

**THE DATASHEET OF
XLH736004.000000I**

Description

The Renesas XL devices (XO and VCXO options) are ultra-precision crystal oscillators with 750 to 890fs typical phase jitter over 12kHz to 20MHz bandwidth. Available in a wide frequency range from 0.750MHz to 1350MHz, the XL series crystal oscillators utilize a family of proprietary ASICs, with a key focus on noise reduction technologies.

The 3rd order Delta Sigma Modulator reduces noise to the levels that are comparable to traditional Bulk Quartz and SAW oscillators. With short lead-time, low cost, low noise, wide frequency range, excellent ambient performance, the XL devices are an excellent choice over the conventional technologies. The XL (XO option) devices have stabilities as tight as ± 20 ppm and the XL (VCXO option) devices have ± 50 ppm APR. Either option provides extremely quick delivery for both standard and custom frequencies.

Pin Assignments

(XO Option)

NOTE: To minimize power supply line noise, a 0.01 μ F bypass capacitor should be placed between V_{DD} (Pin 6) and GND (Pin 3).

(VCXO Option)

NOTE: To minimize power supply line noise, a 0.01 μ F bypass capacitor should be placed between V_{DD} (Pin 6) and GND (Pin 3).

Absolute Maximum Ratings

Stresses above the ratings listed below can cause permanent damage to the device. These ratings, which are standard values for Renesas commercially rated parts, are stress ratings only. Functional operation of the device at these or any other conditions above those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods can affect product reliability. Electrical parameters are guaranteed only over the recommended operating temperature range.
