■ Typical Characteristics

● Temperature Characteristics

Char. SL/GP
(Temp.Coeff.: +350 to -1000 ppm/°C)

Char. B/Y5P
(Temp.Range: -25 to 85 °C)
(max.Cap.Change: ±10 %)

● Characteristics of Voltage-Frequency

Rated Voltage 3 kVDC

Rated Voltage 4 kVDC

Rated Voltage 5 kVDC

The graphs above show the maximum permissible voltage when using a capacitor with an AC sine wave voltage.

When measuring this voltage in room temperature (25 °C), the capacitor self-heat generation will rise a maximum of 20 °C.

When using a pulse voltage or an AC voltage other than a sine wave, confirm that the capacitor self-heat generation is less than 20 °C in an ambient room temperature of 25 °C.

The self-heat generation temperature is the difference between the surface temperature and the ambient room temperature.

As for the situation when the self-heat generation temperature is more than 25 °C, refer to the figure on the right.

● Primary circuit and Snubber circuit of Switching Power Supply
