

**THE DATASHEET OF  
CY96F386RSCPMC-GS211UJE2**

# F<sup>2</sup>MC-16FX 16-bit Proprietary Microcontroller

CY96380 series is based on Cypress advanced 16FX architecture (16-bit with instruction pipeline for RISC-like performance). The CPU uses the same instruction set as the established 16LX series - thus allowing for easy migration of 16LX Software to the new 16FX products. 16FX improvements compared to the previous generation include significantly improved performance - even at the same operation frequency, reduced power consumption and faster start-up time.

For highest processing speed at optimized power consumption an internal PLL can be selected to supply the CPU with up to 56MHz operation frequency from an external 4MHz resonator. The result is a minimum instruction cycle time of 17.8ns going together with excellent EMI behavior. An on-chip clock modulation circuit significantly reduces emission peaks in the frequency spectrum. The emitted power is minimized by the on-chip voltage regulator that reduces the internal CPU voltage. A flexible clock tree allows to select suitable operation frequencies for peripheral resources independent of the CPU speed.

## Features

### Technology

- 0.18  $\mu$ m CMOS

### CPU

- F<sup>2</sup>MC-16FX CPU
- Up to 56 MHz internal, 17.8 ns instruction cycle time
- Optimized instruction set for controller applications (bit, byte, word and long-word data types; 23 different addressing modes; barrel shift; variety of pointers)
- 8-byte instruction execution queue
- Signed multiply (16-bit  $\cdot$  16-bit) and divide (32-bit/16-bit) instructions available

### System Clock

- On-chip PLL clock multiplier (x1 - x25, x1 when PLL stop)
- 3 MHz - 16 MHz external crystal oscillator clock (maximum frequency when using ceramic resonator depends on Q-factor).
- Up to 56 MHz external clock for devices with fast clock input feature
- 32-100 kHz subsystem quartz clock
- 100 kHz/2 MHz internal RC clock for quick and safe startup, oscillator stop detection, watchdog
- Clock source selectable from main- and subclock oscillator (part number suffix "W") and on-chip RC oscillator, independently for CPU and 2 clock domains of peripherals.
- Low Power Consumption - 13 operating modes : (different Run, Sleep, Timer modes, Stop mode)
- Clock modulator

### On-chip Voltage Regulator

- Internal voltage regulator supports reduced internal MCU voltage, offering low EMI and low power consumption figures

### Low Voltage Reset

- Reset is generated when supply voltage is below minimum.

### Code Security

- Protects ROM content from unintended read-out

### Memory Patch Function

- Replaces ROM content
- Can also be used to implement embedded debug support

### DMA

- Automatic transfer function independent of CPU, can be assigned freely to resources

### Interrupts

- Fast Interrupt processing
- 8 programmable priority levels
- Non-Maskable Interrupt (NMI)

### Timers

- Three independent clock timers (23-bit RC clock timer, 23-bit Main clock timer, 17-bit Sub clock timer)
- Watchdog Timer

## CAN

- Supports CAN protocol version 2.0 part A and B
- ISO16845 certified
- Bit rates up to 1 Mbit/s
- 32 message objects
- Each message object has its own identifier mask
- Programmable FIFO mode (concatenation of message objects)
- Maskable interrupt
- Disabled Automatic Retransmission mode for Time Triggered CAN applications
- Programmable loop-back mode for self-test operation

## USART

- Full duplex USARTs (SCI/LIN)
- Wide range of baud rate settings using a dedicated reload timer
- Special synchronous options for adapting to different synchronous serial protocols
- LIN functionality working either as master or slave LIN device

## I<sup>2</sup>C

- Up to 400 kbps
- Master and Slave functionality, 8-bit and 10-bit addressing

## A/D Converter

- SAR-type
- 10-bit resolution
- Signals interrupt on conversion end, single conversion mode, continuous conversion mode, stop conversion mode, activation by software, external trigger or reload timer

## A/D Converter Reference Voltage switch

- 2 independent positive A/D converter reference voltages available

## Reload Timers

- 16-bit wide
- Prescaler with  $1/2^1$ ,  $1/2^2$ ,  $1/2^3$ ,  $1/2^4$ ,  $1/2^5$ ,  $1/2^6$  of peripheral clock frequency
- Event count function

## Free Running Timers

- Signals an interrupt on overflow, supports timer clear upon match with Output Compare (0, 4), Prescaler with  $1$ ,  $1/2^1$ ,  $1/2^2$ ,  $1/2^3$ ,  $1/2^4$ ,  $1/2^5$ ,  $1/2^6$ ,  $1/2^7$ ,  $1/2^8$  of peripheral clock frequency

## Input Capture Units

- 16-bit wide
- Signals an interrupt upon external event
- Rising edge, falling edge or rising & falling edge sensitive

## Output Compare Units

- 16-bit wide
- Signals an interrupt when a match with 16-bit I/O Timer occurs
- A pair of compare registers can be used to generate an output signal.

## Programmable Pulse Generator

- 16-bit down counter, cycle and duty setting registers
- Interrupt at trigger, counter borrow and/or duty match
- PWM operation and one-shot operation
- Internal prescaler allows  $1$ ,  $1/4$ ,  $1/16$ ,  $1/64$  of peripheral clock as counter clock and Reload timer overflow as clock input
- Can be triggered by software or reload timer

## Stepper Motor Controller

- Stepper Motor Controller with integrated high current output drivers
- Four high current outputs for each channel
- Two synchronized 8/10-bit PWMs per channel
- Internal prescaling for PWM clock:  $1$ ,  $1/4$ ,  $1/5$ ,  $1/6$ ,  $1/8$ ,  $1/10$ ,  $1/12$ ,  $1/16$  of peripheral clock
- Separate power supply for high current output drivers

## LCD Controller

- LCD controller with up to 4 COM × 65 SEG
- Internal or external voltage generation
- Duty cycle: Selectable from options:  $1/2$ ,  $1/3$  and  $1/4$
- Fixed  $1/3$  bias
- Programmable frame period
- Clock source selectable from three options (peripheral clock, subclock or RC oscillator clock)
- On-chip drivers for internal divider resistors or external divider resistors
- On-chip data memory for display
- LCD display can be operated in Timer Mode
- Blank display: selectable
- All SEG, COM and V pins can be switched between general and specialized purposes
- External divided resistors can be also used to shut off the current when LCD is deactivated

### Sound Generator

- 8-bit PWM signal is mixed with tone frequency from 16-bit reload counter
- PWM clock by internal prescaler: 1, 1/2, 1/4, 1/8 of peripheral clock

### Real Time Clock

- Can be clocked either from sub oscillator (devices with part number suffix "W"), main oscillator or from the RC oscillator
- Facility to correct oscillation deviation of Sub clock or RC oscillator clock (clock calibration)
- Read/write accessible second/minute/hour registers
- Can signal interrupts every half second/second/minute/hour/day
- Internal clock divider and prescaler provide exact 1s clock

### External Interrupts

- Edge sensitive or level sensitive
- Interrupt mask and pending bit per channel
- Each available CAN channel RX has an external interrupt for wake-up
- Selected USART channels SIN have an external interrupt for wake-up

### Non Maskable Interrupt

- Disabled after reset
- Once enabled, can not be disabled other than by reset.
- Level high or level low sensitive
- Pin shared with external interrupt 0.

