operate the device at auxiliary power-supply voltages below specified levels. The SN75LPE185 functions properly during WAKE-UP mode, using the following power-supply conditions:

- (a) $V_{CC} = 4.75\text{ V}$, $V_{DD} = 9\text{ V}$, and $V_{SS} = -9\text{ V}$ (data-sheet specifications)
- (b) $V_{CC} = 5\text{ V}$, $V_{DD} = 5\text{ V}$, and $V_{SS} = -5\text{ V}$
- (c) $V_{CC} = 5\text{ V}$, $V_{DD} = \text{open}$, and $V_{SS} = \text{open}$
- (d) $V_{CC} = 5\text{ V}$, $V_{DD} = 5\text{ V}$, and V_{SS} is shorted to the most negative supply.

Condition (a) describes the minimum supply voltages necessary for the device to comply fully to specifications.

Conditions (b) and (d) describe the condition where a -5-V supply is not available during auxiliary power. In this case, V_{SS} must be shorted to the most negative supply (i.e., GND or a voltage source close to, but below GND).

Condition (c) states V_{DD} and V_{SS} power supplies can be shut off.

In all cases, GND is understood to be 0 V, and the power-supply voltages should never exceed the absolute maximum ratings.

POST OFFICE BOX 655303 • DALLAS, TEXAS 75265

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.
