| S <sub>FDR</sub>      | Spurious free dynamic range, differential mode, 12-bit resolution, 1/1 gain, 3 μs acquisition time, HFXO, 200 ksp/s               |      | 70   |      | dBc   |
| R <sub>LADDER</sub>   | Ladder resistance                                                                                                                 |      | 160  |      | kΩ    |

### 6.12.12 Performance factors

Clock jitter, affecting sample timing accuracy, and circuit noise can affect ADC performance.

Jitter can be between START tasks or from START task to acquisition. START timer accuracy and startup times of regulators and references will contribute to variability. Sources of circuit noise may include CPU activity and the DC/DC regulator. Best ADC performance is achieved using START timing based on the TIMER module, HFXO clock source, and Constant Latency mode.

## 6.13 SPIM — Serial peripheral interface master with EasyDMA

The SPI master can communicate with multiple slaves using individual chip select signals for each of the slave devices attached to a bus.

Listed here are the main features for the SPIM

- SPI mode 0-3
- EasyDMA direct transfer to/from RAM for both SPI Slave and SPI Master
- Individual selection of IO pin for each SPI signal

<sup>b</sup> Does not include temperature drift

<sup>13</sup> Maximum gain corresponds to highest capacitance.

Figure 72: SPIM — SPI master with EasyDMA

The SPIM does not implement support for chip select directly. Therefore, the CPU must use available GPIOs to select the correct slave and control this independently of the SPI master. The SPIM supports SPI modes 0 through 3. The CONFIG register allows setting CPOL and CPHA appropriately.

| Mode      | Clock polarity  | Clock phase  |
|-----------|-----------------|--------------|
|           | CPOL            | CPHA         |
| SPI_MODE0 | 0 (Active High) | 0 (Leading)  |
| SPI_MODE1 | 0 (Active High) | 1 (Trailing) |
| SPI_MODE2 | 1 (Active Low)  | 0 (Leading)  |
| SPI_MODE3 | 1 (Active Low)  | 1 (Trailing) |

Table 70: SPI modes

### 6.13.1 SPI master transaction sequence

An SPI master transaction consists of a sequence started by the START task followed by a number of events, and finally the STOP task.

An SPI master transaction is started by triggering the START task. The ENDTX event will be generated when the transmitter has transmitted all bytes in the TXD buffer as specified in the TXD.MAXCNT register. The ENDRX event will be generated when the receiver has filled the RXD buffer, i.e. received the last possible byte as specified in the RXD.MAXCNT register.

Following a START task, the SPI master will generate an END event when both ENDRX and ENDTX have been generated.

The SPI master is stopped by triggering the STOP task. A STOPPED event is generated when the SPI master has stopped.

If the ENDRX event has not already been generated when the SPI master has come to a stop, the SPI master will generate the ENDRX event explicitly even though the RX buffer is not full.

If the ENDTX event has not already been generated when the SPI master has come to a stop, the SPI master will generate the ENDTX event explicitly even though all bytes in the TXD buffer, as specified in the TXD.MAXCNT register, have not been transmitted.

The SPI master is a synchronous interface, and for every byte that is sent, a different byte will be received at the same time; this is illustrated in [SPI master transaction](#) on page 226.

Figure 73: SPI master transaction

### 6.13.2 Master mode pin configuration

The SCK, MOSI, and MISO signals associated with the SPI master are mapped to physical pins according to the configuration specified in the PSEL.SCK, PSEL.MOSI, and PSEL.MISO registers respectively.

The PSEL.SCK, PSEL.MOSI, and PSEL.MISO registers and their configurations are only used as long as the SPI master is enabled, and retained only as long as the device is in ON mode. PSEL.SCK, PSEL.MOSI and PSEL.MISO must only be configured when the SPI master is disabled.

To secure correct behavior in the SPI, the pins used by the SPI must be configured in the GPIO peripheral as described in [GPIO configuration](#) on page 226 prior to enabling the SPI. This configuration must be retained in the GPIO for the selected IOs as long as the SPI is enabled.

Only one peripheral can be assigned to drive a particular GPIO pin at a time. Failing to do so may result in unpredictable behavior.

| SPI master signal | SPI master pin            | Direction | Output value        |
|-------------------|---------------------------|-----------|---------------------|
| SCK               | As specified in PSEL.SCK  | Output    | Same as CONFIG.CPOL |
| MOSI              | As specified in PSEL.MOSI | Output    | 0                   |
| MISO              | As specified in PSEL.MISO | Input     | Not applicable      |

Table 71: GPIO configuration

### 6.13.3 Shared resources

The SPI shares registers and other resources with other peripherals that have the same ID as the SPI. Therefore, the user must disable all peripherals that have the same ID as the SPI before the SPI can be configured and used.

Disabling a peripheral that has the same ID as the SPI will not reset any of the registers that are shared with the SPI. It is therefore important to configure all relevant SPI registers explicitly to secure that it operates correctly.

See the Instantiation table in [Instantiation](#) on page 24 for details on peripherals and their IDs.

### 6.13.4 EasyDMA

The SPIM implements EasyDMA for accessing RAM without CPU involvement.

The SPIM peripheral implements the following EasyDMA channels:

| Channel | Type   | Register Cluster |
|---------|--------|------------------|
| TXD     | READER | TXD              |
| RXD     | WRITER | RXD              |

Table 72: SPIM EasyDMA Channels

For detailed information regarding the use of EasyDMA, see [EasyDMA](#) on page 45.

The .PTR and .MAXCNT registers are double-buffered. They can be updated and prepared for the next transmission immediately after having received the STARTED event.

The SPI master will automatically stop transmitting after TXD.MAXCNT bytes have been transmitted and RXD.MAXCNT bytes have been received. If RXD.MAXCNT is larger than TXD.MAXCNT, the remaining transmitted bytes will contain the value defined in the ORC register. If TXD.MAXCNT is larger than RXD.MAXCNT, the superfluous received bytes will be discarded.

The ENDRX/ENDTX event indicate that EasyDMA has finished accessing respectively the RX/TX buffer in RAM. The END event gets generated when both RX and TX are finished accessing the buffers in RAM.

In the case of bus congestion as described in [AHB multilayer interconnect](#) on page 47, data loss may occur.

### 6.13.5 Low power

When putting the system in low power and the peripheral is not needed, lowest possible power consumption is achieved by stopping, and then disabling the peripheral.

The STOP task may not be always needed (the peripheral might already be stopped), but if it is sent, software shall wait until the STOPPED event was received as a response before disabling the peripheral through the ENABLE register.

## 6.13.6 Registers

| Base address             | Peripheral | Instance                | Secure mapping | DMA security | Description  | Configuration |

  ## 6.13.7 Electrical specification

### 6.13.7.1 SPIM master interface electrical specifications

| Symbol                  | Description                                  | Min. | Typ. | Max. | Units         |
|-------------------------|----------------------------------------------|------|------|------|---------------|
| $f_{\text{SPIM}}$       | Bit rates for SPIM <sup>14</sup>             |      |      | 8    | Mbps          |
| $t_{\text{SPIM,START}}$ | Time from START task to transmission started |      | 1    |      | $\mu\text{s}$ |

### 6.13.7.2 Serial Peripheral Interface Master (SPIM) timing specifications

| Symbol                    | Description                                | Min.                                            | Typ. | Max.                         | Units |
|---------------------------|--------------------------------------------|-------------------------------------------------|------|------------------------------|-------|
| $t_{\text{SPIM,CCLK}}$    | SCK period                                 |                                                 | 125  |                              | ns    |
| $t_{\text{SPIM,RSCK,LD}}$ | SCK rise time, standard drive <sup>a</sup> |                                                 |      | $t_{\text{RF},25\text{pF}}$  |       |
| $t_{\text{SPIM,RSCK,HD}}$ | SCK rise time, high drive <sup>a</sup>     |                                                 |      | $t_{\text{HRE},25\text{pF}}$ |       |
| $t_{\text{SPIM,FSCK,LD}}$ | SCK fall time, standard drive <sup>a</sup> |                                                 |      | $t_{\text{RF},25\text{pF}}$  |       |
| $t_{\text{SPIM,FSCK,HD}}$ | SCK fall time, high drive <sup>a</sup>     |                                                 |      | $t_{\text{HRE},25\text{pF}}$ |       |
| $t_{\text{SPIM,WHCK}}$    | SCK high time <sup>a</sup>                 | $(0.5 \cdot t_{\text{CCLK}} - t_{\text{RSCK}})$ |      |                              |       |
| $t_{\text{SPIM,WLCK}}$    | SCK low time <sup>a</sup>                  | $(0.5 \cdot t_{\text{CCLK}} - t_{\text{FSCK}})$ |      |                              |       |
| $t_{\text{SPIM,SUMI}}$    | MISO to CLK edge setup time                | 19                                              |      |                              | ns    |
| $t_{\text{SPIM,HMI}}$     | CLK edge to MISO hold time                 | 18                                              |      |                              | ns    |
| $t_{\text{SPIM,VMO}}$     | CLK edge to MOSI valid                     |                                                 |      | 59                           | ns    |
| $t_{\text{SPIM,HMO}}$     | MOSI hold time after CLK edge              | 20                                              |      |                              | ns    |

<sup>14</sup> High bit rates may require GPIOs to be set as High Drive, see GPIO chapter for more details.

<sup>a</sup> At 25pF load, including GPIO pin capacitance, see GPIO spec.

Figure 74: SPIM timing diagram

## 6.14 SPIS — Serial peripheral interface slave with EasyDMA

SPI slave (SPIS) is implemented with EasyDMA support for ultra low power serial communication from an external SPI master. EasyDMA in conjunction with hardware-based semaphore mechanisms removes all real-time requirements associated with controlling the SPI slave from a low priority CPU execution context.

Figure 75: SPI slave

The SPIS supports SPI modes 0 through 3. The CONFIG register allows setting CPOL and CPHA appropriately.

| Mode      | Clock polarity  | Clock phase       |
|-----------|-----------------|-------------------|
|           | CPOL            | CPHA              |
| SPI_MODE0 | 0 (Active High) | 0 (Trailing Edge) |
| SPI_MODE1 | 0 (Active High) | 1 (Leading Edge)  |
| SPI_MODE2 | 1 (Active Low)  | 0 (Trailing Edge) |
| SPI_MODE3 | 1 (Active Low)  | 1 (Leading Edge)  |

Table 75: SPI modes

### 6.14.1 Shared resources

The SPI slave shares registers and other resources with other peripherals that have the same ID as the SPI slave. Therefore, you must disable all peripherals that have the same ID as the SPI slave before the SPI slave can be configured and used.

Disabling a peripheral that has the same ID as the SPI slave will not reset any of the registers that are shared with the SPI slave. It is important to configure all relevant SPI slave registers explicitly to secure that it operates correctly.

The Instantiation table in [Instantiation](#) on page 24 shows which peripherals have the same ID as the SPI slave.

### 6.14.2 EasyDMA

The SPIS implements EasyDMA for accessing RAM without CPU involvement.

The SPIS peripheral implements the following EasyDMA channels:

| Channel | Type   | Register Cluster |
|---------|--------|------------------|
| TXD     | READER | TXD              |
| RXD     | WRITER | RXD              |

Table 76: SPIS EasyDMA Channels

For detailed information regarding the use of EasyDMA, see [EasyDMA](#) on page 45.

If RXD.MAXCNT is larger than TXD.MAXCNT, the remaining transmitted bytes will contain the value defined in the ORC register.

The END event indicates that EasyDMA has finished accessing the buffer in RAM.

### 6.14.3 SPI slave operation

SPI slave uses two memory pointers, RXD.PTR and TXD.PTR, that point to the RXD buffer (receive buffer) and TXD buffer (transmit buffer) respectively. Since these buffers are located in RAM, which can be accessed by both the SPI slave and the CPU, a hardware based semaphore mechanism is implemented to enable safe sharing.

Before the CPU can safely update the RXD.PTR and TXD.PTR pointers it must first acquire the SPI semaphore. The CPU can acquire the semaphore by triggering the ACQUIRE task and then receiving the ACQUIRED event. When the CPU has updated the RXD.PTR and TXD.PTR pointers the CPU must release the semaphore before the SPI slave will be able to acquire it.

The CPU releases the semaphore by triggering the RELEASE task, this is illustrated in [SPI transaction when shortcut between END and ACQUIRE is enabled](#) on page 242. Triggering the RELEASE task when the semaphore is not granted to the CPU will have no effect. See [Semaphore operation](#) on page 243 for more information

If the CPU is not able to reconfigure the TXD.PTR and RXD.PTR between granted transactions, the same TX data will be clocked out and the RX buffers will be overwritten. To prevent this from happening, the END\_ACQUIRE shortcut can be used. With this shortcut enabled the semaphore will be handed over to the CPU automatically after the granted transaction has completed, giving the CPU the ability to update the TXPTR and RXPTR between every granted transaction.

The ENDRX event is generated when the RX buffer has been filled.

The RXD.MAXCNT register specifies the maximum number of bytes the SPI slave can receive in one granted transaction. If the SPI slave receives more than RXD.MAXCNT number of bytes, an OVERFLOW will be indicated in the STATUS register and the incoming bytes will be discarded.

The TXD.MAXCNT parameter specifies the maximum number of bytes the SPI slave can transmit in one granted transaction. If the SPI slave is forced to transmit more than TXD.MAXCNT number of bytes, an OVERREAD will be indicated in the STATUS register and the ORC character will be clocked out.

The RXD.AMOUNT and TXD.AMOUNT registers are updated when a granted transaction is completed. The TXD.AMOUNT register indicates how many bytes were read from the TX buffer in the last transaction, that is, ORC (over-read) characters are not included in this number. Similarly, the RXD.AMOUNT register indicates how many bytes were written into the RX buffer in the last transaction.

Figure 76: SPI transaction when shortcut between END and ACQUIRE is enabled

### 6.14.4 Semaphore operation

The semaphore is a mechanism implemented inside the SPI slave that prevents simultaneous access to the data buffers by the SPI slave and CPU.

The semaphore is by default assigned to the CPU after the SPI slave is enabled. No ACQUIRED event will be generated for this initial semaphore handover. An ACQUIRED event will be generated immediately if the ACQUIRE task is triggered while the semaphore is assigned to the CPU. The figure [SPI semaphore FSM](#) on page 243 illustrates the transitions between states in the semaphore based on the relevant tasks and events.

Figure 77: SPI semaphore FSM

**Note:** The semaphore mechanism does not, at any time, prevent the CPU from performing read or write access to the RXD.PTR register, the TXD.PTR registers, or the RAM that these pointers are pointing to. The semaphore is only telling when these can be updated by the CPU so that safe sharing is achieved.

The SPI slave will try to acquire the semaphore when STARTED event is detected, the event also indicates that CSN is currently low. If the SPI slave does not manage to acquire the semaphore at this point (i.e., it is under CPU's control), the transaction will be ignored. This means that all incoming data on MOSI will be discarded, and the DEF (default) character will be clocked out on the MISO line throughout the whole transaction. This will also be the case even if the semaphore is released by the CPU during the transaction. In case of a race condition where the CPU and the SPI slave try to acquire the semaphore at the same time, as illustrated in lifeline item 2 in figure [SPI transaction when shortcut between END and ACQUIRE is enabled](#) on page 242, the semaphore will be granted to the CPU.

If the SPI slave acquires the semaphore, the transaction will be granted. The incoming data on MOSI will be stored in the RXD buffer and the data in the TXD buffer will be clocked out on MISO.

When a granted transaction is completed and CSN goes high, the SPI slave will automatically release the semaphore and generate the END event.

As long as the semaphore is available, the SPI slave can be granted multiple transactions one after the other.

If the CPU tries to acquire the semaphore while it is assigned to the SPI slave, an immediate handover will not be granted. However, the semaphore will be handed over to the CPU as soon as the SPI slave has released the semaphore after the granted transaction is completed. If the END\_ACQUIRE shortcut is enabled and the CPU has triggered the ACQUIRE task during a granted transaction, only one ACQUIRE request will be served following the END event.