### External Bus Interface

- 8-bit or 16-bit bidirectional data
- Up to 24-bit addresses
- 6 chip select signals
- Multiplexed address/data lines
- Non-multiplexed address/data lines
- Wait state request
- External bus master possible
- Timing programmable

### Alarm Comparator

- Monitors an external voltage and generates an interrupt in case of a voltage lower or higher than the defined thresholds
- Threshold voltages defined externally or generated internally
- Status is readable, interrupts can be masked separately

### I/O Ports

- Virtually all external pins can be used as general purpose I/O
- All push-pull outputs (except when used as I2C SDA/SCL line)
- Bit-wise programmable as input/output or peripheral signal
- Bit-wise programmable input enable
- Bit-wise programmable input levels: Automotive / CMOS-Schmitt trigger / TTL
- Bit-wise programmable pull-up resistor
- Bit-wise programmable output driving strength for EMI optimization

### Package

- 120-pin plastic LQFP

### Flash Memory

- Supports automatic programming, Embedded Algorithm
- Write/Erase/Erase-Suspend/Resume commands
- A flag indicating completion of the algorithm
- Number of erase cycles: 10,000 times
- Data retention time: 20 years
- Erase can be performed on each sector individually
- Sector protection
- Flash Security feature to protect the content of the Flash
- Low voltage detection during Flash erase

**Pin Function Description (3 of 3)**

| Pin name        | Feature      | Description   |
|-----------------|--------------|---|
| V <sub>n</sub>  | LCD          | LCD voltage references  |
| V <sub>CC</sub> | Supply       | Power supply  |
| V <sub>SS</sub> | Supply       | Power supply  |
| WOT             | RTC          | Real Timer clock output                                       |
| WRHX            | External bus | External bus High byte write strobe output                    |
| WRLX/WRX        | External bus | External bus Low byte / Word write strobe output              |
| X0              | Clock        | Oscillator input  |
| X0A             | Clock        | Subclock Oscillator input (only for devices with suffix "W")  |
| X1              | Clock        | Oscillator output   |
| X1A             | Clock        | Subclock Oscillator output (only for devices with suffix "W") |

## 5. Pin Circuit Type

### Pin Circuit Types (1 of 2)

| LQM120     |                            |
|------------|----------------------------|
| Pin No.    | Circuit Type <sup>*1</sup> |
| 1          | Supply                     |
| 2          | F                          |
| 3 to 11    | J                          |
| 12,13      | N                          |
| 14 to 21   | K                          |
| 22         | Supply                     |
| 23 to 24   | G                          |
| 25         | Supply                     |
| 26 to 29   | K                          |
| 30,31      | Supply                     |
| 32 to 35   | K                          |
| 36 to 40   | M                          |
| 41,42      | Supply                     |
| 43 to 52   | M                          |
| 53,54      | Supply                     |
| 55 to 59   | M                          |
| 60, 61     | Supply                     |
| 62 to 64   | C                          |
| 65, 66     | A                          |
| 67         | Supply                     |
| 68,69      | B <sup>*2</sup>            |
| 68,69      | H <sup>*3</sup>            |
| 70         | E                          |
| 71 to 89   | J                          |
| 90 to 91   | Supply                     |
| 92 to 112  | J                          |
| 113 to 116 | L                          |

**Pin Circuit Types (2 of 2)**

| LQM120     |                            |
|------------|----------------------------|
| Pin No.    | Circuit Type <sup>*1</sup> |
| 117 to 119 | H                          |
| 120        | Supply                     |

- \*1: See 6. "I/O Circuit Type" for details on the I/O circuit types
- \*2: Devices with suffix "W"
- \*3: Devices without suffix "W"

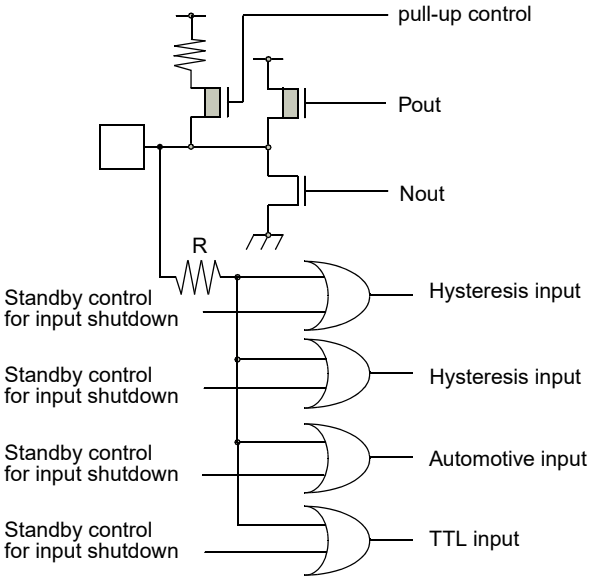

6. I/O Circuit Type

| Type | Circuit | Remarks   |
|------|---------|---|
| A    |         | <p>High-speed oscillation circuit:</p> <ul style="list-style-type: none"> <li>• Programmable between oscillation mode (external crystal or resonator connected to X0/X1 pins) and Fast external Clock Input (FCI) mode (external clock connected to X0 pin)</li> <li>• Programmable feedback resistor = approx. <math>2 * 0.5 \text{ M}\Omega</math>. Feedback resistor is grounded in the center when the oscillator is disabled or in FCI mode</li> </ul> |
| B    |         | <p>Low-speed oscillation circuit:</p> <ul style="list-style-type: none"> <li>• Programmable feedback resistor = approx. <math>2 * 5 \text{ M}\Omega</math>. Feedback resistor is grounded in the center when the oscillator is disabled</li> </ul>  |
| C    |         | <ul style="list-style-type: none"> <li>• Mask ROM and EVA device: CMOS Hysteresis input pin</li> <li>• Flash device: CMOS input pin</li> </ul>  |
| E    |         | <ul style="list-style-type: none"> <li>• CMOS Hysteresis input pin</li> <li>• Pull-up resistor value: approx. <math>50 \text{ k}\Omega</math></li> </ul>  |

