1. OVERVIEW

CLAA035QVA01 is 3.5" (8.76cm) color TFT-LCD (Thin Film Transistor Liquid Crystal Display) module composed of LCD panel, driver ICs , control circuit , and backlight.

The 3.5" screen produces 320 ×RGB×240 resolution image. By applying 8 bits digital data, 16.7 million color images are displayed on the 3.5" diagonal screen. The Driver for LED backlight is not included in this module.

General specifications are summarized in the following table:

ITEM	ECIFICATION
Display Area (mm)	70.08(W) x 52.56(H)
Number of Pixels	320 ×3(H) ×240(V)
Pixel Pitch (mm)	0.219(H) ×0.219(V)
Color Pixel Arrangement	RGB vertical strip
Display Mode	Normally White
Number of color	16.7M
Viewing Direction	6 o'clock
Brightness(cd/m ²)	250(typ)
Viewing Angle CR ≥ 10	120 degree (H) , 100 degree (V)
Electrical Interface	Digital 24bits RGB
Power Consumption(W)	0.43 (Typ.)
Outline Dimension (mm)	76.9(H) × 63.9(V) × 3.3(D)
weight(g)	34g
BL unit	6pcs LED
Surface Treatment	Anti-Glare , Surface hardness: 3H

2. ABSOLUTE MAXIMUM RATINGS

The following values are maximum operation conditions. If exceeded, it may cause faulty operation or damage.

(GND=AVSS=0V)

ITEM	SYMBOL	MIN.	MAX.	UNIT	NOTE
Power Supply Voltage for Digital	VCC	-0.3	4	V	
Power Supply Voltage for Analog	AVDD	-0.3	7	V

*1 Definition of contrast ratio :

1) Contrast Ratio (CR) = (White) Luminance of ON ÷ (Black) Luminance of OFF

Fig.1 Measuring point

***2 Definition of Center Luminance & Luminance Uniformity :**

- 1) Center Luminance (L) = Measure the luminance on the center point as figure 7-1 #5 point
 - 2) Measure maximum luminance and minimum luminance on the 9 points as figure 7-1 (#1~#9 point). Luminance Uniformity is calculated with the following formula :
- $$L = [L \Delta (\text{MIN}) / L (\text{MAX})] \times 100\%$$

***3 Definition of Response Time. (White - Black)**

The response time is defined as the time interval between the 10% and 90% amplitudes.

8. RELIABILITY TEST CONDITIONS

(1) Temperature and Humidity

TEST ITEMS	CONDITIONS
HIGH TEMPERATURE OPERATION	75° C ; 240Hrs
HIGH TEMPERATURE STORAGE	85° C ; 240Hrs
HIGH TEMPERATURE AND HIGH HUMIDITY OPERATION	60° C ; 90%RH ; 240Hrs
LOW TEMPERATURE OPERATION	-30° C ; 240Hrs
LOW TEMPERATURE STORAGE	-40° C ; 240Hrs
THERMAL SHOCK (No operation)	-30° C (0.5Hr)~85° C (0.5Hr) 200 CYCLE

(2) Shock & Vibration

TEST ITEMS	CONDITIONS
SHOCK (NON-OPERATION)	<ul style="list-style-type: none"> ● Shock level: 980m/s²(equal to 100G). ● Waveform: half sinusoidal wave,6ms. ● Number of shocks: one shock input in each direction of three mutually perpendicular axes for a total of three shock inputs.
VIBRATION (NON-OPERATION)	<ul style="list-style-type: none"> ● Frequency range:8~33.3Hz ● Stoke : 1.3 mm ● Vibration: sinusoidal wave, perpendicular axis(both x,z axis: 2Hrs , and y axis: 4Hrs). ● Sweep: 2.9G,33.3 Hz -400 Hz ● Cycle: 15 min

(3) ESD

TEST ITEM	CONDITIONS	Note
ESD	150pF , 330Ω , ±8Kv & ±15kV air & contact test	(1)
	200pF , 0Ω , ±200V contact test	(2)

[NOTE] : Measure point :(1)LCD glass and metal bezel (2)IF connector pins

(4) Judgment standard

The judgment of the above test should be made as follow:

Pass : Normal display image with no obvious non-uniformity and no line defect. Partial transformation of the module parts should be ignored.

Fail : No display image, obvious non-uniformity, or line defects.

