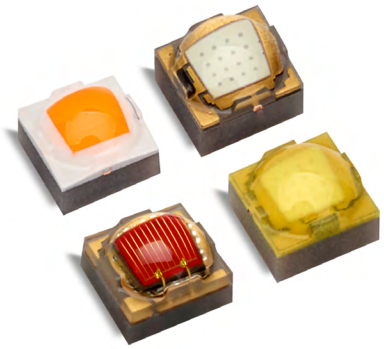
LUXEON C Color Line

Multiple colors, a single focal length

The LUXEON C Color Line is an optically advanced portfolio of Color and White LEDs. Designed for flawless color mixing, LUXEON C Color Line has one focal length for all colors, which provides consistent radiation patterns from secondary optics and maximizes optical efficiency. With low dome design, it keeps effective source size small while still improving light extraction. Designed for smooth color mixing and maximum punch, LUXEON C Color Line is the optimal LED solution for architecture, entertainment and emergency vehicle lighting applications.



FEATURES AND BENEFITS

- One focal length allows flawless color mixing, maximum optical efficiency and removes halos
- Low dome design eliminates trade-offs between flux and source size
- Hot tested—removes guesswork for designers
- Industry's lowest thermal resistance means greater light output and lower heatsink costs

Product Bin and Labeling Definitions

Decoding Product Bin Labeling

In the manufacturing of semiconductor products, there are variations in performance around the average values given in the technical datasheet. For this reason, Lumileds bins LED components for luminous flux, radiometric power, color point, peak wavelength, dominant wavelength and forward voltage.

LUXEON C Color Line LEDs are labeled using a 4-digit alphanumeric CAT code following the format below:

A B C D

Where:

- **A** – designates luminous flux bin or radiometric power bin (luminous flux bin example: A=20 to 25 lm, B=25 to 30 lm; radiometric power bin example: Far Red C=280 to 320mW, Royal Blue J=520 to 560mW)
- **B C** – designates color bin, peak wavelength bin or dominant wavelength bin (peak wavelength bin example: Deep Red 10=655 to 665nm; dominant wavelength bin example: Red 40=624 to 634nm)
- **D** – designates forward voltage bin (example: A=1.70 to 1.90V, B=1.90 to 2.10V)

Therefore, a LUXEON C Red LED with a lumen range of 20 to 25 lm, a dominant wavelength of 624 to 634nm and a forward voltage range of 1.70 to 1.90V has the following CAT code:

A 4 0 A

Table 5 lists the standard photometric luminous flux bins for LUXEON C Color Line emitters. Although several bins are outlined, product availability in a particular bin varies by production run and by product performance. Not all bins are available in all CCTs.