| Type | Circuit  | Remarks  |
|------|--|--|
| F    |   | <ul style="list-style-type: none"> <li>• Power supply input protection circuit</li> </ul>  |
| G    |   | <ul style="list-style-type: none"> <li>• A/D converter ref+ (AVRH/AVRH2) power supply input pin with protection circuit</li> <li>• Flash devices do not have a protection circuit against VCC for pins AVRH/AVRH2</li> <li>• Devices without AVRH reference switch do not have an analog switch for the AVRL pin</li> </ul>  |
| H    |  | <ul style="list-style-type: none"> <li>• CMOS level output (programmable <math>I_{OL} = 5\text{ mA}</math>, <math>I_{OH} = -5\text{ mA}</math> and <math>I_{OL} = 2\text{ mA}</math>, <math>I_{OH} = -2\text{ mA}</math>)</li> <li>• 2 different CMOS hysteresis inputs with input shutdown function</li> <li>• Automotive input with input shutdown function</li> <li>• TTL input with input shutdown function</li> <li>• Programmable pull-up resistor: 50 k<math>\Omega</math> approx.</li> </ul> |

| Type | Circuit  | Remarks   |
|------|--|---|
| J    |  <p>pull-up control</p> <p>Pout</p> <p>Nout</p> <p>R</p> <p>Standby control for input shutdown</p> <p>Hysteresis input</p> <p>Hysteresis input</p> <p>Automotive input</p> <p>TTL input</p> <p>SEG, COM output</p>                 | <ul style="list-style-type: none"> <li>• CMOS level output (programmable <math>I_{OL} = 5\text{ mA}</math>, <math>I_{OH} = -5\text{ mA}</math> and <math>I_{OL} = 2\text{ mA}</math>, <math>I_{OH} = -2\text{ mA}</math>)</li> <li>• 2 different CMOS hysteresis inputs with input shutdown function</li> <li>• Automotive input with input shutdown function</li> <li>• TTL input with input shutdown function</li> <li>• Programmable pull-up resistor: 50 k<math>\Omega</math> approx.</li> <li>• SEG or COM output</li> </ul>                   |
| K    |  <p>pull-up control</p> <p>Pout</p> <p>Nout</p> <p>R</p> <p>Standby control for input shutdown</p> <p>Hysteresis input</p> <p>Hysteresis input</p> <p>Automotive input</p> <p>TTL input</p> <p>Analog input</p> <p>SEG output</p> | <ul style="list-style-type: none"> <li>• CMOS level output (programmable <math>I_{OL} = 5\text{ mA}</math>, <math>I_{OH} = -5\text{ mA}</math> and <math>I_{OL} = 2\text{ mA}</math>, <math>I_{OH} = -2\text{ mA}</math>)</li> <li>• 2 different CMOS hysteresis inputs with input shutdown function</li> <li>• Automotive input with input shutdown function</li> <li>• TTL input with input shutdown function.</li> <li>• Programmable pull-up resistor: 50 k<math>\Omega</math> approx.</li> <li>• Analog input</li> <li>• SEG output</li> </ul> |

| Type | Circuit  | Remarks   |
|------|--|---|
| L    |  <p>The diagram for Type L shows a pull-up control circuit connected to a node. This node is also connected to the gates of two transistors, Pout and Nout. A resistor R is connected between this node and ground. The node is also connected to four OR gates. Each OR gate has one input from a 'Standby control for input shutdown' signal and another input from a specific input type: Hysteresis input, Automotive input, TTL input, and Analog input. The output of the OR gates is connected to the gates of two more transistors, Hysteresis input and Vx input. The output of the Hysteresis input transistor is connected to the Hysteresis input. The output of the Vx input transistor is connected to the Vx input. The output of the Nout transistor is connected to the SEG output.</p> | <ul style="list-style-type: none"> <li>• CMOS level output (programmable <math>I_{OL} = 5\text{ mA}</math>, <math>I_{OH} = -5\text{ mA}</math> and <math>I_{OL} = 2\text{ mA}</math>, <math>I_{OH} = -2\text{ mA}</math>)</li> <li>• 2 different CMOS hysteresis inputs with input shutdown function</li> <li>• Automotive input with input shutdown function</li> <li>• TTL input with input shutdown function</li> <li>• Programmable pull-up resistor: 50 k<math>\Omega</math> approx.</li> <li>• Analog input</li> <li>• Vx input</li> <li>• SEG output</li> </ul>        |
| M    |  <p>The diagram for Type M shows a pull-up control circuit connected to a node. This node is also connected to the gates of two transistors, Pout and Nout. A resistor R is connected between this node and ground. The node is also connected to four OR gates. Each OR gate has one input from a 'Standby control for input shutdown' signal and another input from a specific input type: Hysteresis input, Automotive input, and TTL input. The output of the OR gates is connected to the gates of two more transistors, Hysteresis input and Vx input. The output of the Hysteresis input transistor is connected to the Hysteresis input. The output of the Vx input transistor is connected to the Vx input. The output of the Nout transistor is connected to the SEG output.</p>              | <ul style="list-style-type: none"> <li>• CMOS level output (programmable <math>I_{OL} = 5\text{ mA}</math>, <math>I_{OH} = -5\text{ mA}</math> and <math>I_{OL} = 2\text{ mA}</math>, <math>I_{OH} = -2\text{ mA}</math>, <math>I_{OL} = 30\text{ mA}</math>, <math>I_{OH} = -30\text{ mA}</math>)</li> <li>• 2 different CMOS hysteresis inputs with input shutdown function</li> <li>• Automotive input with input shutdown function</li> <li>• TTL input with input shutdown function</li> <li>• Programmable pull-up resistor: 50 k<math>\Omega</math> approx.</li> </ul> |

| Type | Circuit   | Remarks   |
|------|---|---|
| N    |  | <ul style="list-style-type: none"> <li>• CMOS level output (<math>I_{OL} = 3\text{ mA}</math>, <math>I_{OH} = -3\text{ mA}</math>)</li> <li>• 2 different CMOS hysteresis inputs with input shutdown function</li> <li>• Automotive input with input shutdown function</li> <li>• TTL input with input shutdown function</li> <li>• Programmable pull-up resistor: 50 k<math>\Omega</math> approx.</li> </ul> |

RAM availability depending on the device

External Bus end address<sup>\*2</sup>

\*1: Unused GPR banks can be used as RAM area  
 \*2: For External Bus end address and RAMSTART/END addresses, please refer to the table on the next page.  
 \*3: For EVA device, RAMSTART0 depends on the configuration of the emulated device.  
 \*4: For details about USER ROM area, see the 9."User ROM Memory Map for Flash Devices" and 10."User ROM Memory Map for Mask Rom Devices" on the following pages.

