

**THE DATASHEET OF  
MTFC4GLGDM-AIT Z TR**

# e-MMC Memory

**MTFC4GLGDM-AIT Z, MTFC4GLGDM-AIT A, MTFC8GLGDM-AIT Z,  
MTFC16GJGEF-AIT Z, MTFC32GJGEF-AIT Z**

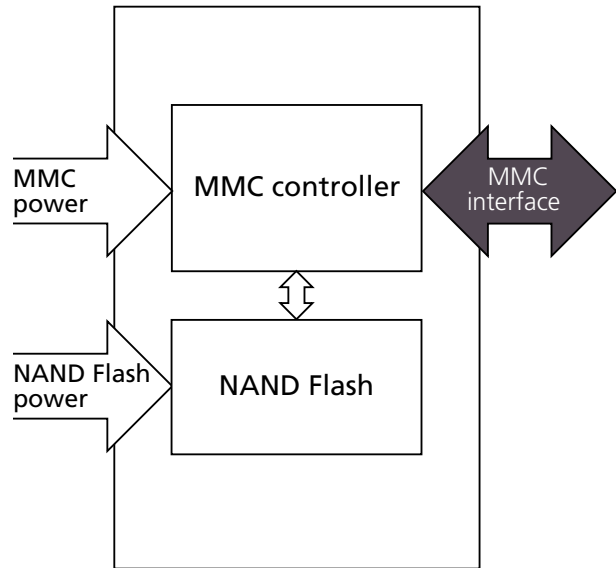

## Features

- MultiMediaCard (MMC) controller and NAND Flash
- 153- or 169-ball TFBGA (RoHS 6/6-compliant)
- $V_{CC}$ : 2.7–3.6V
- $V_{CCQ}$  (dual voltage): 1.65–1.95V; 2.7–3.6V
- Temperature ranges
  - Operating temperature:  $-40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$
  - Storage temperature:  $-40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$
- Typical current consumption
  - Standby current: 130–180 $\mu\text{A}$  (dependent on part number)
  - Active current (RMS): 75mA (4GB), 100mA (8GB, 16GB, 32GB)

## MMC-Specific Features

- JEDEC/MMC standard version 4.41-compliant (JEDEC Standard No. 84-A441) – SPI mode not supported (see [www.jedec.org/sites/default/files/docs/JESD84-A441.pdf](http://www.jedec.org/sites/default/files/docs/JESD84-A441.pdf))
  - Advanced 11-signal interface
  - x1, x4, and x8 I/Os, selectable by host
  - MMC mode operation
  - Command classes: class 0 (basic); class 2 (block read); class 4 (block write); class 5 (erase); class 6 (write protection); class 7 (lock card)
  - Temporary write protection
  - 52 MHz clock speed (MAX)
  - Boot operation (high-speed boot)
  - Sleep mode
  - Replay-protected memory block (RPMB)
  - Secure erase and trim
  - Hardware reset signal
  - Multiple partitions with enhanced attribute
  - Permanent and power-on write protection
  - Double data rate (DDR) function
  - High-priority interrupt (HPI)

**Figure 1: Micron e-MMC Device**

## MMC-Specific Features (Continued)

- Background operation
- Enhanced reliable write
- Fully enhanced configurable
- Backward-compatible with previous MMC modes
- ECC and block management implemented

## e-MMC Performance

**Table 1: MLC Partition Performance**

Condition	Typical Values			Units
	MTFC4GLGDM-AIT Z MTFC4GLGDM-AIT A	MTFC8GLGDM-AIT Z	MTFC16GJGEF-AIT Z MTFC32GJGEF-AIT Z	
Sequential write	6.6	13.5	20	MB/s
Sequential read	27	44	44	MB/s
Random write	90	90	100	IOPS
Random read	1080	1080	1100	IOPS

Note: 1. Bus in x8 I/O mode. Sequential access of 1MB chunk; random access of 4KB chunk over 1GB span. Additional performance data, such as system performance on a specific application board, will be provided in a separate document upon customer request.

## Part Numbering Information

Micron® e-MMC memory devices are available in different configurations and densities.

