1 Functional description

1.1 Overview

MAX-M10S module features the u-blox M10 standard precision GNSS platform and provides exceptional sensitivity and acquisition time for all L1 GNSS signals.

The M10 platform supports concurrent reception of four GNSS (GPS, GLONASS, Galileo, and BeiDou). The high number of visible satellites enables the receiver to select the best signals. This maximizes the position availability, in particular under challenging conditions such as in deep urban canyons.

u-blox Super-S (Super-Signal) technology offers great RF sensitivity and can improve the dynamic position accuracy with small antennas or in non-line-of-sight scenarios.

The extremely low power consumption of 25 mW in continuous tracking mode allows great power autonomy for all battery-operated devices, such as asset trackers, without compromising on GNSS performance.

For maximum sensitivity in passive antenna designs, MAX-M10S integrates an LNA followed by a SAW filter in the RF path.

MAX-M10S offers backwards pin-to-pin compatibility with products from the previous u-blox generations, which saves the designer's effort and reduces costs when upgrading designs to the advanced low-power u-blox M10 GNSS technology.

1.3 Supported GNSS constellations

MAX-M10S is a concurrent GNSS receiver that can receive and track multiple GNSS systems. The single RF front-end architecture enables concurrent reception of multiple GNSS constellations. The receiver can be configured for a subset of GNSS constellations to achieve lower power consumption.

The default configuration on MAX-M10S is concurrent reception of GPS, Galileo, and BeiDou B1I with QZSS and SBAS enabled.

The following GNSS and their signals are supported:

⁵ GPS is always in combination with SBAS and QZSS.

⁶ CEP, 50%, 24 hours static, -130 dBm, > 6 SVs for each GNSS system.

⁷ Commanded starts.

⁸ All satellites at -130 dBm. Measured at room temperature.

⁹ Dependent on the speed and latency of the aiding data connection, commanded starts.

¹⁰ Using seven days old AssistNow Offline data. External memory may be required.

¹¹ Using two days old orbital predicted data. External memory may be required.

¹² Demonstrated with a good external LNA. Measured at room temperature.

System	Signals
GPS / QZSS	L1C/A (1575.42 MHz)
Galileo	E1-B/C (1575.42 MHz)
GLONASS	L1OF (1602 MHz + k*562.5 kHz, k = -7,..., 5, 6)
BeiDou ¹³	B1I (1561.098 MHz), B1C (1575.42 MHz)

The following GNSS assistance services are supported:

Service	Support
AssistNow™ Online	GPS L1C/A, Galileo E1, QZSS L1C/A, GLONASS L1OF, BeiDou B1I
AssistNow™ Offline	GPS L1C/A, Galileo E1, GLONASS L1OF
AssistNow™ Autonomous	GPS L1C/A, Galileo E1, GLONASS L1OF, QZSS L1C/A, BeiDou B1I

The following augmentation systems are supported:

System	Support
SBAS	EGNOS, GAGAN, MSAS, WAAS and BDSBAS
QZSS	L1S (SLAS)

Table 6: Supported augmentation systems

The augmentation systems SBAS and QZSS can be enabled only if GPS operation is also enabled.

1.4 Supported protocols

MAX-M10S supports the following interface protocols:

Protocol	Type
UBX	Input/output, binary, u-blox proprietary
NMEA versions 2.1, 2.3, 4.0, 4.10 and 4.11 (default)	Input/output, ASCII

Table 7: Supported protocols

1.5 Firmware features

Feature	Description
Antenna supervisor ¹⁴	Antenna supervisor for active antenna control and short detection
CloudLocate GNSS	Extends the life of energy-constrained IoT applications. Small payload messages supported.
Assisted GNSS	AssistNow Online, AssistNow Offline and AssistNow Autonomous
Backup modes	Hardware backup mode and software standby mode
Power save modes ¹⁵	On/off, cyclic tracking
Super-S	Improved dynamic position accuracy with small antennas

¹³ BeiDou B1I cannot be enabled simultaneously with BeiDou B1C or GLONASS L1OF.

¹⁴ External components required, some pins need to be reconfigured.

¹⁵ The power save modes are not available if BeiDou B1C is enabled.