## 6.14.5 Pin configuration

The CSN, SCK, MOSI, and MISO signals associated with the SPI slave are mapped to physical pins according to the configuration specified in the PSEL.CSN, PSEL.SCK, PSEL.MOSI, and PSEL.MISO registers respectively. If the CONNECT field of any of these registers is set to Disconnected, the associated SPI slave signal will not be connected to any physical pins.

The PSEL.CSN, PSEL.SCK, PSEL.MOSI, and PSEL.MISO registers and their configurations are only used as long as the SPI slave is enabled, and retained only as long as the device is in System ON mode, see [POWER — Power control](#) on page 64 chapter for more information about power modes. When the peripheral is disabled, the pins will behave as regular GPIOs, and use the configuration in their respective OUT bit field and PIN\_CNF[n] register. PSEL.CSN, PSEL.SCK, PSEL.MOSI, and PSEL.MISO must only be configured when the SPI slave is disabled.

To secure correct behavior in the SPI slave, the pins used by the SPI slave must be configured in the GPIO peripheral as described in [GPIO configuration before enabling peripheral](#) on page 244 before enabling the SPI slave. This is to secure that the pins used by the SPI slave are driven correctly if the SPI slave itself is temporarily disabled, or if the device temporarily enters System OFF. This configuration must be retained in the GPIO for the selected I/Os as long as the SPI slave is to be recognized by an external SPI master.

The MISO line is set in high impedance as long as the SPI slave is not selected with CSN.

Only one peripheral can be assigned to drive a particular GPIO pin at a time. Failing to do so may result in unpredictable behavior.

| SPI signal | SPI pin                   | Direction | Output value   | Comment                                      |
|------------|---------------------------|-----------|----------------|----------------------------------------------|
| CSN        | As specified in PSEL.CSN  | Input     | Not applicable |                                              |
| SCK        | As specified in PSEL.SCK  | Input     | Not applicable |                                              |
| MOSI       | As specified in PSEL.MOSI | Input     | Not applicable |                                              |
| MISO       | As specified in PSEL.MISO | Input     | Not applicable | Emulates that the SPI slave is not selected. |

Table 77: GPIO configuration before enabling peripheral

## 6.14.6 Registers

| Base address             | Peripheral | Instance   | Secure mapping | DMA security | Description | Configuration |
|--------------------------|------------|------------|----------------|--------------|-------------|---------------|
| 0x50008000<br>0x40008000 | SPIS       | SPIS0 : S  | US             | SA           | SPI slave 0 |               |
|                          |            | SPIS0 : NS |                |              |             |               |
| 0x50009000<br>0x40009000 | SPIS       | SPIS1 : S  | US             | SA           | SPI slave 1 |               |

| f <sub>SPIS</sub>       | Bit rates for SPIS <sup>15</sup>                        |      |       | g <sup>16</sup> | Mbps  |
| t <sub>SPIS,START</sub> | Time from RELEASE task to receive/transmit (CSN active) |      | 0.125 |                 | μs    |

### 6.14.7.2 Serial Peripheral Interface Slave (SPIS) timing specifications

| Symbol                     | Description                       | Min.             | Typ. | Max. | Units |
|----------------------------|-----------------------------------|------------------|------|------|-------|
| t <sub>SPIS,CSCKIN</sub>   | SCK input period                  | 125              |      |      | ns    |
| t <sub>SPIS,RFSCCKIN</sub> | SCK input rise/fall time          |                  |      | 30   | ns    |
| t <sub>SPIS,WHSCCKIN</sub> | SCK input high time               | 30               |      |      | ns    |
| t <sub>SPIS,WLSCCKIN</sub> | SCK input low time                | 30               |      |      | ns    |
| t <sub>SPIS,SUCSN</sub>    | CSN to CLK setup time             | 1000             |      |      | ns    |
| t <sub>SPIS,HCSN</sub>     | CLK to CSN hold time              | 2000             |      |      | ns    |
| t <sub>SPIS,ASA</sub>      | CSN to MISO driven                | 0                |      |      | ns    |
| t <sub>SPIS,ASO</sub>      | CSN to MISO valid <sup>a</sup>    |                  |      | 1000 | ns    |
| t <sub>SPIS,DISSO</sub>    | CSN to MISO disabled <sup>a</sup> |                  |      | 68   | ns    |
| t <sub>SPIS,CWH</sub>      | CSN inactive time                 | 300              |      |      | ns    |
| t <sub>SPIS,VSO</sub>      | CLK edge to MISO valid            |                  |      | 19   | ns    |
| t <sub>SPIS,HSO</sub>      | MISO hold time after CLK edge     | 18 <sup>17</sup> |      |      | ns    |
| t <sub>SPIS,SUSI</sub>     | MOSI to CLK edge setup time       | 59               |      |      | ns    |
| t <sub>SPIS,HSI</sub>      | CLK edge to MOSI hold time        | 20               |      |      | ns    |

<sup>15</sup> High bit rates may require GPIOs to be set as High Drive, see GPIO chapter for more details.

<sup>16</sup> The actual maximum data rate depends on the master's CLK to MISO and MOSI setup and hold timings.

<sup>a</sup> At 25pF load, including GPIO capacitance, see GPIO spec.

<sup>17</sup> This is to ensure compatibility to SPI masters sampling MISO on the same edge as MOSI is output

## 6.15 SPU — System protection unit

SPU is the central point in the system to control access to memories, peripherals and other resources.

Listed here are the main features of the SPU:

- ARM TrustZone support, allowing definition of secure, non-secure and non-secure callable memory regions
- Extended ARMTrustZone, protecting memory regions and peripherals from non-CPU devices like EasyDMA transfer
- Pin access protection, preventing non-secure code and peripherals from accessing secure pin resources
- DPPI access protection, realized by preventing non-secure code and peripherals to publish from or subscribe to secured DPPI channels
- External domain access protection, controlling access rights from other MCUs

### 6.15.1 General concepts

SPU provides a register interface to control the various internal logic blocks that monitor access to memory-mapped slave devices (RAM, flash, peripherals, etc) and other resources (device pins, DPPI channels, etc).

For memory-mapped devices like RAM, flash and peripherals, the internal logic checks the address and attributes (e.g. read, write, execute, secure) of the incoming transfer to block it if necessary. Whether a secure resource can be accessed by a given master is defined:

#### For a CPU-type master

By the security state of the CPU and the security state reported by the SPU, for the address in the bus transfer

#### For a non-CPU master

By the security attribute of the master that initiates the transfer, defined by a SPU register

The [Simplified view of the protection of RAM, flash and peripherals using SPU](#) on page 259 shows a simplified view of the SPU registers controlling several internal modules.

Figure 80: Simplified view of the protection of RAM, flash and peripherals using SPU

The protection logic implements a read-as-zero/write-ignore (RAZ/WI) policy:

- A blocked read operation will always return a zero value on the bus, preventing information leak
- A write operation to a forbidden region or peripheral will be ignored

An error is reported through dedicated error signals. For security state violations from an M33 master this will be a SecureFault exception, for other violations this will be an SPU event. The SPU event can be configured to generate an interrupt towards the CPU.

Other resources like pins and DPPI channels are protected by comparing the security attributes of the protected resource with the security attribute of the peripheral that wants to access it. The SPU is the only place where those security attributes can be configured.

### 6.15.1.1 Special considerations for ARM TrustZone for Cortex-M enabled system

For a ARM TrustZone for Cortex-M enabled CPU, the SPU also controls custom logic.

Custom logic is shown as the implementation defined attribution unit (IDAU) in figure [Simplified view of the protection of RAM, flash and peripherals using SPU](#) on page 259. Full support is provided for:

- ARM TrustZone for Cortex-M related instructions, like test target (TT) for reporting the security attributes of a region
- Non-secure callable (NSC) regions, to implement secure entry points from non-secure code

The SPU provides the necessary registers to configure the security attributes for memory regions and peripherals. However, as a requirement to use the SPU, the secure attribution unit (SAU) needs to be disabled and all memory set as non-secure in the ARM core. This will allow the SPU to control the IDAU and set the security attribution of all addresses as originally intended.

### 6.15.2 Flash access control

The flash memory space is divided in regions, each of them with configurable permissions settings.

The flash memory space is divided into 32 regions of 32 KiB .

For each region, four different types of permissions can be configured:

#### Read

Allows data read access to the region. Note that code fetch from this region is not controlled by the read permission but by the execute permission described below.

#### Write

Allows write or page erase access to the region

#### Execute

Allows code fetch from this region, even if data read is disabled

#### Secure

Allows only bus accesses with the security attribute set to access the region

Permissions can be set independently. For example, it is possible to configure a flash region to be accessible only through secure transfer, being read-only (no write allowed) and non-executable (no code fetch allowed). For each region, permissions can be set and then locked by using the [FLASHREGION\[n\].PERM.LOCK](#) bit, to prevent subsequent modifications.

Note that the debugger is able to step through execute-protected memory regions.

The following figure shows the flash memory space and the divided regions:

Figure 81: Definition of the  $N=32$  regions, each of 32 KiB, in the flash memory space

### 6.15.2.1 Non-secure callable (NSC) region definition in flash

The SPU provides support for the definition of non-secure callable (NSC) sub-regions to allow non-secure to secure function calls.

A non-secure callable sub-region can only exist within an existing secure region and its definition is done using two registers:

- `FLASHNSC[n].REGION`, used to select the secure region that will contain the NSC sub-region
- `FLASHNSC[n].SIZE`, used to define the size of the NSC sub-region within the secure region

The NSC sub-region will be defined from the highest address in that region, going downwards. Figure below illustrates the NSC sub-regions and the registers used for their definition:

Figure 82: Non-secure callable region definition in the flash memory space

The NSC sub-region will only be defined if:

- FLASHNSC[i].SIZE value is non zero
- FLASHNSC[i].REGION defines a secure region

If FLASHNSC[i].REGION and FLASHNSC[j].REGION have the same value, there is only one sub-region defined as NSC, with the size given by the maximum of FLASHNSC[i].SIZE and FLASHNSC[j].SIZE.

If FLASHNSC[i].REGION defines a non-secure region, then there is no non-secure callable region defined and the selected region stays non-secure.

### 6.15.2.2 Flash access error reporting

The SPU and the logic controlled by it will respond with a certain behavior once an access violation is detected.

The following will happen once the logic controlled by the SPU detects an access violation on one of the flash ports:

- The faulty transfer will be blocked
- In case of a read transfer, the bus will be driven to zero
- Feedback will be sent to the master through specific bus error signals, if this is supported by the master. Moreover, the SPU will receive an event that can optionally trigger an interrupt towards the CPU.
- SecureFault exception will be triggered if security violation is detected for access from Cortex-M33
- BusFault exception will be triggered when read/write/execute protection violation is detected for Cortex-M33
- FLASHACCERR event will be triggered if any access violations are detected for all master types except for Cortex-M33 security violation

The following table summarizes the SPU behavior based on the type of initiator and access violation:

| Master type   | Security violation        | Read/Write/Execute protection violation |
|---------------|---------------------------|-----------------------------------------|
| Cortex-M33    | SecureFault exception     | BusFault exception, FLASHACCERR event   |
| EasyDMA       | RAZ/WI, FLASHACCERR event | RAZ/WI, FLASHACCERR event               |
| Other masters | RAZ/WI, FLASHACCERR event | RAZ/WI, FLASHACCERR event               |

Table 80: Error reporting for flash access errors

For a Cortex-M33 master, the SecureFault exception will take precedence over the BusFault exception if a security violation occurs simultaneously with another type of violation.

### 6.15.2.3 UICR and FICR protections

The user information configuration registers (UICR) and factory information configuration registers (FICR) are always considered as secure. FICR registers are read-only. UICR registers can be read and written by secure code only.

Writing new values to user information configuration registers must follow the procedure described in [NVMC — Non-volatile memory controller](#) on page 29. Code execution from FICR and UICR address spaces will always be reported as access violation, an exception to this rule applies during a debug session.

### 6.15.3 RAM access control

The RAM memory space is divided in regions, each of them with configurable permissions settings.

The RAM memory space is divided into 32 regions of 8 KiB.

For each region, four different types of permissions can be configured:

#### Read

Allows data read access to the region. Code fetch from this region is not controlled by the read permission but by the execute permission described below.

#### Write

Allows write access to the region

#### Execute

Allows code fetch from this region

#### Secure

Allows only bus accesses with the security attribute set to access the region

Permissions can be set independently. For example, it is possible to configure a RAM region to be accessible only through secure transfer, being read-only (no write allowed) and non-executable (no code fetch allowed). For each region, permissions can be set and then locked to prevent subsequent modifications by using the [RAMREGION\[n\].PERM.LOCK](#) bit.

The following figure shows the RAM memory space and the divided regions:

Figure 83: Definition of the  $N=32$  regions, each of 8 KiB, in the RAM memory space

### 6.15.3.1 Non-secure callable (NSC) region definition in RAM

The SPU provides support for the definition of non-secure callable (NSC) sub-regions to allow non-secure to secure function calls.

A non-secure callable sub-region can only exist within an existing secure region and its definition is done using two registers:

- `RAMNSC[n].REGION`, used to select the secure region that will contain the NSC sub-region
- `RAMNSC[n].SIZE`, used to define the size of the NSC sub-region within the secure region

The NSC sub-region will be defined from the highest address in that region, going downwards. Figure below illustrates the NSC sub-regions and the registers used for their definition:

Figure 84: Non-secure callable region definition in the RAM memory space

The NSC sub-region will only be defined if:

- `RAMNSC[i].SIZE` value is non zero
- `RAMNSC[i].REGION` defines a secure region

If `RAMNSC[i].REGION` and `RAMNSC[j].REGION` have the same value, there is only one sub-region defined as NSC, with the size given by the maximum of `RAMNSC[i].SIZE` and `RAMNSC[j].SIZE`.

If `RAMNSC[i].REGION` defines a non-secure region, then there is no non-secure callable region defined and the selected region stays non-secure.

### 6.15.3.2 RAM access error reporting

The SPU and the logic controlled by it will respond with a certain behavior once an access violation is detected.

The following will happen once the logic controlled by the SPU detects an access violation on one of the RAM ports:

- The faulty transfer will be blocked
- In case of a read transfer, the bus will be driven to zero
- Feedback will be sent to the master through specific bus error signals, if this is supported by the master
- SecureFault exception will be triggered if security violation is detected for access from Cortex-M33
- BusFault exception will be triggered when read/write/execute protection violation is detected for Cortex-M33. The SPU will also generate an event that can optionally trigger an interrupt towards the CPU.
- `RAMACCERR` event will be triggered if any access violations are detected for all master types but for Cortex-M33 security violation

The following table summarizes the SPU behavior based on the type of initiator and access violation:

| Master type   | Security violation      | Read/Write/Execute protection violation |
|---------------|-------------------------|-----------------------------------------|
| Cortex-M33    | SecureFault exception   | BusFault exception, RAMACCERR event     |
| EasyDMA       | RAZ/WI, RAMACCERR event | RAZ/WI, RAMACCERR event                 |
| Other masters | RAZ/WI, RAMACCERR event | RAZ/WI, RAMACCERR event                 |

Table 81: Error reporting for RAM access errors

For a Cortex-M33 master, the SecureFault exception will take precedence over the BusFault exception if a security violation occurs simultaneously with another type of violation.

### 6.15.4 Peripheral access control

Access controls are defined by the characteristics of the peripheral.

Peripherals can have their security attribute set as:

#### Always secure

For a peripheral related to system control

#### Always non-secure

For some general-purpose peripherals

#### Configurable

For general-purpose peripherals that may be configured for secure only access

The full list of peripherals and their corresponding security attributes can be found in [Memory map](#) on page 23. For each peripheral with ID  $n$ , `PERIPHID[n].PERM` will show whether the security attribute for this peripheral is configurable or not.

If not hardcoded, the security attribute can be configured using the `PERIPHID[id].PERM`.

At reset, all user-selectable and split security peripherals are set to be secure, with secure DMA where present.

Secure code can access both secure peripherals and non-secure peripherals.

The nRF9160 does not support runtime security configuration of peripherals. It is thus, advisable that all security settings on peripherals are set during boot time. Doing so will ensure the desired system security configuration is deployed simultaneously system-wide.

#### 6.15.4.1 Peripherals with split security

Peripherals with split security are defined to handle use-cases when both secure and non-secure code needs to control the same resource.

