PHY6252 is a system-on-chip (SoC) for Bluetooth 5.2 applications, designed for various applications such as the Internet of Things (IoT), mobile devices, wearable electronic devices, and smart homes. It has a high-performance, low-power 32-bit processor, with 64KB SRAM, 256KB flash memory, 96KB ROM, 256bit efuse. The chip supports a variety of low power consumption working states, which can meet the power consumption requirements of various application scenarios. Features such as adjustable radio frequency output power can achieve the best balance between communication distance, communication speed, and power consumption.

It has the following characteristics:

- Integrated radio frequency transceiver, PA, radio frequency filter, antenna switch and power management.
- Excellent communication performance and stability in various wireless environments.
- Bluetooth rate support: 125Kbps, 500Kbps, 1Mbps, 2Mbps.
- Support broadcast expansion, multi-broadcast, channel selection.