**Figure 2: e-MMC Part Numbering**

## 4GB, 8GB, 16GB, 32GB: e-MMC (Automotive) Features

**Table 2: Ordering Information**

Manufacturing Part Number	Density	Package	NAND Flash Type	Shipping Media
MTFC4GLGDM-AIT Z MTFC4GLGDM-AIT A	4GB	153-ball TFBGA 11.5mm x 13.0mm x 1.2mm	1 x 32Gb, 25nm, MLC	Tray/Tape and reel
MTFC8GLGDM-AIT Z	8GB	153-ball TFBGA 11.5mm x 13.0mm x 1.2mm	2 x 32Gb, 25nm, MLC	Tray/Tape and reel
MTFC16GJGEF-AIT Z	16GB	169-ball TFBGA 14.0mm x 18.0mm x 1.2mm	2 x 64Gb, 25nm, MLC	Tray/Tape and reel
MTFC32GJGEF-AIT Z	32GB	169-ball TFBGA 14.0mm x 18.0mm x 1.2mm	4 x 64Gb, 25nm, MLC	Tray/Tape and reel

## Important Notes and Warnings

Micron Technology, Inc. ("Micron") reserves the right to make changes to information published in this document, including without limitation specifications and product descriptions. This document supersedes and replaces all information supplied prior to the publication hereof. You may not rely on any information set forth in this document if you obtain the product described herein from any unauthorized distributor or other source not authorized by Micron.

**Automotive Applications.** Products are not designed or intended for use in automotive applications unless specifically designated by Micron as automotive-grade by their respective data sheets. Distributor and customer/distributor shall assume the sole risk and liability for and shall indemnify and hold Micron harmless against all claims, costs, damages, and expenses and reasonable attorneys' fees arising out of, directly or indirectly, any claim of product liability, personal injury, death, or property damage resulting directly or indirectly from any use of non-automotive-grade products in automotive applications. Customer/distributor shall ensure that the terms and conditions of sale between customer/distributor and any customer of distributor/customer (1) state that Micron products are not designed or intended for use in automotive applications unless specifically designated by Micron as automotive-grade by their respective data sheets and (2) require such customer of distributor/customer to indemnify and hold Micron harmless against all claims, costs, damages, and expenses and reasonable attorneys' fees arising out of, directly or indirectly, any claim of product liability, personal injury, death, or property damage resulting from any use of non-automotive-grade products in automotive applications.

**Critical Applications.** Products are not authorized for use in applications in which failure of the Micron component could result, directly or indirectly in death, personal injury, or severe property or environmental damage ("Critical Applications"). Customer must protect against death, personal injury, and severe property and environmental damage by incorporating safety design measures into customer's applications to ensure that failure of the Micron component will not result in such harms. Should customer or distributor purchase, use, or sell any Micron component for any critical application, customer and distributor shall indemnify and hold harmless Micron and its subsidiaries, subcontractors, and affiliates and the directors, officers, and employees of each against all claims, costs, damages, and expenses and reasonable attorneys' fees arising out of, directly or indirectly, any claim of product liability, personal injury, or death arising in any way out of such critical application, whether or not Micron or its subsidiaries, subcontractors, or affiliates were negligent in the design, manufacture, or warning of the Micron product.

**Customer Responsibility.** Customers are responsible for the design, manufacture, and operation of their systems, applications, and products using Micron products. ALL SEMICONDUCTOR PRODUCTS HAVE INHERENT FAILURE RATES AND LIMITED USEFUL LIVES. IT IS THE CUSTOMER'S SOLE RESPONSIBILITY TO DETERMINE WHETHER THE MICRON PRODUCT IS SUITABLE AND FIT FOR THE CUSTOMER'S SYSTEM, APPLICATION, OR PRODUCT. Customers must ensure that adequate design, manufacturing, and operating safeguards are included in customer's applications and products to eliminate the risk that personal injury, death, or severe property or environmental damages will result from failure of any semiconductor component.