When peripherals with split security have their security attribute set to non-secure, access to specific registers and bitfields within some registers is dependent on the security attribute of the bus transfer. For example, some registers will not be accessible for a non-secure transfer.

When peripherals with split security have their security attribute set to secure, then only secure transfers can access their registers.

See [Instantiation](#) on page 24 for an overview of split security peripherals. Respective peripheral chapters explain the specific security behavior of each peripheral.

#### 6.15.4.2 Peripheral address mapping

Peripherals that have non-secure security mapping have their address starting with `0x4XXX_XXXX`. Peripherals that have secure security mapping have their address starting with `0x5XXX_XXXX`.

Peripherals with a user-selectable security mapping are available at an address starting with:

- 0x4XXX\_XXXX, if the peripheral security attribute is set to non-secure
- 0x5XXX\_XXXX, if the peripheral security attribute is set to secure

**Note:** Accesses to the 0x4XXX\_XXXX address range from secure or non-secure code for a peripheral marked as secure will result in a bus-error.

Secure code accessing the 0x5XXX\_XXXX address range of a peripheral marked as non-secure will also result in a bus-error.

Peripherals with a split security mapping are available at an address starting with:

- 0x4XXX\_XXXX for non-secure access and 0x5XXX\_XXXX for secure access, if the peripheral security attribute is set to non-secure
  - Secure registers in the 0x4XXX\_XXXX range are not visible for secure or non-secure code, and an attempt to access such a register will result in write-ignore, read-as-zero behavior
  - Secure code can access both non-secure and secure registers in the 0x5XXX\_XXXX range
- 0x5XXX\_XXXX, if the peripheral security attribute is set to secure

Any attempt to access the 0x5000\_0000-0x5FFF\_FFFF address range from non-secure code will be ignored and generate a SecureFault exception.

The table below illustrates the address mapping for the three type of peripherals in all possible configurations

| Security-features and configuration                  | Is mapped at 0x4XXX_XXXX?     | Is mapped at 0x5XXX_XXXX? |
|------------------------------------------------------|-------------------------------|---------------------------|
| Secure peripheral                                    | No                            | Yes                       |
| Non-secure peripheral                                | Yes                           | No                        |
| Split-security peripheral, with attribute=secure     | No                            | Yes                       |
| Split-security peripheral, with attribute=non-secure | Yes, restricted functionality | Yes                       |

Table 82: Peripheral's address mapping in relation to its security-features and configuration

### 6.15.4.3 Special considerations for peripherals with DMA master

Peripherals containing a DMA master can be configured so the security attribute of the DMA transfers is different from the security attribute of the peripheral itself. This allows a secure peripheral to do non-secure data transfers to or from the system memories.

The following conditions must be met:

- The DMA field of `PERIPHID[n].PERM.SECURITYMAPPING` should read as "SeparateAttribute"
- The peripheral itself should be secure (`PERIPHID[n].PERM.SECATTR == 1`)

Then it is possible to select the security attribute of the DMA transfers using the field `DMASEC` (`PERIPHID[n].PERM.DMASEC == Secure` and `PERIPHID[n].PERM.DMASEC == NonSecure`) in `PERIPHID[n].PERM`.

### 6.15.4.4 Peripheral access error reporting

Peripherals send error reports once access violation is detected.

The following will happen if the logic controlled by the SPU detects an access violation on one of the peripherals:

- The faulty transfer will be blocked
- In case of a read transfer, the bus will be driven to zero

- Feedback is sent to the master through specific bus error signals, if this is supported by the master. If the master is a processor supporting ARM TrustZone for Cortex-M, a SecureFault exception will be generated for security related errors.
- The PERIPHACCERR event will be triggered

### 6.15.5 Pin access control

Access to device pins can be controlled by the SPU. A pin can be declared as secure so that only secure peripherals or secure code can access it. Pins declared as non-secure can be accessed by both secure and non-secure peripherals or code.

The security attribute of each pin can be individually configured in SPU's `GPIOPORT[n].PERM` register. When the secure attribute is set for a pin, only peripherals that have the secure attribute set will be able to read the value of the pin or change it.

Peripherals can select the pin(s) they need access to through their PSEL register(s). If a peripheral has its attribute set to non-secure, but one of its PSEL registers selects a pin with the attribute set to secure, the SPU controlled logic will ensure that the pin selection is not propagated. In addition, the pin value will always be read as zero, to prevent a non-secure peripheral from obtaining a value from a secure pin. Whereas access to other pins with attribute set as non-secure will not be blocked.

Pins can be assigned to other domains than the application domain by changing the MCUSEL value in the GPIO `PIN_CNF[n]` register. Domains that do not have a pin assigned to them can neither control that pin nor read its status. Any pin configuration set in a domain that doesn't have ownership of that pin will not take effect until the MCUSEL is updated to assign that pin to the domain. Within each domain, pin access is controlled by that domain's local security configuration and peripheral PSEL registers. This is illustrated in the following figure:

**Note:** The SPU setting will still count when the APP domain accesses its local GPIO peripheral, as local registers are still writable even though MCUSEL is set to a different domain. Any changes in the APP GPIO peripheral done to a GPIO controlled by another domain will not affect the GPIO pad until MCUSEL is changed to APP.

Figure 85: Pin access for domains other than the application domain

### 6.15.6 DPPI access control

Access to DPPI channels can be restricted. A channel can be declared as secure so that only secure peripherals can access it.

The security attribute of a DPPI channel is configured in [DPPI\[n\].PERM \(n=0..0\)](#) on page 276. When the secure attribute is set for a channel, only peripherals that have the secure attribute set will be able to publish events to this channel or subscribe to this channel to receive tasks.

The DPPI controller peripheral (DPPIC) is a split security peripheral, i.e., its security behavior depends on the security attributes of both the DPPIC and the accessing party. See [Special considerations regarding the DPPIC configuration registers](#) on page 269 for more information about the DPPIC security behavior.

If a non-secure peripheral wants to publish an event on a secure DPPI channel, the channel will ignore the event. If a non-secure peripheral subscribes to a secure DPPI channel, it will not receive any events from this channel. The following figure illustrates the principle of operation of the security logic for a subscribed channel:

Figure 86: Subscribed channel security concept

No error reporting mechanism is associated with the DPPI access control logic.

#### 6.15.6.1 Special considerations regarding the DPPIC configuration registers

DPPI channels can be enabled, disabled and grouped through the DPPI controller (DPPIC). The DPPIC is a split-security peripheral, and handles both secure and non-secure accesses.

A non-secure peripheral access will only be able to configure and control DPPI channels defined as non-secure in SPU's [DPPI\[n\].PERM](#) register(s). A secure peripheral access can control all DPPI channels, independently of the configuration in the [DPPI\[n\].PERM](#) register(s).

The DPPIC allows the creation of group of channels to be able to enable or disable all channels within a group simultaneously. The security attribute of a group of channels (secure or non-secure) is defined as follows:

- If all channels (enabled or not) in the group are non-secure, then the group is considered non-secure
- If at least one of the channels (enabled or not) in the group is secure, then the group is considered secure

A non-secure access to a DPPIC register, or a bitfield controlling a channel marked as secure in [DPPI\[n\].PERM](#) register(s), will be ignored:

- Write accesses will have no effect

- Read will always return a zero value

No exceptions are thrown when a non-secure access targets a register or bitfield controlling a secure channel. For example, if the bit  $i$  is set in the `DPPI[n].PERM` register (declaring the DPPI channel  $i$  as secure), then:

- Non-secure write accesses to registers CHEN, CHENSET and CHENCLR will not be able to write to bit  $i$  of those registers
- Non-secure write accesses to registers `TASK_CHG[j].EN` and `TASK_CHG[j].DIS` will be ignored if the channel group  $j$  contains at least one channel defined as secure (it can be the channel  $i$  itself or any channel declared as secured)
- Non-secure read accesses to registers CHEN, CHENSET and CHENCLR will always read zero for the bit at position  $i$

For the channel configuration registers (`DPPIC.CHG[n]`), access from non-secure code is only possible if the included channels are all non-secure, whether the channels are enabled or not. If a `DPPIC.CHG[g]` register included one or more secure channels, then the group  $g$  is considered as secure and only a secure transfer can read or write `DPPIC.CHG[g]`. A non-secure write will be ignored and a non-secure read will return zero.

The DPPIC can subscribe to secure or non-secure channels through `SUBSCRIBE_CHG[n]` registers in order to trigger task for enabling or disabling groups of channels. But an event from a non-secure channel will be ignored if the group subscribing to this channel is secure. An event from a secure channel can trigger both secure and non-secure tasks.

### 6.15.7 External domain access control

Other domains with their own CPUs can access peripherals, flash and RAM memories. The SPU allows controlling accesses from those bus masters.

The external domains can access application MCU memories and peripherals. External domains are assigned security attributes as described in register `EXTDOMAIN[n].PERM`.

| Domain    | Capability register                 | Permission register |
|-----------|-------------------------------------|---------------------|
| LTE modem | Modem is always a non-secure domain | Not applicable      |

Table 83: Register mapping for external domains

The figure below illustrates how the security control units are used to assign security attributes to transfers initiated by the external domains:

Figure 87: Access control from external domains

### 6.15.8 TrustZone for Cortex-M ID allocation

Flash and RAM regions, as well as non-secure and secure peripherals, are assigned unique TrustZone IDs.

**Note:** TrustZone ID should not be confounded with the peripheral ID used to identify peripherals.

The table below shows the TrustZone ID allocation:

| Regions                | TrustZone Cortex-M ID |
|------------------------|-----------------------|
| Flash regions 0..31    | 0..31                 |
| RAM regions 0..15      | 64..79                |
| Non-secure peripherals | 253                   |
| Secure peripherals     | 254                   |

Table 84: TrustZone ID allocation

## 6.15.9 Registers

| Base address | Peripheral | Instance | Secure mapping | DMA security | Description            | Configuration |
|--------------|------------|----------|----------------|--------------|------------------------|---------------|
| 0x50003000   | SPU        | SPU      | S              | NA           | System Protection Unit |               |

Table 85: Instances

| Register             | Offset | Security | Description                                                                  |
|----------------------|--------|----------|------------------------------------------------------------------------------|
| EVENTS_RAMACCERR     | 0x100  |          | A security violation has been detected for the RAM memory space              |
| EVENTS_FLASHACCERR   | 0x104  |          | A security violation has been detected for the flash memory space            |
| EVENTS_PERIPHACCERR  | 0x108  |          | A security violation has been detected on one or several peripherals         |
| PUBLISH_RAMACCERR    | 0x180  |          | Publish configuration for event <a href="#">RAMACCERR</a>                    |
| PUBLISH_FLASHACCERR  | 0x184  |          | Publish configuration for event <a href="#">FLASHACCERR</a>                  |
| PUBLISH_PERIPHACCERR | 0x188  |          | Publish configuration for event <a href="#">PERIPHACCERR</a>                 |
| INTEN                | 0x300  |          | Enable or disable interrupt                                                  |
| INTENSET             | 0x304  |          | Enable interrupt                                                             |
| INTENCLR             | 0x308  |          | Disable interrupt                                                            |
| CAP                  | 0x400  |          | Show implemented features for the current device                             |
| EXTDOMAIN[n].PERM    | 0x440  |          | Access for bus access generated from the external domain n                   |
|                      |        |          | List capabilities of the external domain n                                   |
| DPPI[n].PERM         | 0x480  |          | Select between secure and non-secure attribute for the DPPI channels.        |
| DPPI[n].LOCK         | 0x484  |          | Prevent further modification of the corresponding PERM register              |
| GPIOPORT[n].PERM     | 0x4C0  |          | Select between secure and non-secure attribute for pins 0 to 31 of port n.   |
|                      |        |          | This register is retained.                                                   |
| GPIOPORT[n].LOCK     | 0x4C4  |          | Prevent further modification of the corresponding PERM register              |
| FLASHNSC[n].REGION   | 0x500  |          | Define which flash region can contain the non-secure callable (NSC) region n |
| FLASHNSC[n].SIZE     | 0x504  |          | Define the size of the non-secure callable (NSC) region n                    |
| RAMNSC[n].REGION     | 0x540  |          | Define which RAM region can contain the non-secure callable (NSC) region n   |
| RAMNSC[n].SIZE       | 0x544  |          | Define the size of the non-secure callable (NSC) region n                    |
| FLASHREGION[n].PERM  | 0x600  |          | Access permissions for flash region n                                        |
| RAMREGION[n].PERM    | 0x700  |          | Access permissions for RAM region n                                          |
| PERIPHID[n].PERM     | 0x800  |          | List capabilities and access permissions for the peripheral with ID n        |

Table 86: Register overview

### 6.15.9.1 EVENTS\_RAMACCERR

Address offset: 0x100

A security violation has been detected for the RAM memory space

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |   |   |   |   |   |   |   |  |  |  |  |  |  |  |

  | ID               |  |  |  | ### 6.15.9.13 DPPI[n].LOCK (n=0..0)

Address offset:  $0x484 + (n \times 0x8)$

Prevent further modification of the corresponding PERM register

#### 6.15.9.14 GPIOPORT[n].PERM (n=0..0) (Retained)

Select between secure and non-secure attribute for pins 0 to 31 of port n.

#### 6.15.9.15 GPIOPORT[n].LOCK (n=0..0)

Prevent further modification of the corresponding PERM register

#### 6.15.9.16 FLASHNSC[n].REGION (n=0..1)

Define which flash region can contain the non-secure callable (NSC) region n

#### 6.15.9.17 FLASHNSC[n].SIZE (n=0..1)

277

Address offset:  $0x800 + (n \times 0x4)$

**Note:** Reset values are unique per peripheral instantiation. Please refer to the peripheral instantiation table. Entries not listed in the instantiation table are undefined.

**Note:** This bit has effect only if  
PERIPHID[n].PERM.SECUREMAPPING reads as  
UserSelectable or Split

This peripheral is a general purpose timer designed to keep track of time in user-selective time intervals, it can operate in two modes: timer and counter.

The timer/counter runs on the high-frequency clock source (HFCLK) and includes a four-bit (1/2X) prescaler that can divide the timer input clock from the HFCLK controller. Clock source selection between PCLK16M and PCLK1M is automatic according to TIMER base frequency set by the prescaler. The TIMER base frequency is always given as 16 MHz divided by the prescaler value.

TIMER can operate in two modes: Timer mode and Counter mode. In both modes, TIMER is started by triggering the START task, and stopped by triggering the STOP task. After the timer is stopped the timer can resume timing/counting by triggering the START task again. When timing/counting is resumed, the timer will continue from the value it had prior to being stopped.

In Timer mode, the TIMER's internal Counter register is incremented by one for every tick of the timer frequency  $f_{\text{TIMER}}$  as illustrated in [Block schematic for timer/counter](#) on page 281. The timer frequency is derived from PCLK16M as shown in the following example, using the values specified in the PRESCALER register.

$$f_{\text{TIMER}} = 16 \text{ MHz} / (2^{\text{PRESCALER}})$$

When  $f_{\text{TIMER}} \leq 1 \text{ MHz}$ , TIMER will use PCLK1M instead of PCLK16M for reduced power consumption.

In counter mode, the TIMER's internal Counter register is incremented by one each time the COUNT task is triggered, meaning the timer frequency and the prescaler are not utilized in counter mode. Similarly, the COUNT task has no effect in Timer mode.

The TIMER's maximum value is configured by changing the bit-width of the timer in register [BITMODE](#) on page 289.

[PRESCALER](#) on page 289 and [BITMODE](#) on page 289 must only be updated when the timer is stopped. If these registers are updated while the timer is started, unpredictable behavior may occur.

When the timer is incremented beyond its maximum value, the Counter register will overflow and the timer will automatically start over from zero.

The Counter register can be cleared by triggering the CLEAR task. This will explicitly set the internal value to zero.

TIMER implements multiple capture/compare registers.

Independent of prescaler setting, the accuracy of TIMER is equivalent to one tick of the timer frequency  $f_{\text{TIMER}}$  as illustrated in [Block schematic for timer/counter](#) on page 281.

### 6.16.1 Capture

TIMER implements one capture task for every available capture/compare register.

