

**THE DATASHEET OF  
RP40-4815DG**

# Features

- 2:1 input voltage range
- 1.6kVDC isolation
- UL certified
- Efficiency up to 90%
- Six-sided continuous shield
- Available as power module (RPM40-G)

# Regulated Converter

# RECOM DC/DC Converter

## RP40-G

40 Watt  
2" x 2"

Single, Dual and Triple Output

UL60950-1 certified

## Description

The RP40-G series DC/DC converters are certified to UL 60950-1 and to cUL 60950-1. This makes them ideal for all telecom and industrial applications where approved safety standards are required. The industry standard 2" x 2" package meets military standards for thermal shock and vibration tolerance.

### Notes:

- Note1: Maximum values at nominal input voltage and full load of standard type  
 Note2: Max. Cap load is tested at minimum Input and constant resistive load

## Model Numbering

### Notes:

- Note3: add suffix "-HC" for premounted Heat-sink with clips

### Ordering Examples

- RP40-2405SG = 24V Input, 5V Output, Single  
 RP40-4812DG-HC = 48V Input, ±12V Output, Dual, Heat-sink premounted

**Notes:**

- Note4: For the single output: Maximum output deviation is 10% inclusive of remote sense and trim. If remote sense is not being used, the +Sense should be connected to its corresponding +Vout and likewise the -Sense should be connected to its corresponding -Vout
- Note5: Simulated source impedance of 12µH. 12µH inductor in series with +Vin
- Note6: The dual and triple output required a minimum loading on the output to maintain specified regulation. Operation under no-load condition will not damage these devices, however they may not meet all listed specification
- Note7: The pin voltage is referenced to -Vin pin

**OUTPUT VOLTAGE TRIMMING**

**Output Voltage Trimming**

Some single/dual output Powerline converters offer the feature of trimming the output voltage over a certain range around the nominal value by using external trim resistors. No general equation can be given for calculating the trim resistors, but the following trim tables give typical values for choosing these trimming resistors. If voltages between the given trim points are required, extrapolate between the two nearest given values to work out the resistor required or use a variable resistor to set the output voltage. Output can be externally trimmed by using the method shown below.