9. HANDLING PRECAUTIONS FOR TFT-LCD MODULE

Please pay attention to the followings in handling- TFT-LCD products :

(A) ASSEMBLY PRECAUTION

- (1) Please use the mounting hole on the module side in installing and do not beading or wrenching LCD in assembling. And please do not drop, bend or twist LCD module in handling.
- (2) Please design display housing in accordance with the following guide lines.
 - (2.1) Housing case must be destined carefully so as not to put stresses on LCD all sides and not to wrench module. The stresses may cause non-uniformity even if there is no non-uniformity statically.
 - (2.2) Keep sufficient clearance between LCD module back surface and housing when the LCD module is mounted. Approximately 1.0 mm of the clearance in the design is recommended taking into account the tolerance of LCD module thickness and mounting structure height on the housing.
 - (2.3) When some parts, such as, FPC cable and ferrite plate, are installed underneath the LCD module, still sufficient clearance is required, such as 0.5mm. This clearance is, especially, to be reconsidered when the additional parts are implemented for EMI countermeasure.
 - (2.4) Design the inverter location and connector position carefully so as not to give stress to lamp cable, or not to interface the LCD module by the lamp cable.
 - (2.5) Keep sufficient clearance between LCD module and the others parts, such as inverter and speaker so as not to interface the LCD module. Approximately 1.0mm of the clearance in the design is recommended.
- (3) Please do not push or scratch LCD panel surface with any-thing hard. And do not soil LCD panel surface by touching with bare hands. (Polarizer film, surface of LCD panel is easy to be flawed.)
- (4) Please do not press any parts on the rear side such as source TCP, gate TCP, control circuit board and FPCs during handling LCD module. If pressing rear part is unavoidable, handle the LCD module with care not to damage them.
- (5) Please wipe out LCD panel surface with absorbent cotton or soft cloth in case of it being soiled.
- (6) Please wipe out drops of adhesives like saliva and water on LCD panel surface immediately. They might damage to cause panel surface variation and color change.
- (7) Please do not take a LCD module to pieces and reconstruct it. Resolving and reconstructing modules may cause them not to work well.
- (8) Please do not touch metal frames with bare hands and soiled gloves. A color change of the metal frames can happen during a long preservation of soiled LCD modules.
- (9) Please pay attention to handling lead wire of backlight so that it is not tugged in connecting wit inverter.

(B) OPERATING PRECAUTIONS

- (1) Please be sure to turn off the power supply before connecting and disconnecting signal input cable.
- (2) Please do not change variable resistance settings in LCD module. They are adjusted to the most suitable value. If they are changed, it might happen LCD does not satisfy the characteristics specification.
- (3) Please consider that LCD backlight takes longer time to become stable of radiation characteristics in low temperature than in room temperature.
- (4) A condensation might happen on the surface and inside of LCD module in case of sudden change of ambient temperature.
- (5) Please pay attention to displaying the same pattern for very long time. Image might stick on LCD. If then, time going on can make LCD work well.

- (6) Please obey the same caution descriptions as ones that need to pay attention to ordinary electronic parts.

(C) PRECAUTIONS WITH ELECTROSTATICS

- (1) This LCD module uses CMOS-IC on circuit board and TFT-LCD panel, and so it is easy to be affected by electrostatics. Please be careful with electrostatics by the way of your body connecting to the ground and so on.
- (2) Please remove protection film very slowly on the surface of LCD module to prevent from electrostatics occurrence.

(D) STORAGE PRECAUTIONS

- (1) When you store LCDs for a long time, it is recommended to keep the temperature between 0°C-40°C without the exposure of sunlight and to keep the humidity less than 90%RH.
- (2) Please do not leave the LCDs in the environment of high humidity and high temperature such as 60°C 90%RH.
- (3) Please do not leave the LCDs in the environment of low temperature; below -20°C.

(E) SAFETY PRECAUTIONS

- (1) When you waste LCDs, it is recommended to crush damaged or unnecessary LCDs into pieces and wash them off with solvents such as acetone and ethanol, which should later be burned.
- (2) If any liquid leaks out of a damaged-glass cell and comes in contact with the hands, wash off thoroughly with soap and water.

(F) OTHERS

- (1) A strong incident light into LCD panel might cause display characteristics' changing inferior because of polarizer film, color filter, and other materials becoming inferior. Please do not expose LCD module direct sunlight and strong UV rays.
- (2) Please pay attention to a panel side of LCD module not to contact with other materials in preserving it alone.
- (3) For the packaging box, please pay attention to the followings:
 - (3.1) Packaging box and inner case for LCD are designed to protect the LCDs from the damage or scratching during transportation. Please do not open except picking LCDs up from the box.
 - (3.2) Please do not pile them up more than 5 boxes. (They are not designed so.) And please do not turn over.
 - (3.3) Please handle packaging box with care not to give them sudden shock and vibrations. And also please do not throw them up.
 - (3.4) Packing box and inner case for LCDs are made of cardboard. So please pay attention not to get them wet. (Such like keeping them in high humidity or wet place can occur getting them wet.)