Every time the CAPTURE[n] task is triggered, the Counter value is copied to the CC[n] register.

### 6.16.2 Compare

TIMER implements one COMPARE event for every available capture/compare register.

A COMPARE event is generated when the Counter is incremented and then becomes equal to the value specified in one of the capture compare registers. When the Counter value becomes equal to the value specified in a capture compare register CC[n], the corresponding compare event COMPARE[n] is generated.

[BITMODE](#) on page 289 specifies how many bits of the Counter register and the capture/compare register that are used when the comparison is performed. Other bits will be ignored.

The COMPARE event can be configured to operate in one-shot mode by configuring the corresponding ONESHOTEN[n] register. COMPARE[n] event is generated the first time the Counter matches CC[n] after CC[n] has been written.

### 6.16.3 Task delays

After TIMER is started, the CLEAR, COUNT, and STOP tasks are guaranteed to take effect within one clock cycle of the PCLK16M.

### 6.16.4 Task priority

If the START task and the STOP task are triggered at the same time, meaning within the same period of PCLK16M, the STOP task will be prioritized.

If one or more of the CAPTURE tasks and the CLEAR task is triggered at the same time, that is, within the same period of PCLK16M, the CLEAR task will be prioritized. This means that the CC register for the relevant CAPTURE task will be set to 0.

## 6.16.5 Registers

| Base address             | Peripheral | Instance    | Secure mapping | DMA security | Description | Configuration |

## 6.16.6 Electrical specification

## 6.17 TWIM — I<sup>2</sup>C compatible two-wire interface master with EasyDMA

TWI master with EasyDMA (TWIM) is a two-wire half-duplex master which can communicate with multiple slave devices connected to the same bus.

Listed here are the main features for TWIM:

- I<sup>2</sup>C compatible
- Supported baud rates: 100, 250, 400 kbps
- Support for clock stretching (non I<sup>2</sup>C compliant)
- EasyDMA

The two-wire interface can communicate with a bi-directional wired-AND bus with two lines (SCL, SDA). The protocol makes it possible to interconnect up to 127 individually addressable devices. TWIM is not compatible with CBUS.

The GPIOs used for each two-wire interface line can be chosen from any GPIO on the device and are independently configurable. This enables great flexibility in device pinout and efficient use of board space and signal routing.

Figure 89: TWI master with EasyDMA

A typical TWI setup consists of one master and one or more slaves. For an example, see the following figure. This TWIM is only able to operate as a single master on the TWI bus. Multi-master bus configuration is not supported.

Figure 90: A typical TWI setup comprising one master and three slaves

This TWI master supports clock stretching performed by the slaves. The SCK pulse following a stretched clock cycle may be shorter than specified by the I2C specification.

The TWI master is started by triggering the STARTTX or STARTRX tasks, and stopped by triggering the STOP task. The TWI master will generate a STOPPED event when it has stopped following a STOP task.

After the TWI master is started, the STARTTX or STARTRX tasks should not be triggered again until the TWI master has issued a LASTRX, LASTTX, or STOPPED event.

The TWI master can be suspended using the SUSPEND task, this can be used when using the TWI master in a low priority interrupt context. When the TWIM enters suspend state, will automatically issue a SUSPENDED event while performing a continuous clock stretching until it is instructed to resume operation via a RESUME task. The TWI master cannot be stopped while it is suspended, thus the STOP task has to be issued after the TWI master has been resumed.

**Note:** Any ongoing byte transfer will be allowed to complete before the suspend is enforced. A SUSPEND task has no effect unless the TWI master is actively involved in a transfer.

If a NACK is clocked in from the slave, the TWI master will generate an ERROR event.

### 6.17.1 Shared resources

The TWI master shares registers and other resources with other peripherals that have the same ID as the TWI master. Therefore, you must disable all peripherals that have the same ID as the TWI master before the TWI master can be configured and used.

Disabling a peripheral that has the same ID as the TWI master will not reset any of the registers that are shared with the TWI master. It is therefore important to configure all relevant registers explicitly to secure that the TWI master operates correctly.

The Instantiation table in [Instantiation](#) on page 24 shows which peripherals have the same ID as the TWI.

### 6.17.2 EasyDMA

The TWIM implements EasyDMA for accessing RAM without CPU involvement.

The TWIM peripheral implements the EasyDMA channels found in the following table.

| Channel | Type   | Register Cluster |
|---------|--------|------------------|
| TXD     | READER | TXD              |
| RXD     | WRITER | RXD              |

Table 89: TWIM EasyDMA Channels

For detailed information regarding the use of EasyDMA, see [EasyDMA](#) on page 45.

The .PTR and .MAXCNT registers are double-buffered. They can be updated and prepared for the next RX/TX transmission immediately after having received the RXSTARTED/TXSTARTED event.

The STOPPED event indicates that EasyDMA has finished accessing the buffer in RAM.

### 6.17.3 Master write sequence

A TWI master write sequence is started by triggering the STARTTX task. After the STARTTX task has been triggered, the TWI master will generate a start condition on the TWI bus, followed by clocking out the address and the READ/WRITE bit set to 0 (WRITE=0, READ=1).

The address must match the address of the slave device that the master wants to write to. The READ/WRITE bit is followed by an ACK/NACK bit (ACK=0 or NACK=1) generated by the slave.

After receiving the ACK bit, the TWI master will clock out the data bytes found in the transmit buffer located in RAM at the address specified in the TXD.PTR register. Each byte clocked out from the master will be followed by an ACK/NACK bit clocked in from the slave.

A typical TWI master write sequence is shown in the following figure. Occurrence 2 in the figure illustrates clock stretching performed by the TWI master following a SUSPEND task.

A SUSPENDED event indicates that the SUSPEND task has taken effect. This event can be used to synchronize the software.

The TWI master will generate a LASTTX event when it starts to transmit the last byte, this is shown in the following figure.

Figure 91: TWI master writing data to a slave

The TWI master is stopped by triggering the STOP task. This task should be triggered during the transmission of the last byte to secure that the TWI master will stop as fast as possible after sending the last byte. The shortcut between LASTTX and STOP can alternatively be used to accomplish this.

**Note:** The TWI master does not stop by itself when the entire RAM buffer has been sent, or when an error occurs. The STOP task must be issued, through the use of a local or PPI shortcut, or in software as part of the error handler.

#### 6.17.4 Master read sequence

A TWI master read sequence is started by triggering the STARTRX task. After the STARTRX task has been triggered, the TWI master will generate a start condition on the TWI bus, followed by clocking out the address and the READ/WRITE bit set to 1 (WRITE = 0, READ = 1). The address must match the address of the slave device that the master wants to read from. The READ/WRITE bit is followed by an ACK/NACK bit (ACK=0 or NACK = 1) generated by the slave.

After sending the ACK bit, the TWI slave will send data to the master using the clock generated by the master.

Data received will be stored in RAM at the address specified in the RXD.PTR register. The TWI master will generate an ACK after all but the last byte have been received from the slave. The TWI master will generate a NACK after the last byte received to indicate that the read sequence shall stop.

A typical TWI master read sequence is illustrated in [The TWI master reading data from a slave](#) on page 294. Occurrence 2 in the figure illustrates clock stretching performed by the TWI master following a SUSPEND task.

A SUSPENDED event indicates that the SUSPEND task has taken effect. This event can be used to synchronize the software.

The TWI master will generate a LASTRX event when it is ready to receive the last byte, as shown in [The TWI master reading data from a slave](#) on page 294. If RXD.MAXCNT > 1, the LASTRX event is generated after sending the ACK of the previously received byte. If RXD.MAXCNT = 1, the LASTRX event is generated after receiving the ACK following the address and READ bit.

The TWI master is stopped by triggering the STOP task. This task must be triggered before the NACK bit is supposed to be transmitted. The STOP task can be triggered at any time during the reception of the last byte. It is recommended to use the shortcut between LASTRX and STOP to accomplish this.

The TWI master does not stop by itself when the RAM buffer is full, or when an error occurs. The STOP task must be issued, through the use of a local or PPI shortcut, or in software as part of the error handler.

The TWI master cannot be stopped while suspended, so the STOP task must be issued after the TWI master has been resumed.

Figure 92: The TWI master reading data from a slave

### 6.17.5 Master repeated start sequence

A typical repeated start sequence is one in which the TWI master writes two bytes to the slave followed by reading four bytes from the slave. This example uses shortcuts to perform the simplest type of repeated start sequence, i.e. one write followed by one read. The same approach can be used to perform a repeated start sequence where the sequence is read followed by write.

The following figure shows an example of a repeated start sequence where the TWI master writes two bytes followed by reading four bytes from the slave.

Figure 93: Master repeated start sequence

If a more complex repeated start sequence is needed, and the TWI firmware driver is serviced in a low priority interrupt, it may be necessary to use the SUSPEND task and SUSPENDED event to guarantee that the correct tasks are generated at the correct time. A double repeated start sequence using the SUSPEND task to secure safe operation in low priority interrupts is shown in the following figure.

Figure 94: Double repeated start sequence

### 6.17.6 Low power

When putting the system in low power and the peripheral is not needed, lowest possible power consumption is achieved by stopping, and then disabling the peripheral.

When the STOP task is sent, the software shall wait until the STOPPED event is received as a response before disabling the peripheral through the ENABLE register. If the peripheral is already stopped, the STOP task is not required.

### 6.17.7 Master mode pin configuration

The SCL and SDA signals associated with the TWI master are mapped to physical pins according to the configuration specified in the PSEL.SCL and PSEL.SDA registers respectively.

The PSEL.SCL and PSEL.SDA registers and their configurations are only used as long as the TWI master is enabled, and retained only as long as the device is in ON mode. When the peripheral is disabled, the pins will behave as regular GPIOs, and use the configuration in their respective OUT bit field and PIN\_CNF[n] register. PSEL.SCL, PSEL.SDA must only be configured when the TWI master is disabled.

To secure correct signal levels on the pins used by the TWI master when the system is in OFF mode, and when the TWI master is disabled, these pins must be configured in the GPIO peripheral as described in the following table.

Only one peripheral can be assigned to drive a particular GPIO pin at a time. Failing to do so may result in unpredictable behavior.

| TWI master signal | TWI master pin           | Direction | Output value   | Drive strength |
|-------------------|--------------------------|-----------|----------------|----------------|
| SCL               | As specified in PSEL.SCL | Input     | Not applicable | S0D1           |
| SDA               | As specified in PSEL.SDA | Input     | Not applicable | S0D1           |

Table 90: GPIO configuration before enabling peripheral

  ## 6.17.9 Electrical specification

### 6.17.9.1 TWIM interface electrical specifications

| Symbol                  | Description                                            | Min. | Typ.  | Max. | Units         |
|-------------------------|--------------------------------------------------------|------|-------|------|---------------|
| $f_{\text{TWIM,SCL}}$   | Bit rates for TWIM <sup>18</sup>                       | 100  |       | 400  | kbps          |
| $t_{\text{TWIM,START}}$ | Time from STARTRX/STARTTX task to transmission started |      | 1.615 |      | $\mu\text{s}$ |

### 6.17.9.2 Two Wire Interface Master (TWIM) timing specifications

| Symbol                            | Description                                                            | Min.  | Typ. | Max. | Units |
|-----------------------------------|------------------------------------------------------------------------|-------|------|------|-------|
| $t_{\text{TWIM,SU\_DAT}}$         | Data setup time before positive edge on SCL – all modes                | 300   |      |      | ns    |
| $t_{\text{TWIM,HD\_DAT}}$         | Data hold time after negative edge on SCL – 100, 250 and 400 kbps      | 500   |      |      | ns    |
| $t_{\text{TWIM,HD\_STA,100kbps}}$ | TWIM master hold time for START and repeated START condition, 100 kbps | 10000 |      |      | ns    |
| $t_{\text{TWIM,HD\_STA,250kbps}}$ | TWIM master hold time for START and repeated START condition, 250 kbps | 4000  |      |      | ns    |
| $t_{\text{TWIM,HD\_STA,400kbps}}$ | TWIM master hold time for START and repeated START condition, 400 kbps | 2500  |      |      | ns    |
| $t_{\text{TWIM,SU\_STO,100kbps}}$ | TWIM master setup time from SCL high to STOP condition, 100 kbps       | 5000  |      |      | ns    |
| $t_{\text{TWIM,SU\_STO,250kbps}}$ | TWIM master setup time from SCL high to STOP condition, 250 kbps       | 2000  |      |      | ns    |
| $t_{\text{TWIM,SU\_STO,400kbps}}$ | TWIM master setup time from SCL high to STOP condition, 400 kbps       | 1250  |      |      | ns    |
| $t_{\text{TWIM,BUF,100kbps}}$     | TWIM master bus free time between STOP and START conditions, 100 kbps  | 5800  |      |      | ns    |
| $t_{\text{TWIM,BUF,250kbps}}$     | TWIM master bus free time between STOP and START conditions, 250 kbps  | 2700  |      |      | ns    |
| $t_{\text{TWIM,BUF,400kbps}}$     | TWIM master bus free time between STOP and START conditions, 400 kbps  | 2100  |      |      | ns    |

Figure 95: TWIM timing diagram, 1 byte transaction

<sup>18</sup> High bit rates or stronger pull-ups may require GPIOs to be set as High Drive, see [GPIO — General purpose input/output](#) on page 97 for more details.

### 6.17.10 Pullup resistor

Figure 96: Recommended TWIM pullup value vs. line capacitance

- The I2C specification allows a line capacitance of 400 pF at most.
- The value of internal pullup resistor ( $R_{PU}$ ) for nRF9160 can be found in [GPIO — General purpose input/output](#) on page 97.

## 6.18 TWIS — I<sup>2</sup>C compatible two-wire interface slave with EasyDMA

TWI slave with EasyDMA (TWIS) is compatible with I<sup>2</sup>C operating at 100 kHz and 400 kHz. The TWI transmitter and receiver implement EasyDMA.

Figure 97: TWI slave with EasyDMA

A typical TWI setup consists of one master and one or more slaves. For an example, see the following figure. TWIS is only able to operate with a single master on the TWI bus.

Figure 98: A typical TWI setup comprising one master and three slaves

The following figure shows the TWI slave state machine.

Figure 99: TWI slave state machine

The following table contains descriptions of the symbols used in the state machine.

| Symbol            | Type         | Description                                                                                                                    |
|-------------------|--------------|--------------------------------------------------------------------------------------------------------------------------------|
| ENABLE            | Register     | The TWI slave has been enabled via the <a href="#">ENABLE</a> register.                                                        |
| PREPARETX         | Task         | The <a href="#">TASKS_PREPARETX</a> task has been triggered.                                                                   |
| STOP              | Task         | The <a href="#">TASKS_STOP</a> task has been triggered.                                                                        |
| PREPARERX         | Task         | The <a href="#">TASKS_PREPARERX</a> task has been triggered.                                                                   |
| STOPPED           | Event        | The <a href="#">EVENTS_STOPPED</a> event was generated.                                                                        |
| RXSTARTED         | Event        | The <a href="#">EVENTS_RXSTARTED</a> event was generated.                                                                      |
| TXSTARTED         | Event        | The <a href="#">EVENTS_TXSTARTED</a> event was generated.                                                                      |
| TX prepared       | Internal     | Internal flag indicating that a <a href="#">TASKS_PREPARETX</a> task has been triggered. This flag is not visible to the user. |
| RX prepared       | Internal     | Internal flag indicating that a <a href="#">TASKS_PREPARERX</a> task has been triggered. This flag is not visible to the user. |
| Unprepare TX      | Internal     | Clears the internal 'TX prepared' flag until next <a href="#">TASKS_PREPARETX</a> task.                                        |
| Unprepare RX      | Internal     | Clears the internal 'RX prepared' flag until next <a href="#">TASKS_PREPARERX</a> task.                                        |
| Stop condition    | TWI protocol | A TWI stop condition was detected.                                                                                             |
| Restart condition | TWI protocol | A TWI restart condition was detected.                                                                                          |

Table 93: TWI slave state machine symbols

The TWI slave can perform clock stretching, with the premise that the master is able to support it.

The TWI slave operates in a low power mode while waiting for a TWI master to initiate a transfer. As long as the TWI slave is not addressed, it will remain in this low power mode.

