# Chip resistor networks

## MNR04 (1005 × 4 size)

### ●Features

- 1) Extremely small and light  
Area ratio is 60% smaller than that of chip 3216 (MNR14), while weight ratio has been cut 75%.
- 2) High-density mounting  
Can be mounted even more densely than four 1005 chips (MCR01), and mounting costs are lower.
- 3) Can be mounted on a wide variety of devices  
Squared corners make it excellent for mounting on image recognition devices.
- 4) Convex electrodes  
Easy to check the fillet after soldering is finished.
- 5) ROHM resistors comply with the international standard ISO-9001.  
Furthermore, changes to the design and specifications of products may occur without notice. Therefore, before ordering or using this product, please make sure to reconfirm the specification sheet before ordering or using this product.

•Before using components in circuits where they will be exposed to transients such as pulse loads (short-duration, high-level loads), be certain to evaluate the component in the mounted state. In addition, the reliability and performance of this component cannot be guaranteed if it is used with a steady state voltage that is greater than its rated voltage.