The External Bus area and DMA area are only available if the device contains the corresponding resource.  
 The available RAM and ROM area depends on the device.

## 11. Serial Programming Communication Interface

### USART Pins for Flash Serial Programming (MD[2:0] = 010, Serial Communication Mode)

| CY96F38x   |              |                 |
|------------|--------------|-----------------|
| Pin Number | USART Number | Normal Function |
| LQFP-120   |              |                 |
| 8          | USART0       | SIN0            |
| 9          |              | SOT0            |
| 10         |              | SCK0            |
| 3          | USART1       | SIN1            |
| 4          |              | SOT1            |
| 5          |              | SCK1            |
| 56         | USART2       | SIN2            |
| 57         |              | SOT2            |
| 58         |              | SCK2            |

Note: If a Flash programmer and its software needs to use a handshaking pin, Cypress suggests to the tool vendor to support at least port P00\_1 on pin 88.

If handshaking is used by the tool but P00\_1 is not available in customer's application, Cypress suggests to the customer to check the tool manual or to contact the tool vendor for alternative handshaking pins.

## 12. I/O Map

### I/O Map CY96(F)38x (Sheet 1 of 30)

Note: Any write access to reserved addresses in the I/O map should not be performed. A read access to a reserved address results in reading 'X'.

Registers of resources which are described in this table, but which are not supported by the device, should also be handled as "Reserved".

### 13. Interrupt Vector Table

**Interrupt Vector Table CY96(F)38x (Sheet 1 of 3)**

| Vector Number | Offset in Vector Table | Vector Name | Cleared by DMA | Index in ICR to Program | Description                    |
|---------------|------------------------|-------------|----------------|-------------------------|--------------------------------|

## 14. Handling Devices

Special care is required for the following when handling the device:

- Latch-up prevention
- Unused pins handling
- External clock usage
- Unused sub clock signal
- Notes on PLL clock mode operation
- Power supply pins ( $V_{CC}/V_{SS}$ )
- Crystal oscillator circuit
- Turn on sequence of power supply to A/D converter and analog inputs
- Pin handling when not using the A/D converter
- Notes on energization
- Stabilization of power supply voltage
- SMC power supply pins
- Serial communication

### 14.1 Latch-up prevention

CMOS IC chips may suffer latch-up under the following conditions:

- A voltage higher than  $V_{CC}$  or lower than  $V_{SS}$  is applied to an input or output pin.
- A voltage higher than the rated voltage is applied between  $V_{CC}$  pins and  $V_{SS}$  pins.
- The  $AV_{CC}$  power supply is applied before the  $V_{CC}$  voltage.

Latch-up may increase the power supply current dramatically, causing thermal damages to the device.

For the same reason, extra care is required to not let the analog power-supply voltage ( $AV_{CC}$ ,  $AVRH$ ) exceed the digital power-supply voltage.

### 14.2 Unused pins handling

Unused input pins can be left open when the input is disabled (corresponding bit of Port Input Enable register  $PIER = 0$ ).

Leaving unused input pins open when the input is enabled may result in misbehavior and possible permanent damage of the device. They must therefore be pulled up or pulled down through resistors. To prevent latch-up, those resistors should be more than  $2\text{ k}\Omega$ .

Unused bidirectional pins can be set either to the output state and be then left open, or to the input state with either input disabled or external pull-up/pull-down resistor as described above.

### 14.3 External clock usage

The permitted frequency range of an external clock depends on the oscillator type and configuration. See AC Characteristics for detailed modes and frequency limits. Single and opposite phase external clocks must be connected as follows:

#### 1. Single phase external clock

- When using a single phase external clock, X0 pin must be driven and X1 pin left open.

## 2. Opposite phase external clock

- When using an opposite phase external clock, X1 (X1A) must be supplied with a clock signal which has the opposite phase to the X0 (X0A) pins.

### 14.4 Unused sub clock signal

If the pins X0A and X1A are not connected to an oscillator, a pull-down resistor must be connected on the X0A pin and the X1A pin must be left open.

### 14.5 Notes on PLL clock mode operation

If the PLL clock mode is selected and no external oscillator is operating or no external clock is supplied, the microcontroller attempts to work with the free oscillating PLL. Performance of this operation, however, cannot be guaranteed.

### 14.6 Power supply pins ( $V_{CC}/V_{SS}$ )

It is required that all  $V_{CC}$ -level as well as all  $V_{SS}$ -level power supply pins are at the same potential. If there is more than one  $V_{CC}$  or  $V_{SS}$  level, the device may operate incorrectly or be damaged even within the guaranteed operating range.

$V_{CC}$  and  $V_{SS}$  must be connected to the device from the power supply with lowest possible impedance.

As a measure against power supply noise, it is required to connect a bypass capacitor of about 0.1  $\mu\text{F}$  between  $V_{CC}$  and  $V_{SS}$  as close as possible to  $V_{CC}$  and  $V_{SS}$  pins.

### 14.7 Crystal oscillator and ceramic resonator circuit

Noise at X0, X1 pins or X0A, X1A pins might cause abnormal operation. It is required to provide bypass capacitors with shortest possible distance to X0, X1 pins and X0A, X1A pins, crystal oscillator (or ceramic resonator) and ground lines, and, to the utmost effort, that the lines of oscillation circuit do not cross the lines of other circuits.

It is highly recommended to provide a printed circuit board art work surrounding X0, X1 pins and X0A, X1A pins with a ground area for stabilizing the operation.

It is highly recommended to evaluate the quartz/MCU or resonator/MCU system at the quartz or resonator manufacturer, especially when using low-Q resonators at higher frequencies.

### 14.8 Turn on sequence of power supply to A/D converter and analog inputs

It is required to turn the A/D converter power supply ( $AV_{CC}$ , AVRH, AVRL) and analog inputs (ANn) on after turning the digital power supply ( $V_{CC}$ ) on.

It is also required to turn the digital power off after turning the A/D converter supply and analog inputs off. In this case, the voltage must not exceed AVRH or  $AV_{CC}$  (turning the analog and digital power supplies simultaneously on or off is acceptable).