**Limited Warranty.** In no event shall Micron be liable for any indirect, incidental, punitive, special or consequential damages (including without limitation lost profits, lost savings, business interruption, costs related to the removal or replacement of any products or rework charges) whether or not such damages are based on tort, warranty, breach of contract or other legal theory, unless explicitly stated in a written agreement executed by Micron's duly authorized representative.

## **General Description**

Micron *e*-MMC is a communication and mass data storage device that includes a Multi-MediaCard (MMC) interface, a NAND Flash component, and a controller on an advanced 11-signal bus, which is compliant with the MMC system specification. Its cost per bit, small package sizes, and high reliability make it an ideal choice for automotive applications, including information and entertainment, navigation tools, advanced driving assistance systems, and a variety of other industrial and portable products.

The nonvolatile *e*-MMC draws no power to maintain stored data, delivers high performance across a wide range of operating temperatures, and resists shock and vibration disruption.

## Signal Descriptions

**Table 3: Signal Descriptions**

Symbol	Type	Description
CLK	Input	Clock: Each cycle of the clock directs a transfer on the command line and on the data line(s). The frequency can vary between the minimum and the maximum clock frequency.
RST_n	Input	Reset: The RST_n signal is used by the host for resetting the device, moving the device to the pre-idle state. By default, the RST_n signal is temporarily disabled in the device. The host must set ECSD register byte 162, bits[1:0] to 0x1 to enable this functionality before the host can use it.
CMD	I/O	Command: This signal is a bidirectional command channel used for command and response transfers. The CMD signal has two bus modes: open-drain mode and push-pull mode (see Operating Modes). Commands are sent from the MMC host to the device, and responses are sent from the device to the host.
DAT[7:0]	I/O	Data I/O: These are bidirectional data signals. The DAT signals operate in push-pull mode. By default, after power-on or assertion of the RST_n signal, only DAT0 is used for data transfer. The MMC controller can configure a wider data bus for data transfer either using DAT[3:0] (4-bit mode) or DAT[7:0] (8-bit mode). e.MMC includes internal pull-up resistors for data lines DAT[7:1]. Immediately after entering the 4-bit mode, the device disconnects the internal pull-up resistors on the DAT[3:1] lines. Upon entering the 8-bit mode, the device disconnects the internal pull-ups on the DAT[7:1] lines.
V <sub>CC</sub>	Supply	V <sub>CC</sub> : NAND interface (I/F) I/O and NAND Flash power supply.
V <sub>CCQ</sub>	Supply	V <sub>CCQ</sub> : e.MMC controller core and e.MMC I/F I/O power supply.
V <sub>SS</sub> <sup>1</sup>	Supply	V <sub>SS</sub> : NAND I/F I/O and NAND Flash ground connection.
V <sub>SSQ</sub> <sup>1</sup>	Supply	V <sub>SSQ</sub> : e.MMC controller core and e.MMC I/F ground connection.
V <sub>DDIM</sub>		Internal voltage node: At least a 0.1µF capacitor is required to connect V <sub>DDIM</sub> to ground. A 1µF capacitor is recommended. Do not tie to supply voltage or ground.
NC	–	No connect: No internal connection is present.
RFU	–	Reserved for future use: No internal connection is present. Leave it floating externally.

Note: 1. V<sub>SS</sub> and V<sub>SSQ</sub> are connected internally.

**4GB, 8GB, 16GB, 32GB: e-MMC (Automotive)  
153-Ball Signal Assignments**

**153-Ball Signal Assignments**

**Figure 3: 153 Ball (Top View, Ball Down)**

- Notes:
1. Some previous versions of the JEDEC product or mechanical specification had defined reserved for future use (RFU) balls as no connect (NC) balls. NC balls assigned in the previous specifications could have been connected to ground on the system board. To enable new feature introduction, some of these balls are assigned as RFU in the v4.4 mechanical specification. Any new PCB footprint implementations should use the new ball assignments and leave the RFU balls floating on the system board.
  2. V<sub>CC</sub>, V<sub>CCQ</sub>, V<sub>SS</sub>, and V<sub>SSQ</sub> balls must all be connected on the system board.