To secure correct behavior of the TWI slave, PSEL.SCL, PSEL.SDA, CONFIG, and the ADDRESS[n] registers must be configured prior to enabling the TWI slave through the ENABLE register. Similarly, changing these settings must be performed while the TWI slave is disabled. Failing to do so may result in unpredictable behavior.

### 6.18.1 Shared resources

The TWI slave shares registers and other resources with other peripherals that have the same ID as the TWI slave.

Therefore, you must disable all peripherals that have the same ID as the TWI slave before the TWI slave can be configured and used. Disabling a peripheral that has the same ID as the TWI slave will not reset any of the registers that are shared with the TWI slave. It is therefore important to configure all relevant registers explicitly to secure that the TWI slave operates correctly.

The Instantiation table in [Instantiation](#) on page 24 shows which peripherals have the same ID as the TWI slave.

### 6.18.2 EasyDMA

The TWIS implements EasyDMA for accessing RAM without CPU involvement.

The following table shows the Easy DMA channels that the TWIS peripheral implements.

| Channel | Type   | Register Cluster    |
|---------|--------|---------------------|
| TXD     | READER | <a href="#">TXD</a> |
| RXD     | WRITER | <a href="#">RXD</a> |

Table 94: TWIS EasyDMA Channels

For detailed information regarding the use of EasyDMA, see [EasyDMA](#) on page 45.

The STOPPED event indicates that EasyDMA has finished accessing the buffer in RAM.

### 6.18.3 TWI slave responding to a read command

Before the TWI slave can respond to a read command, the TWI slave must be configured correctly and enabled via the ENABLE register. When enabled, the TWI slave will be in its IDLE state. .

A read command is started when the TWI master generates a start condition on the TWI bus, followed by clocking out the address and the READ/WRITE bit set to 1 (WRITE=0, READ=1). The READ/WRITE bit is followed by an ACK/NACK bit (ACK=0 or NACK=1) response from the TWI slave.

The TWI slave is able to listen for up to two addresses at the same time. This is configured in the ADDRESS registers and the CONFIG register.

The TWI slave will only acknowledge (ACK) the read command if the address presented by the master matches one of the addresses the slave is configured to listen for. The TWI slave will generate a READ event when it acknowledges the read command.

The TWI slave is only able to detect a read command from the IDLE state.

The TWI slave will set an internal 'TX prepared' flag when the PREPARETX task is triggered.

When the read command is received, the TWI slave will enter the TX state if the internal 'TX prepared' flag is set.

If the internal 'TX prepared' flag is not set when the read command is received, the TWI slave will stretch the master's clock until the PREPARETX task is triggered and the internal 'TX prepared' flag is set.

The TWI slave will generate the TXSTARTED event and clear the 'TX prepared' flag ('unprepare TX') when it enters the TX state. In this state the TWI slave will send the data bytes found in the transmit buffer to the master using the master's clock.

The TWI slave will go back to the IDLE state if the TWI slave receives a restart command when it is in the TX state.

The TWI slave is stopped when it receives the stop condition from the TWI master. A STOPPED event will be generated when the transaction has stopped. The TWI slave will clear the 'TX prepared' flag ('unprepare TX') and go back to the IDLE state when it has stopped.

The transmit buffer is located in RAM at the address specified in the TXD.PTR register. The TWI slave will only be able to send TXD.MAXCNT bytes from the transmit buffer for each transaction. If the TWI master forces the slave to send more than TXD.MAXCNT bytes, the slave will send the byte specified in the ORC register to the master instead. If this happens, an ERROR event will be generated.

The EasyDMA configuration registers, see TXD.PTR etc., are latched when the TXSTARTED event is generated.

The TWI slave can be forced to stop by triggering the STOP task. A STOPPED event will be generated when the TWI slave has stopped. The TWI slave will clear the 'TX prepared' flag and go back to the IDLE state when it has stopped, see also [Terminating an ongoing TWI transaction](#) on page 317.

Each byte sent from the slave will be followed by an ACK/NACK bit sent from the master. The TWI master will generate a NACK following the last byte that it wants to receive to tell the slave to release the bus so that the TWI master can generate the stop condition. The TXD.AMOUNT register can be queried after a transaction to see how many bytes were sent.

A typical TWI slave read command response is shown in the following figure. Occurrence 2 in the figure illustrates clock stretching performed by the TWI slave following a SUSPEND task.

Figure 100: The TWI slave responding to a read command

#### 6.18.4 TWI slave responding to a write command

Before the TWI slave can respond to a write command, the TWI slave must be configured correctly and enabled via the ENABLE register. When enabled, the TWI slave will be in its IDLE state.

A write command is started when the TWI master generates a start condition on the TWI bus, followed by clocking out the address and the READ/WRITE bit set to 0 (WRITE=0, READ=1). The READ/WRITE bit is followed by an ACK/NACK bit (ACK=0 or NACK=1) response from the slave.

The TWI slave is able to listen for up to two addresses at the same time. This is configured in the ADDRESS registers and the CONFIG register.

The TWI slave will only acknowledge (ACK) the write command if the address presented by the master matches one of the addresses the slave is configured to listen for. The TWI slave will generate a WRITE event if it acknowledges the write command.

The TWI slave is only able to detect a write command from the IDLE state.

The TWI slave will set an internal 'RX prepared' flag when the PREPARERX task is triggered.

When the write command is received, the TWI slave will enter the RX state if the internal 'RX prepared' flag is set.

If the internal 'RX prepared' flag is not set when the write command is received, the TWI slave will stretch the master's clock until the PREPARERX task is triggered and the internal 'RX prepared' flag is set.

The TWI slave will generate the RXSTARTED event and clear the internal 'RX prepared' flag ('unprepare RX') when it enters the RX state. In this state, the TWI slave will be able to receive the bytes sent by the TWI master.

The TWI slave will go back to the IDLE state if the TWI slave receives a restart command when it is in the RX state.

The TWI slave is stopped when it receives the stop condition from the TWI master. A STOPPED event will be generated when the transaction has stopped. The TWI slave will clear the internal 'RX prepared' flag ('unprepare RX') and go back to the IDLE state when it has stopped.

The receive buffer is located in RAM at the address specified in the RXD.PTR register. The TWI slave will only be able to receive as many bytes as specified in the RXD.MAXCNT register. If the TWI master tries to send more bytes to the slave than it can receive, the extra bytes are discarded and NACKed by the slave. If this happens, an ERROR event will be generated.

The EasyDMA configuration registers, see RXD.PTR etc., are latched when the RXSTARTED event is generated.

The TWI slave can be forced to stop by triggering the STOP task. A STOPPED event will be generated when the TWI slave has stopped. The TWI slave will clear the internal 'RX prepared' flag and go back to the IDLE state when it has stopped, see also [Terminating an ongoing TWI transaction](#) on page 317.

The TWI slave will generate an ACK after every byte received from the master. The RXD.AMOUNT register can be queried after a transaction to see how many bytes were received.

A typical TWI slave write command response is shown in the following figure. Occurrence 2 in the figure illustrates clock stretching performed by the TWI slave following a SUSPEND task.

Figure 101: The TWI slave responding to a write command

### 6.18.5 Master repeated start sequence

An example of a repeated start sequence is one in which the TWI master writes two bytes to the slave followed by reading four bytes from the slave.

This is illustrated in the following figure.

In this example, the receiver does not know what the master wants to read in advance. This information is in the first two received bytes of the write in the repeated start sequence. To guarantee that the CPU is able to process the received data before the TWI slave starts to reply to the read command, the SUSPEND task is triggered via a shortcut from the READ event generated when the read command is received. When the CPU has processed the incoming data and prepared the correct data response, the CPU will resume the transaction by triggering the RESUME task.

Figure 102: Repeated start sequence

### 6.18.6 Terminating an ongoing TWI transaction

In some situations, e.g. if the external TWI master is not responding correctly, it may be required to terminate an ongoing transaction.

This can be achieved by triggering the STOP task. In this situation, a STOPPED event will be generated when the TWI has stopped independent of whether or not a STOP condition has been generated on the TWI bus. The TWI slave will release the bus when it has stopped and go back to its IDLE state.

### 6.18.7 Low power

When putting the system in low power and the peripheral is not needed, lowest possible power consumption is achieved by stopping, and then disabling the peripheral.

The STOP task may not be always needed (the peripheral might already be stopped), but if it is sent, software shall wait until the STOPPED event was received as a response before disabling the peripheral through the ENABLE register.

### 6.18.8 Slave mode pin configuration

The SCL and SDA signals associated with the TWI slave are mapped to physical pins according to the configuration specified in the PSEL.SCL and PSEL.SDA registers respectively.

The PSEL.SCL and PSEL.SDA registers and their configurations are only used as long as the TWI slave is enabled, and retained only as long as the device is in ON mode. When the peripheral is disabled, the pins will behave as regular GPIOs, and use the configuration in their respective OUT bit field and PIN\_CNF[n] register. PSEL.SCL and PSEL.SDA must only be configured when the TWI slave is disabled.

To secure correct signal levels on the pins used by the TWI slave when the system is in OFF mode, and when the TWI slave is disabled, these pins must be configured in the GPIO peripheral as described in the following table.

Only one peripheral can be assigned to drive a particular GPIO pin at a time. Failing to do so may result in unpredictable behavior.

| TWI slave signal | TWI slave pin            | Direction | Output value   | Drive strength |
|------------------|--------------------------|-----------|----------------|----------------|
| SCL              | As specified in PSEL.SCL | Input     | Not applicable | S0D1           |
| SDA              | As specified in PSEL.SDA | Input     | Not applicable | S0D1           |

Table 95: GPIO configuration before enabling peripheral

### 6.18.9 Registers

| Base address             | Peripheral | Instance   | Secure mapping | DMA security | Description                | Configuration |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |   |  |  |  | | ID               |  |  |  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |   |  |  |  |   |  |  |  |   |  |  |            ## 6.18.10 Electrical specification

### 6.18.10.1 TWIS slave timing specifications

| Symbol                            | Description                                                                 | Min. | Typ. | Max. | Units         |
|-----------------------------------|-----------------------------------------------------------------------------|------|------|------|---------------|
| $f_{\text{TWIS,SCL}}$             | Bit rates for TWIS <sup>19</sup>                                            | 100  |      | 400  | kbps          |
| $t_{\text{TWIS,START}}$           | Time from PREPARERX/PREPARETX task to ready to receive/transmit             |      | 1.5  |      | $\mu\text{s}$ |
| $t_{\text{TWIS,SU\_DAT}}$         | Data setup time before positive edge on SCL – all modes                     | 300  |      |      | ns            |
| $t_{\text{TWIS,HD\_DAT}}$         | Data hold time after negative edge on SCL – all modes                       | 500  |      |      | ns            |
| $t_{\text{TWIS,HD\_STA,100kbps}}$ | TWI slave hold time from for START condition (SDA low to SCL low), 100 kbps | 5200 |      |      | ns            |
| $t_{\text{TWIS,HD\_STA,400kbps}}$ | TWI slave hold time from for START condition (SDA low to SCL low), 400 kbps | 1300 |      |      | ns            |
| $t_{\text{TWIS,SU\_STO,100kbps}}$ | TWI slave setup time from SCL high to STOP condition, 100 kbps              | 5200 |      |      | ns            |
| $t_{\text{TWIS,SU\_STO,400kbps}}$ | TWI slave setup time from SCL high to STOP condition, 400 kbps              | 1300 |      |      | ns            |
| $t_{\text{TWIS,BUF,100kbps}}$     | TWI slave bus free time between STOP and START conditions, 100 kbps         |      | 4700 |      | ns            |
| $t_{\text{TWIS,BUF,400kbps}}$     | TWI slave bus free time between STOP and START conditions, 400 kbps         |      | 1300 |      | ns            |

Figure 103: TWIS timing diagram, 1 byte transaction

## 6.19 UARTE — Universal asynchronous receiver/transmitter with EasyDMA

The Universal asynchronous receiver/transmitter with EasyDMA (UARTE) offers fast, full-duplex, asynchronous serial communication with built-in flow control (CTS, RTS) support in hardware at a rate up to 1 Mbps, and EasyDMA data transfer from/to RAM.

Listed here are the main features for UARTE:

- Full-duplex operation
- Automatic hardware flow control
- Optional even parity bit checking and generation
- EasyDMA
- Up to 1 Mbps baudrate
- Return to IDLE between transactions supported (when using HW flow control)
- One or two stop bit
- Least significant bit (LSB) first

<sup>19</sup> High bit rates or stronger pull-ups may require GPIOs to be set as High Drive, see [GPIO](#) chapter for more details.

Figure 104: UARTE configuration

The GPIOs used for each UART interface can be chosen from any GPIO on the device and are independently configurable. This enables great flexibility in device pinout and efficient use of board space and signal routing.

**Note:** The external crystal oscillator must be enabled to obtain sufficient clock accuracy for stable communication. See [CLOCK — Clock control](#) on page 70 for more information.

### 6.19.1 EasyDMA

The UARTE implements EasyDMA for reading and writing to and from the RAM.

If the TXD.PTR and the RXD.PTR are not pointing to the Data RAM region, an EasyDMA transfer may result in a HardFault or RAM corruption. See [Memory](#) on page 21 for more information about the different memory regions.

The .PTR and .MAXCNT registers are double-buffered. They can be updated and prepared for the next RX/TX transmission immediately after having received the RXSTARTED/TXSTARTED event.

The ENDRX and ENDTX events indicate that the EasyDMA is finished accessing the RX or TX buffer in RAM.

### 6.19.2 Transmission

The first step of a DMA transmission is storing bytes in the transmit buffer and configuring EasyDMA. This is achieved by writing the initial address pointer to TXD.PTR, and the number of bytes in the RAM buffer to TXD.MAXCNT. The UARTE transmission is started by triggering the STARTTX task.

After each byte has been sent over the TXD line, a TXDRDY event will be generated.

When all bytes in the TXD buffer, as specified in the TXD.MAXCNT register, have been transmitted, the UARTE transmission will end automatically and an ENDTX event will be generated.

A UARTE transmission sequence is stopped by triggering the STOPTX task. A TXSTOPPED event will be generated when the UARTE transmitter has stopped.

If the ENDTX event has not already been generated when the UARTE transmitter has come to a stop, the UARTE will generate the ENDTX event explicitly even though all bytes in the TXD buffer, as specified in the TXD.MAXCNT register, have not been transmitted.

If flow control is enabled through the HWFC field in the CONFIG register, a transmission will be automatically suspended when CTS is deactivated and resumed when CTS is activated again, as shown in the following figure. A byte that is in transmission when CTS is deactivated will be fully transmitted before the transmission is suspended.

Figure 105: UART transmission

The UART transmitter will be in its lowest activity level, and consume the least amount of energy, when it is stopped, i.e. before it is started via STARTTX or after it has been stopped via STOPTX and the TXSTOPPED event has been generated. See [POWER — Power control](#) on page 64 for more information about power modes.

### 6.19.3 Reception

The UART receiver is started by triggering the STARTRX task. The UART receiver is using EasyDMA to store incoming data in an RX buffer in RAM.

The RX buffer is located at the address specified in the RXD.PTR register. The RXD.PTR register is double-buffered and it can be updated and prepared for the next STARTRX task immediately after the RXSTARTED event is generated. The size of the RX buffer is specified in the RXD.MAXCNT register. The UART generates an ENDRX event when it has filled up the RX buffer, as seen in the following figure.

For each byte received over the RXD line, an RXDRDY event will be generated. This event is likely to occur before the corresponding data has been transferred to Data RAM.

The RXD.AMOUNT register can be queried following an ENDRX event to see how many new bytes have been transferred to the RX buffer in RAM since the previous ENDRX event.

Figure 106: UARTE reception

The UARTE receiver is stopped by triggering the STOPRX task. An RXTO event is generated when the UARTE has stopped. The UARTE will make sure that an impending ENDRX event will be generated before the RXTO event is generated. This means that the UARTE will guarantee that no ENDRX event will be generated after RXTO, unless the UARTE is restarted or a FLUSHRX command is issued after the RXTO event is generated.