### 14.9 Pin handling when not using the A/D converter

It is required to connect the unused pins of the A/D converter as  $AV_{CC} = V_{CC}$ ,  $AV_{SS} = AVRH = AVRL = V_{SS}$ .

### 14.10 Notes on Power-on

To prevent malfunction of the internal voltage regulator, supply voltage profile while turning the power supply on should be slower than 50  $\mu\text{s}$  from 0.2 V to 2.7 V.

### 14.11 Stabilization of power supply voltage

If the power supply voltage varies acutely even within the operation safety range of the  $V_{CC}$  power supply voltage, a malfunction may occur. The  $V_{CC}$  power supply voltage must therefore be stabilized. As stabilization guidelines, the power supply voltage must be stabilized in such a way that  $V_{CC}$  ripple fluctuations (peak to peak value) in the commercial frequencies (50 to 60 Hz) fall within 10% of the standard  $V_{CC}$  power supply voltage and the transient fluctuation rate becomes 0.1  $\text{V}/\mu\text{s}$  or less in instantaneous fluctuation for power supply switching.

#### **14.12 SMC power supply pins**

All  $DV_{SS}$  pins must be set to the same level as the  $V_{SS}$  pins.

The  $DV_{CC}$  power supply level can be set independently of the  $V_{CC}$  power supply level. However note that the SMC I/O pin state is undefined if  $DV_{CC}$  is powered on and  $V_{CC}$  is below 3 V. To avoid this, we recommend to always power  $V_{CC}$  before  $DV_{CC}$ .

#### **14.13 Serial communication**

There is a possibility to receive wrong data due to noise or other causes on the serial communication.

Therefore, design a printed circuit board so as to avoid noise.

Consider receiving of wrong data when designing the system. For example apply a checksum and retransmit the data if an error occurs.

## 15. Electrical Characteristics

### 15.1 Absolute Maximum Ratings

| Parameter                                | Symbol               | Rating         |                | Unit | Remarks   |
|--|----------------------|----------------|----------------|------|---|

\*1: AV<sub>CC</sub> and V<sub>CC</sub> must be set to the same voltage. It is required that AV<sub>CC</sub> does not exceed V<sub>CC</sub> and that the voltage at the analog inputs does not exceed AV<sub>CC</sub> neither when the power is switched on.

\*2: V<sub>I</sub> and V<sub>O</sub> should not exceed (D)V<sub>CC</sub> + 0.3 V. V<sub>I</sub> should also not exceed the specified ratings. However if the maximum current to/from a input is limited by some means with external components, the I<sub>CLAMP</sub> rating supersedes the V<sub>I</sub> rating. Input/output voltages of high current ports depend on DV<sub>CC</sub>. Input/output voltages of standard ports depend on V<sub>CC</sub>.

- \*3:
- Applicable to all general purpose I/O pins (Pnn\_m) except I/O pins with SEG or COM functionality.
  - Use within recommended operating conditions.
  - Use at DC voltage (current)
  - The +B signal should always be applied a limiting resistance placed between the +B signal and the microcontroller.
  - The value of the limiting resistance should be set so that when the +B signal is applied the input current to the microcontroller pin does not exceed rated values, either instantaneously or for prolonged periods.
  - Note that when the microcontroller drive current is low, such as in the power saving modes, the +B input potential may pass through the protective diode and increase the potential at the VCC pin, and this may affect other devices.
  - Note that if a +B signal is input when the microcontroller power supply is off (not fixed at 0 V), the power supply is provided from the pins, so that incomplete operation may result.

- Note that if the +B input is applied during power-on, the power supply is provided from the pins and the resulting supply voltage may not be sufficient to operate the Power reset (except devices with persistent low voltage reset in internal vector mode).
- No +B signal must be applied to any LCD I/O pin (including unused SEG/COM pins).

- Sample recommended circuits:

- \*4: The maximum permitted power dissipation depends on the ambient temperature, the air flow velocity and the thermal conductance of the package on the PCB.

The actual power dissipation depends on the customer application and can be calculated as follows:

$$P_D = P_{IO} + P_{INT}$$

$$P_{IO} = \sum (V_{OL} * I_{OL} + V_{OH} * I_{OH}) \text{ (IO load power dissipation, sum is performed on all IO ports)}$$

$$P_{INT} = V_{CC} * (I_{CC} + I_A) \text{ (internal power dissipation)}$$

$I_{CC}$  is the total core current consumption into  $V_{CC}$  as described in the “DC characteristics” and depends on the selected operation mode and clock frequency and the usage of functions like Flash programming or the clock modulator.

$I_A$  is the analog current consumption into  $AV_{CC}$ .

- \*5: Worst case value for a package mounted on single layer PCB at specified  $T_A$  without air flow.
- \*6: Please contact Cypress for reliability limitations when using under these conditions.
- \*7: If  $DV_{CC}$  is powered before  $V_{CC}$ , then SMC I/O pins state is undefined. To avoid this, we recommend to always power  $V_{CC}$  before  $DV_{CC}$ . It is not necessary to set  $V_{CC}$  and  $DV_{CC}$  to the same value.

**WARNING:** Semiconductor devices can be permanently damaged by application of stress (voltage, current, temperature, etc.) in excess of absolute maximum ratings. Do not exceed these ratings.

## 15.2 Recommended Operating Conditions

| Parameter                    | Symbol            | Value |          |     | Unit    | Remarks  |
|------------------------------|-------------------|-------|----------|-----|---------|--|
|                              |                   | Min   | Typ      | Max |         |  |
| Power supply voltage         | $V_{CC}, DV_{CC}$ | 3.0   | -        | 5.5 | V       |  |
| Smoothing capacitor at C pin | $C_S$             | 3.5   | 4.7 - 10 | 15  | $\mu F$ | Use a low inductance capacitor (for example X7R ceramic capacitor) |

**WARNING:** The recommended operating conditions are required in order to ensure the normal operation of the semiconductor device. All of the device's electrical characteristics are warranted when the device is operated within these ranges. Always use semiconductor devices within their recommended operating condition ranges. Operation outside these ranges may adversely affect reliability and could result in device failure. No warranty is made with respect to uses, operating conditions, or combinations not represented on the data sheet. Users considering application outside the listed conditions are advised to contact their representatives beforehand.

\*: The power supply current is measured with a 4MHz external clock connected to the Main oscillator and a 32 kHz external clock connected to the Sub oscillator. See chapter "Standby mode and voltage regulator control circuit" of the Hardware Manual for further details about voltage regulator control.