Feature	Description
Protection level	Real-time position accuracy estimate with 95% confidence level ¹⁶
Galileo return link messages	Galileo search and rescue (SAR) return link messages (RLM) via Galileo satellite signal
Data batching	Autonomous tracking up to 10 minutes at 1 Hz
Odometer	Measure traveled distance with support for different user profiles

Table 8: Firmware features

Feature	Description
Anti-jamming	RF interference and jamming detection and reporting
Anti-spoofing	Spoofing detection and reporting
Configuration lockdown	Receiver configuration can be locked by command
Message integrity	All messages can be cryptographically signed
Secure boot	Only signed firmware images are executed

18	SAFEBOOT_N	-	I	Safeboot mode (active low). Leave open if not used. ¹⁷

Table 10: MAX-M10S pin assignment

¹⁷ The receiver enters safeboot mode if this pin is low at start up. The SAFEBOOT_N pin is internally connected to TIMEPULSE pin through a 1 kΩ series resistor.

3.2 Pin state

Table 11 defines the state of the PIOs and RESET_N pins in different modes. The functions of the PIOs are as defined in the default configuration.

PIO no.	Pin no.	Default function	Continuous mode	Software standby mode	Safe boot mode
0	3	RXD	Input pull-up	Input pull-up	Input pull-up
1	2	TXD	Output	Input pull-up	Output

7	13	LNA_EN	Output (high)	Input pull-down	Input pull-up
-	9	RESET_N	Input pull-up	Input pull-up	Input pull-up

Table 11: Pins state

In reset mode (RESET_N = low), all PIOs are configured as input pull-up.

In hardware backup mode (VCC = 0 V and V_IO = 0 V), PIOs must not be driven.

4 Electrical specifications

4.1 Absolute maximum ratings

- CAUTION. Risk of device damage. Exceeding the absolute maximum ratings may affect the lifetime and reliability of the device or permanently damage it. Do not exceed the absolute maximum ratings.
- This product is not protected against overvoltage or reversed voltages. Use appropriate protection to avoid device damage from voltage spikes exceeding the specified boundaries.

4.2 Operating conditions

Table 13 shows the general operating conditions. Table 14 shows the electrical parameters for digital I/O.

The V_{IO} voltage range is selected with the V_{IO_SEL} pin.

- For designs with 1.8 V supply at V_{IO} and V_{BCKP} supplied, switch off V_{IO} supply 100 ms before VCC when transitioning to hardware backup mode. Alternatively, put the receiver to software standby mode by sending UBX-RXM-PMREQ message before switching off V_{IO} and VCC. For designs with 3 V supplies, both supplies can be switched off simultaneously or ensure that V_{IO} is switched off before VCC.

Symbol	Parameter	Min	Typical	Max	Unit
VCC	Main supply voltage	1.76	1.8, 3.3	3.6	V
V _{IO}	IO supply voltage, V _{IO_SEL} = GND	1.76	1.8	VCC (max 1.98)	V

¹⁸ Exceeding the voltage ramp speed may permanently damage the device.

¹⁹ The SAFEBOOT_N pin has an internal 1 kΩ series resistor.

4.3 Indicative power requirements

This section provides examples of typical current requirements. They are characterized on samples using a cold start command. The actual power requirements may vary depending on the firmware version used, the external circuitry, the number of satellites tracked, the signal strength, the type and time of start, duration, internal LNA gain mode, and the test conditions.

All values in [Table 15](#), [Table 16](#), and [Table 17](#) have been measured at 25 °C ambient temperature with the default configuration unless otherwise stated. SBAS and QZSS are active in all measurements.

[Table 15](#) shows indicative current consumption for VCC and V_IO with a 3.0 V supply.

²¹ The RF_IN input integrates a built-in DC block.

²² The internal LNA gain is configurable.

²³ V_{in} = V_IO, at room temperature.

²⁴ TIMEPULSE (PIO4) has 4 mA current drive/sink capability.

²⁵ TXD, RXD, TIMEPULSE, EXTINT, SCL, SDA, and LNA_EN.

²⁶ The SAFEBOOT_N pin has an additional 1 kΩ series resistor.

5 Communication interfaces

The receiver supports communication over the UART and I2C interfaces.

All the inputs have an internal pull-up resistor in normal operation and can be left open if not used. The voltage level at the PIO pins is related to the V_{IO} supply voltage.

5.1 UART

The UART interface supports configurable baud rates. Hardware flow control is not supported. UART specifications are described in [Table 18](#).