**Note:** If the ENDRX event has not been generated when the UARTE receiver stops, indicating that all pending content in the RX FIFO has been moved to the RX buffer, the UARTE will generate the ENDRX event explicitly even though the RX buffer is not full. In this scenario the ENDRX event will be generated before the RXTO event is generated.

To determine the amount of bytes the RX buffer has received, the CPU can read the RXD.AMOUNT register following the ENDRX event or the RXT0 event.

The UARTE is able to receive up to four bytes after the STOPRX task has been triggered, as long as these are sent in succession immediately after the RTS signal is deactivated. After the RTS is deactivated, the UART is able to receive bytes for a period of time equal to the time needed to send four bytes on the configured baud rate.

After the RXTO event is generated the internal RX FIFO may still contain data, and to move this data to RAM the FLUSHRX task must be triggered. To make sure that this data does not overwrite data in the RX buffer, the RX buffer should be emptied or the RXD.PTR should be updated before the FLUSHRX task is triggered. To make sure that all data in the RX FIFO is moved to the RX buffer, the RXD.MAXCNT register must be set to  $RXD.MAXCNT > 4$ , as seen in the following figure. The UARTE will generate the ENDRX event after completing the FLUSHRX task even if the RX FIFO was empty or if the RX buffer does not get filled up. To be able to know how many bytes have actually been received into the RX buffer in this case, the CPU can read the RXD.AMOUNT register following the ENDRX event.

Figure 107: UARTE reception with forced stop via STOPRX

If HW flow control is enabled through the HWFC field in the CONFIG register, the RTS signal will be deactivated when the receiver is stopped via the STOPRX task or when the UARTE is only able to receive four more bytes in its internal RX FIFO.

With flow control disabled, the UARTE will function in the same way as when the flow control is enabled except that the RTS line will not be used. This means that no signal will be generated when the UARTE has reached the point where it is only able to receive four more bytes in its internal RX FIFO. Data received when the internal RX FIFO is filled up, will be lost.

The UARTE receiver will be in its lowest activity level, and consume the least amount of energy, when it is stopped, i.e. before it is started via STARTRX or after it has been stopped via STOPRX and the RXTO event has been generated. See [POWER — Power control](#) on page 64 for more information about power modes.

### 6.19.4 Error conditions

An ERROR event, in the form of a framing error, will be generated if a valid stop bit is not detected in a frame. Another ERROR event, in the form of a break condition, will be generated if the RXD line is held active low for longer than the length of a data frame. Effectively, a framing error is always generated before a break condition occurs.

An ERROR event will not stop reception. If the error was a parity error, the received byte will still be transferred into Data RAM, and so will following incoming bytes. If there was a framing error (wrong stop bit), that specific byte will NOT be stored into Data RAM, but following incoming bytes will.

### 6.19.5 Using the UARTE without flow control

If flow control is not enabled, the interface will behave as if the CTS and RTS lines are kept active all the time.

### 6.19.6 Parity and stop bit configuration

Automatic even parity generation for both transmission and reception can be configured using the register [CONFIG](#) on page 353. See the register description for details.

The amount of stop bits can also be configured through the register [CONFIG](#) on page 353.

### 6.19.7 Low power

When putting the system in low power and the peripheral is not needed, lowest possible power consumption is achieved by stopping, and then disabling the peripheral.

The STOPTX and STOPRX tasks may not be always needed (the peripheral might already be stopped), but if STOPTX and/or STOPRX is sent, software shall wait until the TXSTOPPED and/or RXTO event is received in response, before disabling the peripheral through the ENABLE register.

## 6.19.8 Pin configuration

The different signals RXD, CTS (Clear To Send, active low), RTS (Request To Send, active low), and TXD associated with the UARTE are mapped to physical pins according to the configuration specified in the PSEL.RXD, PSEL.CTS, PSEL.RTS, and PSEL.TXD registers respectively.

The PSEL.RXD, PSEL.CTS, PSEL.RTS, and PSEL.TXD registers and their configurations are only used as long as the UARTE is enabled, and retained only for the duration the device is in ON mode. PSEL.RXD, PSEL.RTS, PSEL.RTS, and PSEL.TXD must only be configured when the UARTE is disabled.

To secure correct signal levels on the pins by the UARTE when the system is in OFF mode, the pins must be configured in the GPIO peripheral as described in the following table.

Only one peripheral can be assigned to drive a particular GPIO pin at a time. Failing to do so may result in unpredictable behavior.

| UARTE signal | UARTE pin                | Direction | Output value   |
|--------------|--------------------------|-----------|----------------|
| RXD          | As specified in PSEL.RXD | Input     | Not applicable |
| CTS          | As specified in PSEL.CTS | Input     | Not applicable |
| RTS          | As specified in PSEL.RTS | Output    | 1              |
| TXD          | As specified in PSEL.TXD | Output    | 1              |

      ## 6.20.2 Temporarily pausing the watchdog

By default, the watchdog will be active counting down the down-counter while the CPU is sleeping and when it is halted by the debugger. It is however possible to configure the watchdog to automatically pause while the CPU is sleeping as well as when it is halted by the debugger.

## 6.20.3 Watchdog reset

A TIMEOUT event will automatically lead to a watchdog reset.

See [Reset](#) on page 56 for more information about reset sources. If the watchdog is configured to generate an interrupt on the TIMEOUT event, the watchdog reset will be postponed with two 32.768 kHz clock cycles after the TIMEOUT event has been generated. Once the TIMEOUT event has been generated, the impending watchdog reset will always be effectuated.

The watchdog must be configured before it is started. After it is started, the watchdog's configuration registers, which comprise registers CRV, RREN, and CONFIG, will be blocked for further configuration.

The watchdog can be reset from several reset sources, see [Reset behavior](#) on page 57.

When the device starts running again, after a reset, or waking up from OFF mode, the watchdog configuration registers will be available for configuration again.

## 6.20.4 Registers

| Base address | Peripheral | Instance | Secure mapping | DMA security | Description    | Configuration |
|--------------|------------|----------|----------------|--------------|----------------|---------------|

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |  |  |  |  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  # 7 LTE modem

## 7.1 Introduction

The long term evolution (LTE) modem consists of baseband processing and RF parts, which together implement a complete 3GPP LTE release 13 (Rel-13) Cat-M1 and Cat-NB1 and LTE release 14 (Rel-14) Cat-NB1 and Cat-NB2 capable product.

**Note:** Cat-NB2 is supported in LTE modem HW, but needs modem firmware support to get enabled. Please refer to *nRF9160 modem firmware release notes* found under nRF91 FW binaries downloads concerning availability of Cat-NB2 feature support".

As illustrated in the image below, the following is a part of the LTE modem:

- RF transceiver
- Modem baseband (BB)
- Embedded flash/RAM
- Modem host processor and peripherals

The modem baseband and host processor provide functions for the LTE L1, L2 and L3 (layer 1, 2 and 3 respectively) as well as IP communication layers. Modem peripherals provide hardware services for modem operating system and for modem secure execution environment.

Figure 108: LTE modem within the nRF91

Application and modem domains are interacting through interprocessor communication (IPC) mechanism. LTE modem is accessible to user through the modem API.

The application processor is the master in the system and responsible for starting and stopping of the modem. LTE modem enables the clocks and power required for its own operation. Shared resources, such as e.g. clocks, are handled within the platform and require no user involvement. In cases where a hard fault is detected in the modem, the application domain will perform a hard reset for the modem.

**Note:** For details regarding the modem API, please refer to *nRF Connect SDK* document and *nRF91 AT Commands, Command Reference Guide* document.

Key features of the LTE modem are:

- Complete modem with baseband and RF transceiver
- 3GPP release 13 compliant LTE categories:
  - Cat-M1 (eMTC - enhanced machine type communication)
  - Cat-NB1 (NB-IoT - narrowband internet of things (IoT))
- 3GPP release 14 compliant LTE categories:
  - Cat-NB1 (NB-IoT)
  - Cat-NB2 (NB-IoT)
- Power saving modes
- Supporting LTE bands from 700 MHz to 2.2 GHz through a single typical 50  $\Omega$  antenna pin.
  - ANT antenna pin is DC grounded
- RX sensitivity: -108 dBm for Cat-M1 and -114 dBm for Cat-NB1 and Cat-NB2
  - As defined in 3GPP conformance test specification TS 36.521-1
- 1.8 V MIPI RFFE (RF front-end) digital control interface and MAGPIO control interface for external RF applications.
- An LTE modem internal ADC that is also used for some AT command interface services e.g. for battery monitoring.
- 1.8 V UICC (universal integrated circuit card) interface, based on ISO/IEC 7816-3 and compliant with:
  - ICC (ETSI TS 102 221)
  - eUICC (ETSI TS 103 383)

**Note:** nRF9160 is able to run different modem FW builds that define the final modem feature set in a specific nRF9160 based application.

**Note:** For details regarding the services provided by modem AT command interface, please refer to *nRF Connect SDK* document and *nRF91 AT Commands, Command Reference Guide* document.

## 7.2 SIM card interface

LTE modem supports the UICC (universal integrated circuit card) interface.

Only the UICCs with the electrical interface specified in ISO/IEC 7816-3 are supported, meaning that the UICCs with IC-USB, CLF or MMC interfaces are not supported.

The supported UICC/eUICC interface is compliant with:

- ETSI TS 102 221: Smart Cards; UICC-Terminal interface; Physical and logical characteristics
- ETSI TS 103 383: Smart Cards; Embedded UICC; Requirements Specification

The physical interface towards the eUICC is the same as towards the removable UICC.

Only the class C (supply voltage 1.8 V nominal) operation is supported. Support for the legacy class B (supply voltage 3.0 V nominal) operation must be built with external components, including the external power supply and the level shifters towards the LTE modem UICC interface.

LTE modem supports powering down the UICC during PSM and eDRX idle mode, when the UICC supports this feature as specified in 3GPP TS 24.301. To reach the lowest total power consumption of the complete

cellular IoT product, only UICCs supporting power down mode during PSM and eDRX idle mode sleep intervals should be considered.

LTE modem controls the physical interfaces towards the UICC and implements the transport protocol over the four-pin ISO/IEC 7816-3 interface:

- VCC (power supply): LTE modem drives this
- CLK (clock signal): LTE modem drives this
- RST (reset signal): LTE modem drives this
- I/O (input/output serial data): Bi-directional

The interface and the connections between LTE modem, UICC connector, and the ESD device is shown in the figure below.

Figure 109: Connections between LTE modem, card connector, and the ESD device

Only standard transmission speeds are supported as specified in ETSI TS 102 221.

**Important:** LTE modem must be stopped through the modem API, before removing the UICC.

An ESD (electrostatic discharge) protection device compatible with UICC cards must be used between the removable card and the LTE modem, to protect LTE modem against a harmful electrostatic discharge from the card connector.

## 7.3 LTE modem coexistence interface

LTE modem uses a dedicated three-pin interface for RF interference avoidance towards a companion radio device e.g. an external positioning device or Bluetooth Low Energy device.

The inputs and outputs for this interface:

- COEX0: Input to the LTE modem from the external device. When active high, indicates that the external device transceiver is turned on.
  - When internal GPS is used, COEX0 can be used as active high control for the external LNA component.
- COEX1: Output from the LTE modem to the external device. Active high time mark pulse, which is synchronous to LTE system time.
  - When internal GPS is used, COEX1 delivers the GPS 1PPS (one pulse per second) time mark pulse.
- COEX2: Output from the LTE modem to the external device. When active high, indicates that the LTE modem transceiver is turned on.
  - COEX2 can also be treated as active low grant from LTE modem to the external device, indicating grant to transmit and receive.

**Note:** COEX2 pin requires an external pull-down resistor in 100 k $\Omega$  size range to be used.

**Note:** Please refer to *nRF9160 modem firmware release notes* found under nRF91 FW binaries downloads concerning availability of COEX signaling feature support".

COEX interface timing in relation to modem state is shown in the figure below.

Figure 110: COEX interface timing

## 7.4 LTE modem RF control external interface

LTE modem provides dedicated 1.8 V digital interfaces for controlling external RF applications, such as antenna tuner devices:

- MIPI RFFE interface pins: VIO, SCLK, SDATA.
- MAGPIO interface pins: MAGPIO0, MAGPIO1, MAGPIO2.

LTE modem drives these outputs timing accurately according to LTE protocol timing to set e.g. the correct antenna tuner settings per used frequency. User needs to inform the LTE modem through the modem API about the particular RF application e.g. antenna tuner device configuration, so that LTE modem knows how to drive it.

**Note:** For details regarding the modem API and supported RF external control features, please refer to *nRF91 AT Commands, Command Reference Guide* document.

**Note:** MIPI RFFE capacitive load at SCLK or SDATA pins shall not exceed 15 pF.

MIPI RFFE interface timing in relation to modem state is shown in the figure below.

Figure 111: MIPI RFFE interface timing

MAGPIO interface timing in relation to modem state is shown in the figure below.

Figure 112: MAGPIO interface timing

## 7.5 RF front-end interface

nRF9160 has a single-ended (SE) 50  $\Omega$  antenna interface to connect directly to antenna.

## 7.6 Registers

## 7.7 Electrical specification

### 7.7.1 Key RF parameters for Cat-M1

**Note:** For certification status, please refer to [Regulatory information](#) on page 398.

# 8 GPS receiver

The GPS receiver supports GPS L1 C/A reception. Operation is time multiplexed with LTE modem, and it is possible to obtain the GPS position either while the LTE is in RRC Idle mode or power saving mode (PSM), or when the LTE modem is completely deactivated.

The application processor is the master in the system and responsible for starting and stopping of the GPS receiver. GPS receiver is accessible to user through the GPS API.

**Note:** For details regarding the modem API, please refer to *nRF Connect SDK* document and *nRF91 AT Commands, Command Reference Guide* document.

Key features of the GPS receiver are:

- GPS L1 C/A supported
- Optimized for low-power and low-cost IoT applications
- Modes of operation:
  - Single shot (cold start mode by default)
  - Position fix per fixed interval, configurable between 10 s - 0.5 hour: first start with cold start, sequential fixes with hot start
  - Continuous tracking
- Power saving mode:
  - Duty-cycled continuous tracking operation
- Antenna interface:
  - External low-noise amplifier (LNA) with SAW filter recommended on the GPS antenna input
  - Dedicated GPS antenna, or shared antenna with LTE
  - GPS antenna pin is DC grounded

**Note:** There must be minimum 27dB attenuation to out of band power to avoid blocking high power RF signals to GPS receiver input. This can be achieved for example by a SAW filter at the output of the external LNA.

## 8.1 Electrical specification

Table below summarises GPS receiver performance parameters.

| Symbol                | Description                                                                | Value  | Unit |
|-----------------------|----------------------------------------------------------------------------|--------|------|
| Sensitivity, cold     | Acquisition sensitivity, cold start                                        | -145.5 | dBm  |
| Sensitivity, hot      | Acquisition sensitivity, hot start                                         | -147   | dBm  |
| Sensitivity, tracking | Tracking sensitivity                                                       | -155   | dBm  |
| TTFF, cold            | Acquisition time (time to first fix (TTFF)), cold start, open sky, typical | 36     | s    |
| TTFF, hot             | Acquisition time (TTFF), hot start, open sky, typical                      | 1.3    | s    |
| Accuracy, periodic    | Positioning accuracy (CEP50), periodic tracking                            | 5      | m    |
| Accuracy, continuous  | Positioning accuracy (CEP50), continuous tracking                          | 3      | m    |

Table 103: GPS electrical specification

# 9 Debug and trace

## 9.1 Overview

The debug and trace system offers a flexible and powerful mechanism for non-intrusive debugging.

Figure 113: Debug and trace overview

The main features of the debug and trace system include:

- Two-pin serial wire debug (SWD) interface, protocol version 1
- Access port connection
  - Breakpoint unit (BPU) supports eight hardware breakpoint comparators
  - Data watchpoint and trace (DWT) unit supports four watchpoint comparators
  - Instrumentation trace macrocell (ITM)
  - Embedded trace macrocell (ETM)
  - Access protection through APPROTECT, ERASEPROTECT and SECUREAPPROTECT
- Trace port interface unit (TPIU)
  - 4-bit parallel trace of ITM and ETM trace data

**Note:** When a system contains multiple CPU domains, it is important to notice that if one domain (subsystem A) has master rights on another domain (subsystem B), the master subsystem can have access to data from the slave subsystem. In this example, even if subsystem B is locked by APPROTECT or ERASEPROTECT, subsystem A can access some data for subsystem B. Consequently, even if the security permissions are managed per subsystem, it is mandatory to have a global approach to the protection. Protecting a slave subsystem does not guarantee system security if the master subsystem is not protected.