15.4 AC Characteristics

Source Clock Timing

( $T_A = -40^{\circ}\text{C}$  to  $125^{\circ}\text{C}$ ,  $V_{CC} = AV_{CC} = 3.0\text{V}$  to  $5.5\text{V}$ ,  $DV_{CC} = 3.0\text{V}$  to  $5.5\text{V}$ ,  $V_{SS} = AV_{SS} = DV_{SS} = 0\text{V}$ )

| Parameter               | Symbol             | Pin      | Value |        |         | Unit          | Remarks   |
|-------------------------|--------------------|----------|-------|--------|---------|---------------|---|
|                         |                    |          | Min   | Typ    | Max     |               |   |
| Clock frequency         | $f_C$              | X0, X1   | 3     | -      | 16      | MHz           | When using a crystal oscillator, PLL off  |
|                         |                    |          | 0     | -      | 16      | MHz           | When using an opposite phase external clock, PLL off  |
|                         |                    |          | 3.5   | -      | 16      | MHz           | When using a crystal oscillator or opposite phase external clock, PLL on  |
| Clock frequency         | $f_{FCI}$          | X0       | 0     | -      | 56      | MHz           | When using a single phase external clock in "Fast Clock Input mode" (not available in CY96F386xxA and CY96F387xxA), PLL off |
|                         |                    |          | 3.5   | -      | 56      | MHz           | When using a single phase external clock in "Fast Clock Input mode" (not available in CY96F386xxA and CY96F387xxA), PLL on  |
| Clock frequency         | $f_{CL}$           | X0A, X1A | 32    | 32.768 | 100     | kHz           | When using an oscillation circuit   |
|                         |                    |          | 0     | -      | 100     | kHz           | When using an opposite phase external clock   |
|                         |                    | X0A      | 0     | -      | 50      | kHz           | When using a single phase external clock  |
| Clock frequency         | $f_{CR}$           | -        | 50    | 100    | 200     | kHz           | When using slow frequency of RC oscillator  |
|                         |                    |          | 1     | 2      | 4       | MHz           | When using fast frequency of RC oscillator  |
| PLL Clock frequency     | $f_{CLKVCO}$       | -        | 64    | -      | 200     | MHz           | Permitted VCO output frequency of PLL (CLKVCO)  |
| PLL Phase Jitter        | $T_{PSKEW}$        | -        | -     | -      | $\pm 5$ | ns            | For CLKMC (PLL input clock) $\geq 4$ MHz  |
| Input clock pulse width | $P_{WH}, P_{WL}$   | X0,X1    | 8     | -      | -       | ns            | Duty ratio is about 30% to 70%  |

External Reset Timing

( $T_A = -40^{\circ}\text{C}$  to  $125^{\circ}\text{C}$ ,  $V_{CC} = AV_{CC} = 3.0\text{V}$  to  $5.5\text{V}$ ,  $DV_{CC} = 3.0\text{V}$  to  $5.5\text{V}$ ,  $V_{SS} = AV_{SS} = DV_{SS} = 0\text{V}$ )

| Parameter        | Symbol     | Pin  | Value |     |     | Unit | Remarks |
|------------------|------------|------|-------|-----|-----|------|---------|
|                  |            |      | Min   | Typ | Max |      |         |
| Reset input time | $t_{RSTL}$ | RSTX | 500   | -   | -   | ns   |         |

**Power On Reset Timing**

( $T_A = -40^{\circ}\text{C}$  to  $125^{\circ}\text{C}$ ,  $V_{CC} = AV_{CC} = 3.0\text{V}$  to  $5.5\text{V}$ ,  $DV_{CC} = 3.0\text{V}$  to  $5.5\text{V}$ ,  $V_{SS} = AV_{SS} = DV_{SS} = 0\text{V}$ )

| Parameter          | Symbol    | Pin | Value |     |     | Unit | Remarks |
|--------------------|-----------|-----|-------|-----|-----|------|---------|
|                    |           |     | Min   | Typ | Max |      |         |
| Power on rise time | $t_R$     | Vcc | 0.05  | -   | 30  | ms   |         |
| Power off time     | $t_{OFF}$ | Vcc | 1     | -   | -   | ms   |         |

If the power supply is changed too rapidly, a power-on reset may occur. We recommend a smooth startup by restraining voltages when changing the power supply voltage during operation, as shown in the figure below.

External Input Timing

( $T_A = -40^{\circ}\text{C}$  to  $125^{\circ}\text{C}$ ,  $V_{CC} = AV_{CC} = 3.0\text{V}$  to  $5.5\text{V}$ ,  $DV_{CC} = 3.0\text{V}$  to  $5.5\text{V}$ ,  $V_{SS} = AV_{SS} = DV_{SS} = 0\text{V}$ )

| Parameter         | Symbol                 | Pin       | Condition | Value   |     | Unit | Used Pin input function           |
|-------------------|------------------------|-----------|-----------|---|-----|------|-----------------------------------|
|                   |                        |           |           | Min   | Max |      |                                   |
| Input pulse width | $t_{INH}$<br>$t_{INL}$ | INTn(_R)  | —         | 200   | —   | ns   | External Interrupt                |

- Notes:
- AC characteristic in CLK synchronized mode.
  - $C_L$  is the load capacity value of pins when testing.
  - Depending on the used machine clock frequency, the maximum possible baud rate can be limited by some parameters. These parameters are shown in “CY96300 Super series Hardware Manual”
  - $t_{CLKP1}$  is the cycle time of the peripheral clock 1 (CLKP1), Unit : ns

\*1: Parameter N depends on  $t_{SCYCI}$  and can be calculated as follows:

- if  $t_{SCYCI} = 2 * k * t_{CLKP1}$ , then  $N = k$ , where  $k$  is an integer  $> 2$
- if  $t_{SCYCI} = (2 * k + 1) * t_{CLKP1}$ , then  $N = k + 1$ , where  $k$  is an integer  $> 1$

Examples:

| $t_{scyci}$                    | N   |
|--------------------------------|-----|
| $4 * t_{CLKP1}$                | 2   |
| $5 * t_{CLKP1}, 6 * t_{CLKP1}$ | 3   |
| $7 * t_{CLKP1}, 8 * t_{CLKP1}$ | 4   |
| ...                            | ... |

\*1 : R, C : Pull-up resistor and load capacitor of the SCL and SDA lines.

\*2 : The maximum t<sub>HDDAT</sub> have only to be met if the device does not stretch the "L" width (t<sub>LOW</sub>) of the SCL signal.