Symbol	Parameter	Min	Max	Unit
R _u	Baud rate	9600	921600	bit/s
Δ _{Tx}	Tx baud rate accuracy	-1%	+1%	-
Δ _{Rx}	Rx baud rate tolerance	-2.5%	+2.5%	-

Table 18: UART specifications

5.2 I2C

An I2C interface is available for communication with an external host CPU in the I2C Fast-mode. Backwards compatibility with the Standard-mode I2C bus operation is not supported. The interface can be operated only in the peripheral mode with a maximum clock frequency of 320 kHz³².

The interface can make use of clock stretching by holding the SCL line LOW to pause a transaction. In this case, the bit transfer rate is reduced. The maximum clock stretching time is 20 ms.

Figure 3: I2C peripheral specification

³² External pull-up resistors may be needed to achieve 320 kbit/s communication speed, as the internal pull-up resistance can be very large.

5.3 Default interface settings

Interface	Settings
UART	<ul style="list-style-type: none"> 9600 baud, 8 bits, no parity bit, 1 stop bit. Input messages: NMEA and UBX. Output messages: NMEA GGA, GLL, GSA, GSV³⁵, RMC, VTG and TXT.
I2C	<ul style="list-style-type: none"> 7-bit I2C address (0x42). Input messages: NMEA and UBX. Output messages: NMEA GGA, GLL, GSA, GSV³⁵, RMC, VTG and TXT.

Table 20: Default interface settings

³³ External device must provide a hold time of at least one transition time (max 300 ns) for the SDA signal (with respect to the min V_{ih} of the SCL signal) to bridge the undefined region of the falling edge of SCL.

³⁴ The maximum $t_{HD;DAT}$ must be less than the maximum $t_{VD;DAT}$ or $t_{VD;ACK}$ with a maximum of 0.9 μ s by a transition time. This maximum must only be met if the device does not stretch the LOW period (t_{LOW}) of the SCL signal. If the clock stretches the SCL, the data must be valid by the set-up time before it releases the clock.

³⁵ In the default configuration, the NMEA-GSV messages are sent at 5-second intervals to avoid overflow in the TX buffer.

Table 21: MAX-M10S mechanical dimensions

The mechanical picture of the de-paneling residual tab (P) is an approximate representation, shape and position may vary.

 Take the size of the de-paneling residual tabs into account when designing the component keepout area.

 The pad width (K) applies to all four corner pads.

7 Qualifications and approvals

Quality and reliability	
Product qualification	Qualified according to u-blox qualification policy, based on a subset of AEC-Q104
Manufacturing	Manufactured at ISO/TS 16949 certified sites
Environmental	
RoHS compliance	Yes
Moisture sensitivity level (MSL) ^{36, 37}	4
Type approvals	
European RED certification (CE)	Declaration of Conformity (DoC) is available on the u-blox website .
UK conformity assessment (UKCA)	Yes

Table 22: Qualifications and approvals

³⁶ For MSL standard see IPC/JEDEC J-STD-020 and J-STD-033 [5].

³⁷ For more information regarding moisture sensitivity levels, labeling, storage, and drying, see the Product packaging reference guide [4].

8 Product handling

8.1 Soldering

Reflow soldering procedures are described in the IPC/JEDEC J-STD-020 standard [5].

9 Labeling and ordering information

This section provides information about product labeling and ordering.

9.1 Product labeling

The labeling of MAX-M10S package provides product information and revision information. For more information, contact u-blox sales.

Figure 5: MAX-M10S label

The parts of the product code are explained in [Table 23](#)

Code	Meaning	Example
PPP	Product family	MAX
TGG	Platform	M10 = u-blox M10
V	Variant	S = Standard precision, ROM, TCXO, LNA, and SAW filter
NN	Option	00, 01, 02, ...
Q	Quality grade	A = Automotive, B = Professional
XX	Product detail	Describes hardware and firmware versions

Table 23: Part identification code

9.2 Explanation of product codes

Three product code formats are used in the product label. The product name is used in documentation such as this data sheet and identifies all u-blox products, independent of packaging and quality grade. The ordering code includes options and quality, while the type number includes the hardware and firmware versions.

[Table 24](#) describes the three different product code formats used in the MAX-M10S module.

Format	Structure	Product code
Product name	PPP-TGGV	MAX-M10S
Ordering code	PPP-TGGV-NNQ	MAX-M10S-00B
Type number	PPP-TGGV-NNQ-XX	MAX-M10S-00B-01

Table 24: Product code formats

9.3 Ordering codes

Ordering code	Product	Remark
MAX-M10S-00B	u-blox M10 GNSS receiver module, professional grade