### 9.1.1 Special consideration regarding debugger access

A debugger, if desired, can be restricted to debug non-secure code only, and access non-secure memory regions and peripherals using register [SECUREAPPROTECT](#) on page 42. Register [APPROTECT](#) on page 41 will block all debugger access.

Debugger accesses are controlled as described in table below.

| Debugging capability       | UICR.APPROTECT.PALL | UICR.SECUREAPPROTECT.PALL |
|----------------------------|---------------------|---------------------------|
| Secure and non-secure code | Unprotected         | Unprotected               |
| Non-secure code only       | Unprotected         | Protected                 |
| No debugging possible      | Protected           | -                         |

Table 104: Debugger access control

If a RAM or flash region has its permission set to allow code execution, the content of this region will be visible to the debugger even if the read permission is not set. This allows a debugger to display the content of the code being executed. For more about how to configure permissions, please refer to [SPU — System protection unit](#) on page 259.

### 9.1.2 DAP - Debug access port

An external debugger can access the device via the debug access port (DAP).

The DAP implements a standard ARM CoreSight serial wire debug port (SW-DP). The SW-DP implements the serial wire debug (SWD) protocol that is a two-pin serial interface, see SWDCLK and SWDIO illustrated in figure [Debug and trace overview](#) on page 369.

In addition to the default access port in the application CPU (AHB-AP), the DAP includes a custom control access port (CTRL-AP), described in more detail in [CTRL-AP - Control access port](#) on page 372.

**Note:**

- The SWDIO line has an internal pull-up resistor.
- The SWDCLK line has an internal pull-down resistor.

There are several access ports that connect to different parts of the system. An overview is given in the table below.

| AP ID | Type    | Description                               |
|-------|---------|-------------------------------------------|
| 0     | AHB-AP  | Application subsystem access port         |
| 3     | APB-AP  | CoreSight subsystem access port           |
| 4     | CTRL-AP | Application subsystem control access port |

Table 105: Access port overview

The standard ARM components are documented in *ARM CoreSight SoC-400 Technical Reference Manual, revision r3p2*. The control access port (CTRL-AP) is proprietary, and described in more detail in [CTRL-AP - Control access port](#) on page 372.

### 9.1.3 Debug interface mode

Before the external debugger can access the CPU's access port (AHB-AP) or the control access port (CTRL-AP), the debugger must first request the device to power up via CxxxPWRUPREQ in the SWJ-DP.

As long as the debugger is requesting power via CxxxPWRUPREQ, the device will be in debug interface mode. Otherwise, the device is in normal mode. When a debug session is over, the external debugger must make sure to put the device back into normal mode and then a pin reset should be performed. The reason is that the overall power consumption is higher in debug interface mode compared to normal mode.

Some peripherals behave differently in debug interface mode compared to normal mode. The differences are described in more detail in the chapters of the affected peripherals.

For details on how to use the debug capabilities, please read the debug documentation of your IDE.

If the device is in System OFF when power is requested via CxxxPWRUPREQ, the system will wake up and the DIF flag in [RESETREAS](#) on page 68 will be set.

### 9.1.4 Real-time debug

The device supports real-time debugging, which allows interrupts to execute to completion in real time when breakpoints are set in thread mode or lower priority interrupts.

Real-time debugging thus enables the developer to set a breakpoint and single-step through their code without a failure of the real-time event-driven threads running at higher priority. For example, this enables the device to continue to service the high-priority interrupts of an external controller or sensor without failure or loss of state synchronization while the developer steps through code in a low-priority thread.

### 9.1.5 Trace

The device supports ETM and ITM trace.

Trace data from the ETM and the ITM is sent to an external debugger via a 4-bit wide parallel trace port (TPIU), see TRACEDATA[0] through TRACEDATA[3], and TRACECLK in [Debug and trace overview](#) on page 369.

For details on how to use the trace capabilities, please read the debug documentation of your IDE.

TPIU's trace pins are multiplexed with GPIOs, see [Pin assignments](#) on page 385 for more information.

**Note:** To configure the trace data delivery to the device trace port, use the MDK system start-up file included as of MDK version 8.26.0.

Trace speed is configured in the [TRACEPORTSPEED \(Retained\)](#) on page 383 register. The speed of the trace pins depends on the DRIVE setting of the GPIOs that the trace pins are multiplexed with. See [GPIO — General purpose input/output](#) on page 97 for information about how to set drive settings. Only S0S1 and H0H1 drives are suitable for debugging. S0S1 is the default DRIVE at reset. If parallel or serial trace port signals are not fast enough in the debugging conditions, all GPIOs in use for tracing should be set to high drive (H0H1). The user shall make sure that DRIVE setting for these GPIOs is not overwritten by software during the debugging session.

### 9.1.6 Registers

| Register                 | Offset | Security | Description                                                                                                                                                                                                                                          |
|--------------------------|--------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <a href="#">TARGETID</a> | 0x042  |          | <p>The TARGETID register provides information about the target when the host is connected to a single device.</p> <p>The TARGETID register is accessed by a read of DP register 0x4 when the DPBANKSEL bit in the SELECT register is set to 0x2.</p> |

Table 106: Register overview

#### 9.1.6.1 TARGETID

Address offset: 0x042

The TARGETID register provides information about the target when the host is connected to a single device.

The TARGETID register is accessed by a read of DP register 0x4 when the DPBANKSEL bit in the SELECT register is set to 0x2.

| Bit number       |     |           |            | 31 30 29 28 27 26 25 24 23 22 21 20 19 18 17 16 15 14 13 12 11 10 9 8 7 6 5 4 3 2 1 0 |                                                                                                                                           |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |                             |  |  |  |  |  |  |  |  |  |  |  |

## 9.2 CTRL-AP - Control access port

The control access port (CTRL-AP) is a custom access port that enables control of the device when other debug access ports (DAP) have been disabled by the access port protection.

For an overview of the other debug access ports, see [DAP - Debug access port](#) on page 370.

Figure 114: Control access port details

Access port protection (APPROTECT) blocks the debugger access to the AHB-AP, and prevents read and write access to all CPU registers and memory-mapped addresses. To enable port protection access for both secure and non-secure modes, use the registers [SECUREAPPROTECT](#) on page 42 and [APPROTECT](#) on

page 41 respectively. The debugger can use the register [APPROTECT.STATUS](#) on page 376 to read the status of secure and non-secure access port protection.

CTRL-AP has the following features:

- Soft reset
- Erase all
- Mailbox interface
- Debug of protected devices

### 9.2.1 Reset request

The debugger can request the device to perform a soft reset.

Use the register [RESET](#) on page 375 to request a soft reset. Once the soft reset is performed, the reset reason is accessible on the on-chip firmware through the [RESETRAS](#) register. For more information about the soft reset, see [Reset](#) on page 56.

### 9.2.2 Erase all

The Erase all function lets the debugger trigger an erase of flash, user information configuration registers (UICR), RAM, all peripheral settings, and also removes the access port protection.

To trigger an erase all function, the debugger writes to the register [ERASEALL](#) on page 375. The register [ERASEALLSTATUS](#) on page 375 will read as busy for the duration of the operation. After the next reset, the access port protection is removed.

If the debugger performs an erase all function on a slave MCU, the erase sequence will always erase the application MCU first, independently of how the application is protected, before erasing the slave MCU.

### Erase all protection

It is possible to prevent the debugger from performing an erase all operation by writing to the [UICR.ERASEPROTECT](#) register. Once the register is configured and the device is reset, the CTRL-AP [ERASEALL](#) operation is disabled, and all flash write and erase operations are restricted to the firmware. In addition, it is still possible to write/erase from the debugger as long as the [UICR.APPROTECT](#) register is not set.

**Note:** Setting the [UICR.ERASEPROTECT](#) register only affects the erase all operation and not the debugger access.

The register [ERASEPROTECT.STATUS](#) on page 376 holds the status for erase protection.

### 9.2.3 Mailbox interface

CTRL-AP implements a mailbox interface which enables the CPU to communicate with a debugger over the SWD interface.

The mailbox interface consists of a transmit register [MAILBOX.TXDATA](#) on page 377 with its corresponding status register [MAILBOX.TXSTATUS](#) on page 377, and a receive register [MAILBOX.RXDATA](#) on page 377 with its corresponding status register [MAILBOX.RXSTATUS](#) on page 377. Status bits in the TXSTATUS/RXSTATUS registers are set and cleared automatically when the TXDATA/RXDATA registers are written to and read from, independently of the direction.

Figure 115: Mailbox register interface

### Mailbox transfer sequence

1. Sender writes TXDATA.
2. Hardware sets sender's TXSTATUS to DataPending.
3. Hardware sets receiver's RXSTATUS to DataPending.
4. Receiver reads RXDATA.
5. Hardware sets receiver's RXSTATUS to NoDataPending.
6. Hardware sets sender's TXSTATUS to NoDataPending.

### 9.2.4 Disabling erase protection

The erase protection mechanism can be disabled to return a device to factory default settings on next reset.

The debugger can read the erase protection status in the register [ERASEPROTECT.STATUS](#) on page 376.

If ERASEPROTECT has been enabled, both the debugger and on-chip firmware must write the same non-zero 32-bit KEY value into their respective ERASEPROTECT.DISABLE registers to disable the erase protection. When both registers have been written with the same non-zero 32-bit KEY value, the device is automatically erased as described in [Erase all](#) on page 373. The access ports will be re-enabled on the next reset once the secure erase sequence has completed.

The write-once register [ERASEPROTECT.LOCK](#) on page 379 should be set to *Locked* as early as possible in the start-up sequence, preferably as soon as the on-chip firmware has determined it does not need to communicate with a debugger over the CTRL-AP mailbox interface. Once written, it will not be possible to remove the erase protection until the next reset.

### 9.2.5 Debugger registers

CTRL-AP has a set of registers that can only be accessed from the debugger over the SWD interface. These are not accessible from the CPU.

#### 9.2.5.1 Registers

| Register                         | Offset | Description                                                                                                                                                           |
|----------------------------------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <a href="#">RESET</a>            | 0x000  | System reset request                                                                                                                                                  |
| <a href="#">ERASEALL</a>         | 0x004  | Perform a secure erase of the device, where flash, SRAM and UICR will be erased in sequence. The device will be returned to factory default settings upon next reset. |
| <a href="#">ERASEALLSTATUS</a>   | 0x008  | This is the status register for the ERASEALL operation.                                                                                                               |
| <a href="#">APPROTECT.STATUS</a> | 0x00C  | This is the status register for the UICR access port protection.                                                                                                      |

| Register             | Offset | Description                                                                                          |
|----------------------|--------|------------------------------------------------------------------------------------------------------|
| ERASEPROTECT.STATUS  | 0x018  | This is the status register for the UICR ERASEPROTECT configuration.                                 |
| ERASEPROTECT.DISABLE | 0x01C  | This register disables ERASEPROTECT and performs ERASEALL.                                           |
| MAILBOX.TXDATA       | 0x020  | Data sent from the debugger to the CPU.                                                              |
| MAILBOX.TXSTATUS     | 0x024  | This register shows a status that indicates if data sent from the debugger to the CPU has been read. |
| MAILBOX.RXDATA       | 0x028  | Data sent from the CPU to the debugger.                                                              |
| MAILBOX.RXSTATUS     | 0x02C  | This register shows a status that indicates if data sent from the CPU to the debugger has been read. |
| IDR                  | 0x0FC  | CTRL-AP Identification Register, IDR                                                                 |

Table 107: Register overview

### 9.2.5.1.1 RESET

Address offset: 0x000

System reset request

This register is automatically deactivated by writing Erase to ERASEALL, it is then kept inactive until a reset source affecting the debug system is asserted. See [Reset behavior](#) on page 57.

### 9.2.5.1.2 ERASEALL

Address offset: 0x004

Perform a secure erase of the device, where flash, SRAM and UICR will be erased in sequence. The device will be returned to factory default settings upon next reset.

#### 9.2.5.1.6 ERASEPROTECT.DISABLE

Address offset: 0x01C

This register disables ERASEPROTECT and performs ERASEALL.

|                  |     |       |          |                                                                                       |  |  |  |                                                                                                                                              |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

#### 9.2.5.1.7 MAILBOX.TXDATA

Address offset: 0x020

Data sent from the debugger to the CPU.

Writing to this register will automatically set a DataPending value in the TXSTATUS register.

#### 9.2.5.1.8 MAILBOX.TXSTATUS

Address offset: 0x024

This register shows a status that indicates if data sent from the debugger to the CPU has been read.

#### 9.2.5.1.9 MAILBOX.RXDATA

Address offset: 0x028

Data sent from the CPU to the debugger.

Reading from this register will automatically set a NoDataPending value in the RXSTATUS register.

|                  |     |       |          |                                                                                       |  |  |  |  |  |  |  |                    |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

#### 9.2.5.1.10 MAILBOX.RXSTATUS

Address offset: 0x02C

This register shows a status that indicates if data sent from the CPU to the debugger has been read.

| Register             | Offset | Security | Description                                                                                              |
|----------------------|--------|----------|----------------------------------------------------------------------------------------------------------|
| MAILBOX.RXDATA       | 0x400  |          | Data sent from the debugger to the CPU.                                                                  |
| MAILBOX.RXSTATUS     | 0x404  |          | This register shows a status that indicates if data sent from the debugger to the CPU has been read.     |
| MAILBOX.TXDATA       | 0x480  |          | Data sent from the CPU to the debugger.                                                                  |
| MAILBOX.TXSTATUS     | 0x484  |          | This register shows a status that indicates if the data sent from the CPU to the debugger has been read. |
| ERASEPROTECT.LOCK    | 0x500  |          | This register locks the ERASEPROTECT.DISABLE register from being written until next reset.               |
| ERASEPROTECT.DISABLE | 0x504  |          | This register disables the ERASEPROTECT register and performs an ERASEALL operation.                     |

Table 109: Register overview

### 9.2.6.1 MAILBOX.RXDATA

Address offset: 0x400

Data sent from the debugger to the CPU.

Reading from this register will automatically set a NoDataPending value in the RXSTATUS register.

|                  |     |        |          |       |    |    |    |                             |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |   |   |   |   |   |   |   |   |   |   |

### 9.2.6.2 MAILBOX.RXSTATUS

Address offset: 0x404

This register shows a status that indicates if data sent from the debugger to the CPU has been read.

|                  |     |          |               |       |                                    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |   |   |   |   |   |   |   |   |   |   |   |

### 9.2.6.3 MAILBOX.TXDATA

Address offset: 0x480

Data sent from the CPU to the debugger.

Writing to this register will automatically set a DataPending value in the TXSTATUS register.

|                  |     |        |          |  |  |  |  |  |  |       |    |    |    |    |    |    |                       |    |    |    |    |    |    |    |    |    |    |    |    |    |    |   |   |   |   |   |   |   |   |   |   |   |   |

### 9.2.6.6 ERASEPROTECT.DISABLE

Address offset: 0x504

This register disables the ERASEPROTECT register and performs an ERASEALL operation.

|                  |     |       |          |                                                                                       |  |  |  |                                                                                                                                             |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

## 9.3 TAD - Trace and debug control

Configuration interface for trace and debug

Please refer to the [Trace](#) section for more information about how to configure the trace and debug interface.