\*3 : A Fast-mode I<sup>2</sup>C-bus device can be used in a Standard-mode I<sup>2</sup>C-bus system, but the requirement t<sub>SUDAT</sub> ≥ 250 ns must then be met.

\*4 : For use at over 100 kHz, set the peripheral clock 1 to at least 6 MHz.

Note: The accuracy gets worse as  $|\text{AVRH} - \text{AVRL}|$  becomes smaller.

**Definition of A/D Converter Terms**

Resolution: Analog variation that is recognized by an A/D converter.

Total error: Difference between the actual value and the ideal value. The total error includes zero transition error, full-scale transition error and nonlinearity error.

Nonlinearity error: Deviation between a line across zero-transition line (“00 0000 0000” <--> “00 0000 0001”) and full-scale transition line (“11 1111 1110” <--> “11 1111 1111”) and actual conversion characteristics.

Differential nonlinearity error: Deviation of input voltage, which is required for changing output code by 1 LSB, from an ideal value.

Zero reading voltage: Input voltage which results in the minimum conversion value.

Full scale reading voltage: Input voltage which results in the maximum conversion value.

$$\text{Total error of digital output "N"} = \frac{V_{NT} - \{1 \text{ LSB} \times (N - 1) + 0.5 \text{ LSB}\}}{1 \text{ LSB}} \text{ [LSB]}$$

$$1 \text{ LSB} = (\text{Ideal value}) \frac{AVRH - AVRL}{1024} \text{ [V]}$$

N: A/D converter digital output value

$$V_{OT} (\text{Ideal value}) = AVRL + 0.5 \text{ LSB [V]}$$

$$V_{FST} (\text{Ideal value}) = AVRH - 1.5 \text{ LSB [V]}$$

$V_{NT}$  : A voltage at which digital output transitions from (N - 1) to N.

Nonlinearity error

Differential nonlinearity error

$$\text{Nonlinearity error of digital output } N = \frac{V_{NT} - \{1 \text{ LSB} \times (N - 1) + V_{OT}\}}{1 \text{ LSB}} \text{ [LSB]}$$

$$\text{Differential nonlinearity error of digital output } N = \frac{V_{(N+1)T} - V_{NT}}{1 \text{ LSB}} - 1 \text{ LSB [LSB]}$$

$$1 \text{ LSB} = \frac{V_{FST} - V_{OT}}{1022} \text{ [V]}$$

N : A/D converter digital output value

V<sub>OT</sub> : Voltage at which digital output transits from “000<sub>H</sub>” to “001<sub>H</sub>.”

V<sub>FST</sub> : Voltage at which digital output transits from “3FE<sub>H</sub>” to “3FF<sub>H</sub>.”

**Notes on A/D Converter Section**

- <sup>2</sup>About the external impedance of the analog input and the sampling time of the A/D converter (with sample and hold circuit):  
If the external impedance is too high to keep sufficient sampling time, the analog voltage charged to the internal sample and hold capacitor is insufficient, adversely affecting A/D conversion precision.

**analog input circuit model:**

**Reference value:**

- C = 8.5 pF (Max)

To satisfy the A/D conversion precision standard, the relationship between the external impedance and minimum sampling time must be considered and then either the resistor value and operating frequency must be adjusted or the external impedance must be decreased so that the sampling time ( $T_{\text{samp}}$ ) is longer than the minimum value. Usually, this value is set to  $7\tau$ , where  $\tau = RC$ . If the external input resistance ( $R_{\text{ext}}$ ) connected to the analog input is included, the sampling time is expressed as follows:

$$T_{\text{samp}} [\text{min}] = 7 \times (R_{\text{ext}} + 2.6 \text{ k}\Omega) \times C \text{ for } 4.5 \leq AV_{\text{CC}} \leq 5.5$$

$$T_{\text{samp}} [\text{min}] = 7 \times (R_{\text{ext}} + 12.1 \text{ k}\Omega) \times C \text{ for } 3.0 \leq AV_{\text{CC}} \leq 4.5$$

If the sampling time cannot be sufficient, connect a capacitor of about 0.1  $\mu\text{F}$  to the analog input pin.

- <sup>2</sup> About the error

The accuracy gets worse as  $|AV_{\text{RH}} - AV_{\text{RL}}|$  becomes smaller.

CILCR:LVL[3:0] are the low voltage detector level select bits of the CILCR register.

Levels 10 to 15 are not used in this device.

For correct detection, the slope of the voltage level must satisfy  $\left| \frac{dV}{dt} \right| \leq 0.004 \frac{V}{\mu\text{s}}$ .

Faster variations are regarded as noise and may not be detected.

The functional operation of the MCU is guaranteed down to the minimum low voltage detection level of  $V_{CC} = 2.7\text{ V}$ . The electrical characteristics however are only valid in the specified range (usually down to 3.0 V).

### Low Voltage Detector Operation

In the following figure, the occurrence of a low voltage condition is illustrated. For a detailed description of the reset and startup behavior, please refer to the corresponding hardware manual chapter.

**15.8 FLASH Memory Program/erase Characteristics**

( $T_A = -40^{\circ}\text{C}$  to  $105^{\circ}\text{C}$ ,  $V_{CC} = AV_{CC} = 3.0\text{V}$  to  $5.5\text{V}$ ,  $DV_{CC} = 3.0\text{V}$  to  $5.5\text{V}$ ,  $V_{SS} = AV_{SS} = DV_{SS} = 0\text{V}$ )

| Parameter                            | Value  |       |       | Unit  | Remarks  |
|--------------------------------------|--------|-------|-------|-------|--|
|                                      | Min    | Typ   | Max   |       |  |

| θ      | 0°         | —    | 8°    |

**NOTES**

1. ALL DIMENSIONS ARE IN MILLIMETERS.

△ DATUM PLANE H IS LOCATED AT THE BOTTOM OF THE MOLD PARTING LINE COINCIDENT WITH WHERE THE LEAD EXITS THE BODY.

△ DATUMS A-B AND D TO BE DETERMINED AT DATUM PLANE H.

△ D TO BE DETERMINED AT SEATING PLANE C.

△ DIMENSIONS D1 AND D2 DO NOT INCLUDE MOLD PROTRUSION. ALLOWABLE PROTRUSION IS 0.25mm PER SIDE.

DIMENSIONS D1 AND E1 INCLUDE MOLD MISMATCH AND ARE DETERMINED AT DATUM PLANE H.

△ DETAIL B OF PIN IDENTIFIER ARE OPTIONAL BUT MUST BE LOCATED WITHIN THE ZONE INDICATED.

△ REGARDLESS OF THE RELATIVE SIZE OF THE UPPER AND LOWER BODY SECTIONS, DIMENSIONS D1 AND E1 ARE DETERMINED AT THE LARGEST PART OF THE BODY EXCEPTIVE OF MOLD DASH AND BURRS, BUT INCLUDING ANY MISMATCH BETWEEN THE UPPER AND LOWER SECTIONS OF THE MOLDER BODY.

△ DIMENSION b DOES NOT INCLUDE DAMBAR PROTRUSION. THE DAMBAR PROTRUSION (⊕) SHALL NOT CAUSE THE LEAD WIDTH TO EXCEED a MAXIMUM BY MORE THAN 0.08mm. DAMBAR CANNOT BE LOCATED ON THE LOWER RAJUS OF THE LEAD FOOT.

△ THESE DIMENSIONS APPLY TO THE FLAT SECTION OF THE LEAD BETWEEN 0.10mm AND 0.25mm FROM THE LEAD TIP.

△ A1 IS DEFINED AS THE DISTANCE FROM THE SEATING PLANE TO THE LOWEST POINT OF THE PACKAGE BODY.

## 20. Revision History

Spansion Publication Number: **DS07-13803-2E**

| Revision | Date       | Modification   |
|----------|------------|--|
| Prelim 1 | 2007-05-2  | Creation   |
| Prelim 2 | 2007-05-24 | Electrical characteristics and memory description updates  |
| Prelim 3 | 2007-08-09 | Typo errors corrections, Flash memory programming interface update   |
| Prelim 4 | 2007-08-31 | Update of DC characteristics. new MB96F388 and MB96F389 added. LVD chapter added as well as an example characteristics chapter   |
| Prelim 5 | 2007-09-06 | Updates of the DC characteristics, interrupt vector table update, update of the LVD characteristics  |
| Prelim 6 | 2007-11-14 | Memory map for external bus modified. Modifications of the drawing of the pin circuits. Electrical characteristics updates. Rephrasing and typos corrections. Add Slew rate high current outputs chapter.<br>Modification of the block diagram.<br>Memory map modified for Flash. RAM memory map added.<br>Pin circuit type corrected. Type L IO is now included.  |
| Prelim 7 | 2007-12-12 | Memory IO map modified<br>New Flash/ROM configuration presentation<br>Ordering information: MB96300B used as reference.<br>Block diagram modified to included relocated pins.<br>Main Flash becomes Flash memory A and Satellite flash becomes Flash memory B  |
| Prelim 8 | 2008-02-04 | <ul style="list-style-type: none"> <li>• Devices under development added: MB96384/385/F385/F388/F389</li> <li>• Block diagram corrected (existing resource pins)</li> <li>• Pin assignment: TTG8 -&gt; TTG7</li> <li>• Pin function table corrected</li> <li>• I/O circuit type diagrams corrected</li> <li>• Memory map cleaned up</li> <li>• "Flash sector configuration" replaced by corrected "User ROM Memory map for Flash devices", "ROM configuration" replaced by "User ROM Memory map for Mask ROM devices"</li> <li>• IO map table regenerated:               <ul style="list-style-type: none"> <li>- Port register: Naming style corrected</li> <li>- Memory control registers renamed (Main/Sat -&gt; A/B)</li> <li>- addresses after 000BFFh removed</li> </ul> </li> <li>• Absolute maximum ratings: Pd and Ta specified more precisely</li> <li>• Run and Sleep mode currents: more conditions added (1WS settings)</li> <li>• Run mode current spec in 48/24MHz mode corrected</li> <li>• Maximum CLKP2 frequency for MB96F386/F387 corrected</li> <li>• High current port input capacitance added</li> <li>• External bus timings: missing conditions added and readability improved</li> <li>• Alarm comparator spec updated (transition voltages defined)</li> <li>• MB96V300A removed</li> <li>• Ordering information updated</li> <li>• Typos and formatting corrected</li> </ul> |

| Revision | Date       | Modification   |
|----------|------------|--|
| 9        | 2009-01-09 | <ul style="list-style-type: none"> <li>• Format adjusted to official Fujitsu Microelectronics datasheet standard (mainly style changes and official notes and disclaimer added)</li> <li>• Numbering of Electrical Characteristics subchapters automated</li> <li>• Note about devices under development modified</li> <li>• I/O map: Note added about reserved addresses</li> <li>• Serial programming interface: Note about handshaking pins improved</li> <li>• ICCPLL for CLKS1/2=80MHz, CLKB=40MHz (F388/F389) increased by 5mA</li> <li>• ICCSPLL for CLKS1/2=80MHz, CLKB=40MHz (F388/F389) increased by 0.8mA (typ) and 1.3mA (max)</li> <li>• Updated ordering information: MB96384/385**A -&gt; MB96384/385**B</li> <li>• Package code of MB96V300 corrected in ordering information</li> <li>• Internal LCD divider resistance value corrected: Typ 35kOhm -&gt; 40kOhm, Max 50kOhm -&gt; 65kOhm</li> <li>• Run and Sleep mode currents of ROM devices (MB96384/385) reduced</li> <li>• Added voltage condition to pull-up resistance and LCD divide resistance spec</li> <li>• Lineup: Term “Data Flash” replaced by “independent 32KB Flash”</li> <li>• Ordering information: column “Independent 32KB Data Flash” replaced by new column “Flash/ROM”, column “Remarks” removed</li> <li>• Official package dimension drawing with additional notes added</li> <li>• Empty pages removed</li> <li>• MB96384/385 and MB96F385/F388/F389 separated in DC spec and currents of these devices adjusted according to first evaluation results</li> <li>• Alarm comparator: Power supply current max values increased, comparison time reduced, mode transition time and power-up stabilization time newly added</li> <li>• Handling devices: Notes added about Serial communication and about using ceramic resonators.</li> <li>• Feature list and AC Characteristics: 16MHz maximum frequency is valid for crystal oscillators. For resonators, maximum frequency depends on Q-factor</li> <li>• AC characteristics: PLL phase skew spec added, CLKVCO min=64MHz</li> <li>• VOL3 spec improved: spec valid for 3mA load for full Vcc range</li> <li>• C-Pin cap spec updated: 4.7uF-10uF capacitor with tolerance permitted</li> <li>• “Preliminary” watermark removed</li> </ul> |

**NOTE: Please see “Document History” about later revised information.**