**Note:** Although there are [PSEL](#) registers for the trace port, each function can only be mapped to a single pin due to pin speed requirements. Setting the PIN field to anything else will not have any effect. See [Pin assignment chapter](#) for more information

### 9.3.1 Registers

| Base address | Peripheral | Instance | Secure mapping | DMA security | Description             | Configuration |
|--------------|------------|----------|----------------|--------------|-------------------------|---------------|
| 0xE0080000   | TAD        | TAD      | S              | NA           | Trace and debug control |               |

Table 110: Instances

| Register         | Offset | Security | Description                                         |
|------------------|--------|----------|-----------------------------------------------------|
| TASKS_CLOCKSTART | 0x000  |          | Start all trace and debug clocks.                   |
| TASKS_CLOCKSTOP  | 0x004  |          | Stop all trace and debug clocks.                    |
| ENABLE           | 0x500  |          | Enable debug domain and aquire selected GPIOs       |
| PSEL.TRACECLK    | 0x504  |          | Pin configuration for TRACECLK                      |
| PSEL.TRACEDATA0  | 0x508  |          | Pin configuration for TRACEDATA[0]                  |
| PSEL.TRACEDATA1  | 0x50C  |          | Pin configuration for TRACEDATA[1]                  |
| PSEL.TRACEDATA2  | 0x510  |          | Pin configuration for TRACEDATA[2]                  |
| PSEL.TRACEDATA3  | 0x514  |          | Pin configuration for TRACEDATA[3]                  |
| TRACEPORTSPEED   | 0x518  |          | Clocking options for the Trace Port debug interface |
|                  |        |          | Reset behavior is the same as debug components      |
|                  |        |          | This register is retained.                          |

Table 111: Register overview

### 9.3.1.1 TASKS\_CLOCKSTART

Address offset: 0x000

Start all trace and debug clocks.

|                  |     |                  |          |                                                                                       |  |  |  |                                   |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | # 10 Hardware and layout

## 10.1 Pin assignments

This section describes the pin assignment and the pin functions.

This device provides flexibility when it comes to routing and configuration of the GPIO pins. However, some pins have recommendations for how the pin should be configured or what it should be used for. See [LGA pin assignments](#) on page 385 for more information about this.

### 10.1.1 LGA pin assignments

The pin assignment table and figure describe the assignments.

Figure 116: LGA pin assignments, top view

| Pin no | Pin name   | Function          | Description                                       |
|--------|------------|-------------------|---------------------------------------------------|
| 1      | GND_Shield | Power             | Ground                                            |
| 2      | P0.05      | Digital I/O (SoC) | General purpose I/O                               |
| 3      | P0.06      | Digital I/O (SoC) | General purpose I/O                               |
| 4      | P0.07      | Digital I/O (SoC) | General purpose I/O                               |
| 5      | GND_Shield | Power             | Ground                                            |
| 6      | GND_Shield | Power             | Ground                                            |
| 7      | GND_Shield | Power             | Ground                                            |
| 8      | GND_Shield | Power             | Ground                                            |
| 9      | GND_Shield | Power             | Ground                                            |
| 10     | Reserved   |                   | Do not connect/reserved for future use            |
| 11     | GND_Shield | Power             | Ground                                            |
| 12     | VDD_GPIO   | Power             | GPIO power supply input and logic level           |
| 13     | DECO       | Power             | Power supply decoupling. Reserved for Nordic use. |
| 14     | GND_Shield | Power             | Ground                                            |
| 15     | P0.08      | Digital I/O (SoC) | General purpose I/O                               |
| 16     | P0.09      | Digital I/O (SoC) | General purpose I/O                               |

| Pin no | Pin name   | Function          | Description                                             |
|--------|------------|-------------------|---------------------------------------------------------|
| 17     | GND_Shield | Power             | Ground                                                  |
| 18     | P0.10      | Digital I/O (SoC) | General purpose I/O                                     |
| 19     | P0.11      | Digital I/O (SoC) | General purpose I/O                                     |
| 20     | P0.12      | Digital I/O (SoC) | General purpose I/O                                     |
| 21     | GND_Shield | Power             | Ground                                                  |
| 22     | VDD2       | Power             | Supply voltage input                                    |
| 23     | P0.13      | Digital I/O (SoC) | General purpose I/O.                                    |
|        | AIN0       | Analog input      | Analog input.                                           |
| 24     | P0.14      | Digital I/O (SoC) | General purpose I/O.                                    |
|        | AIN1       | Analog input      | Analog input.                                           |
| 25     | P0.15      | Digital I/O (SoC) | General purpose I/O.                                    |
|        | AIN2       | Analog input      | Analog input.                                           |
| 26     | P0.16      | Digital I/O (SoC) | General purpose I/O.                                    |
|        | AIN3       | Analog input      | Analog input.                                           |
| 27     | GND_Shield | Power             | Ground                                                  |
| 28     | P0.17      | Digital I/O (SoC) | General purpose I/O.                                    |
|        | AIN4       | Analog input      | Analog input.                                           |
| 29     | P0.18      | Digital I/O (SoC) | General purpose I/O.                                    |
|        | AIN5       | Analog input      | Analog input.                                           |
| 30     | P0.19      | Digital I/O (SoC) | General purpose I/O.                                    |
|        | AIN6       | Analog input      | Analog input.                                           |
| 31     | GND_Shield | Power             | Ground                                                  |
| 32     | nRESET     | Digital I/O (SoC) | SoC system reset                                        |
|        |            |                   | <b>Note:</b> External pull-up not allowed.              |
| 33     | SWDCLK     | Digital input     | Serial wire debug clock input for debug and programming |
| 34     | SWDIO      | Digital I/O       | Serial wire debug I/O for debug and programming         |
| 35     | P0.20      | Digital I/O (SoC) | General purpose I/O.                                    |
|        | AIN7       | Analog input      | Analog input.                                           |
| 36     | GND_Shield | Power             | Ground                                                  |
| 37     | P0.21      | Digital I/O (SoC) | General purpose I/O.                                    |
|        | TRACECLK   | Trace clock       | Trace buffer clock (optional).                          |
| 38     | P0.22      | Digital I/O (SoC) | General purpose I/O.                                    |
|        | TRACEDATA0 | Trace data        | Trace buffer TRACEDATA[0] (optional).                   |
| 39     | P0.23      | Digital I/O (SoC) | General purpose I/O.                                    |
|        | TRACEDATA1 | Trace data        | Trace buffer TRACEDATA[1] (optional).                   |
| 40     | P0.24      | Digital I/O (SoC) | General purpose I/O.                                    |
|        | TRACEDATA2 | Trace data        | Trace buffer TRACEDATA[2] (optional).                   |
| 41     | GND_Shield | Power             | Ground                                                  |
| 42     | P0.25      | Digital I/O (SoC) | General purpose I/O.                                    |
|        | TRACEDATA3 | Trace data        | Trace buffer TRACEDATA[3] (optional).                   |
| 43     | SIM_RST    | Digital I/O (SoC) | SIM reset                                               |
| 44     | GND_Shield | Power             | Ground                                                  |
| 45     | SIM_DET    | Digital I/O (SoC) | SIM detect                                              |
|        |            |                   | Not used. Needs to be left floating.                    |
| 46     | SIM_CLK    | Digital I/O (SoC) | SIM clock                                               |
| 47     | GND_Shield | Power             | Ground                                                  |
| 48     | SIM_IO     | Digital I/O (SoC) | SIM data                                                |
| 49     | SIM_1V8    | Power             | SIM 1.8 V power supply output                           |

| Pin no | Pin name   | Function          | Description                                |
|--------|------------|-------------------|--------------------------------------------|
| 50     | GND_Shield | Power             | Ground                                     |
| 51     | Reserved   |                   | Do not connect/reserved for future use     |
| 52     | GND_Shield | Power             | Ground                                     |
| 53     | MAGPIO2    | Digital I/O (SoC) | 1.8 V general purpose I/O                  |
| 54     | MAGPIO1    | Digital I/O (SoC) | 1.8 V general purpose I/O                  |
| 55     | MAGPIO0    | Digital I/O (SoC) | 1.8 V general purpose I/O                  |
| 56     | GND_Shield | Power             | Ground                                     |

Table 113: LGA dimensions in millimeters

## 10.3 Reference circuitry

To ensure good RF performance when designing PCBs, it is highly recommended using the PCB layouts and component values provided by Nordic Semiconductor.

Documentation for the different package reference circuits, including Altium Designer files, PCB layout files, and PCB production files can be downloaded from the product page at [www.nordicsemi.com](http://www.nordicsemi.com).

In this section, there are reference circuits for SixA to show the components and component values to support on-chip features in a design.

**Note:** This is not a complete list of configurations, but all required circuitry is shown for further configurations.

10.3.1 Schematic SixA LGA127

Circuit configuration for SixA LGA127, showing the schematic and the Bill of Materials (BOM) table.

Figure 118: Schematic SixA with antenna details

| Designator      | Value                 | Description                                                                  | Footprint |
|-----------------|-----------------------|------------------------------------------------------------------------------|-----------|
| C1, C7          | 15 pF                 | Capacitor, NP0, $\pm 0.1$ pF, 25 V                                           | 0201      |
| C2, C4, C8, C10 | 100 nF                | Capacitor, X5R, $\pm 10\%$                                                   | 0201      |
| C3, C9          | 47 $\mu$ F            | Capacitor, X5R, $\pm 20\%$ , 10 V                                            | 0805      |
| C5              | 4.7 $\mu$ F           | Capacitor, X5R, $\pm 20\%$                                                   | 0402      |
| C6              | 4.7 $\mu$ F           | Capacitor, X5R, $\pm 10\%$ , 16 V                                            | 0805      |
| R1              | 10 k $\Omega$         | Resistor, $\pm 1\%$ , 0.05 W                                                 | 0201      |
| R2              | 1 k                   | Resistor, $\pm 1\%$ , 0.05 W                                                 | 0201      |
| FB1             | 120 $\Omega$ / 0.70 A | Ferrite Bead, 120 $\Omega$ @ 100 MHz, 700 mA, 130 m $\Omega$ Max             | 0402      |
| U1              | nRF9160-SixA          | Low power System-in-Package (SiP) with integrated LTE-M/NB-IoT modem and GPS | LGA       |

Table 114: BOM for SixA LGA127

For PCB reference layouts, see the product page for the nRF9160 at [www.nordicsemi.com](http://www.nordicsemi.com).

## 10.4 Reflow conditions

The recommended reflow profile is JEDEC J-STD-020D. The maximum amount of reflows is three.

# 11 Operating conditions

The operating conditions are the physical parameters that the chip can operate within.

| Symbol              | Parameter                       | Notes                                                                                | Min. | Nom. | Max.     | Units |
|---------------------|---------------------------------|--------------------------------------------------------------------------------------|------|------|----------|-------|
| VDD                 | Battery input voltage           | Including voltage drop, ripple and spikes.<br><br>RF 3GPP compliancy requires 3.3 V. | 3.0  | 3.8  | 5.5      | V     |
| VDD_GPIO            | GPIO input voltage              |                                                                                      | 1.7  |      | 3.6      | V     |
| GPIO <sub>H</sub>   | GPIO high level voltage         |                                                                                      |      |      | VDD_GPIO | V     |
| MAGPIO <sub>H</sub> | MAGPIO high level voltage       | Supply from internal LDO                                                             | 1.7  | 1.8  | 1.9      | V     |

| TA                  | Operating temperature           |                                                                                      | -40  | 25   | 85       | °C    |
| COEX                | COEX high level voltage         |                                                                                      |      |      | VDD_GPIO | V     |
| SIMIF               | SIMIF output high level voltage | Supply from internal LDO                                                             | 1.7  | 1.8  | 1.9      | V     |

Table 115: Operating conditions

**Note:** There can be excessive leakage at VDD and/or VDD\_GPIO if any of these supply voltages is outside its range given in the table above.

**Note:** It is not recommended to use high voltage, high drive GPIO outputs ( $V_{OH,HDH}$  and  $V_{OH,HDL}$ ) with high frequency, high capacitance loads unless needed, as this may increase noise level and affect radio receiver performance. High drive/high load should especially be avoided on GPIO pins close to the radio front end.

## 11.1 VDD\_GPIO considerations

VDD\_GPIO is the supply to the general purpose I/O.

The following restrictions should be taken into considerations:

- VDD\_GPIO should be applied after VDD has been supplied
- VDD\_GPIO should be removed before removing VDD
- If VDD is supplied and VDD\_GPIO is grounded, an extra current consumption can be generated on VDD
- If ENABLE is low, VDD\_GPIO should also be low

# 12 Absolute maximum ratings

Maximum ratings are the extreme limits to which the chip can be exposed for a limited amount of time without permanently damaging it. Exposure to absolute maximum ratings for prolonged periods of time may affect the reliability of the device.

|                                      | Note                                                    | Min.             | Max.              | Unit               |

| No internal voltage boost converters |                                                         |                  |                   |                    |

Table 116: Absolute maximum ratings

<sup>21</sup> ATEX compliance requires a maximum of 5.0 V.

# 13 Ordering information

This chapter contains information on IC marking, ordering codes, and container sizes.

## 13.1 IC marking

The nRF9160 IC package is marked like described below.

|     |    |     |    |     |     |
|-----|----|-----|----|-----|-----|
| N   | 9  | 1   | 6  | 0   |     |
| <P> | P> | <V> | V> | <H> | <P> |
| <Y> | Y> | <W> | W> | <L> | L>  |

Figure 119: Package marking

## 13.2 Box labels

Here are the box labels used for the nRF9160.

## 13.5 Product options

Defined here are the nRF9160 product options.

| Order code          | Minimum ordering quantity (MOQ) | Comment                  |
|---------------------|---------------------------------|--------------------------|
| nRF9160-SICA-B1A-R  | 2500                            | LTE-M/NB-IoT/GPS product |
| nRF9160-SICA-B1A-R7 | 100                             | LTE-M/NB-IoT/GPS product |
| nRF9160-SIAA-B1A-R  | 2500                            | LTE-M only product       |
| nRF9160-SIAA-B1A-R7 | 100                             | LTE-M only product       |
| nRF9160-SIBA-B1A-R  | 2500                            | NB-IoT only product      |
| nRF9160-SIBA-B1A-R7 | 100                             | NB-IoT only product      |

Table 127: nRF9160 order codes

| Order code | Description             |

# 14 Regulatory information

The nRF9160 undergoes a number of regulatory certifications, ensuring both regional compliances and compatibility with the LTE 3GPP specification.

For information about certified bands, and status for the ongoing certifications, see [nRF9160 Certifications](#).

# 15 Legal notices

By using this documentation you agree to our terms and conditions of use. Nordic Semiconductor may change these terms and conditions at any time without notice.

## Liability disclaimer

Nordic Semiconductor ASA reserves the right to make changes without further notice to the product to improve reliability, function, or design. Nordic Semiconductor ASA does not assume any liability arising out of the application or use of any product or circuits described herein.

Nordic Semiconductor ASA does not give any representations or warranties, expressed or implied, as to the accuracy or completeness of such information and shall have no liability for the consequences of use of such information. If there are any discrepancies, ambiguities or conflicts in Nordic Semiconductor's documentation, the Product Specification prevails.

Nordic Semiconductor ASA reserves the right to make corrections, enhancements, and other changes to this document without notice.

## Life support applications

Nordic Semiconductor ASA's products are not designed for use in life-critical medical equipment, support appliances, devices, or systems where malfunction of Nordic Semiconductor ASA's products can reasonably be expected to result in personal injury. Customer may not use any Nordic Semiconductor ASA's products in life-critical medical equipment unless adequate design and operating safeguards by customer's authorized officers have been made. Customer represents that, with respect to its applications, it has all the necessary expertise to create and implement safeguards that anticipate dangerous consequences of failures, monitor failures and their consequences, and lessen the likelihood of failures that might cause harm, and to take appropriate remedial actions. Customer agrees that prior to using or distributing any life-critical medical equipment that include Nordic Semiconductor ASA's products, customer will thoroughly test such systems and the functionality of such products as used in such systems.

Nordic Semiconductor ASA assumes no liability for applications assistance or the design of customers' products. Customers are solely responsible for the design, validation, and testing of its applications as well as for compliance with all legal, regulatory, and safety-related requirements concerning its applications.

Customer will fully indemnify Nordic Semiconductor ASA and its representatives against any damages, costs, losses, and/or liabilities arising out of customer's non-compliance with this section.

## RoHS and REACH statement

Refer to [www.nordicsemi.com](http://www.nordicsemi.com) for complete hazardous substance reports, material composition reports, and latest version of Nordic's RoHS and REACH statements.