**4GB, 8GB, 16GB, 32GB: e-MMC (Automotive)  
169-Ball Signal Assignments**

**169-Ball Signal Assignments**

**Figure 4: 169 Ball (Top View, Ball Down)**

Notes: 1. Empty balls do not denote actual solder balls; they are position indicators only.

## 4GB, 8GB, 16GB, 32GB: e-MMC (Automotive) 169-Ball Signal Assignments

---

2. Some previous versions of the JEDEC product or mechanical specification had defined reserved for future use (RFU) balls as no connect (NC) balls. NC balls assigned in the previous specifications could have been connected to ground on the system board. To enable new feature introduction, some of these balls are assigned as RFU in the v4.4 mechanical specification. Any new PCB footprint implementations should use the new ball assignments and leave the RFU balls floating on the system board.
3.  $V_{CC}$ ,  $V_{CCQ}$ ,  $V_{SS}$ , and  $V_{SSQ}$  balls must all be connected on the system board.

## Package Dimensions

Figure 5: 153-Ball TFBGA – 11.5mm x 13.0mm x 1.2mm (Package Code: DM)

- Notes:
1. Dimensions are in millimeters.
  2. Solder ball material: LF35 (98.25% Sn, 1.2% Ag, 0.5% Cu, 0.05% Ni) w/ CuOSP.
  3. Test pads are not solder balls and are for Micron internal use only.

**4GB, 8GB, 16GB, 32GB: e-MMC (Automotive)  
Package Dimensions**

**Figure 6: 169-Ball TFBGA – 14.0mm x 18.00mm x 1.2mm (Package Code: EF)**

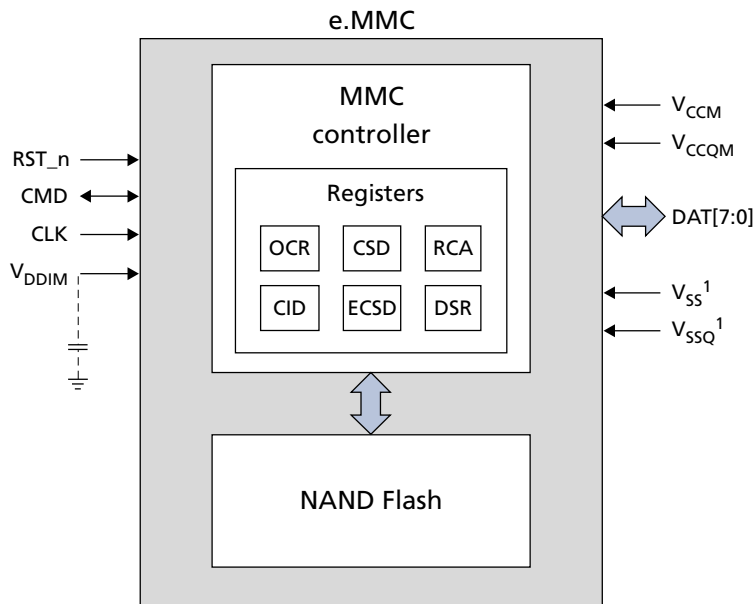

- Notes:
1. Dimensions are in millimeters.
  2. Solder ball material: LF35 (98.25% Sn, 1.2% Ag, 0.5% Cu, 0.05% Ni) w/ CuOSP.
  3. Test pads are not solder balls and are for Micron internal use only.

## Architecture

**Figure 7: e.MMC Functional Block Diagram**

Note: 1. V<sub>SS</sub> and V<sub>SSQ</sub> are internally connected.

### MMC Protocol Independent of NAND Flash Technology

The MMC specification defines the communication protocol between a host and a device. The protocol is independent of the NAND Flash features included in the device. The device has an intelligent on-board controller that manages the MMC communication protocol.

The controller also handles block management functions such as logical block allocation and wear leveling. These management functions require complex algorithms and depend entirely on NAND Flash technology (generation or memory cell type).

The device handles these management functions internally, making them invisible to the host processor.

### Defect and Error Management

Micron e.MMC incorporates advanced technology for defect and error management. If a defective block is identified, the device completely replaces the defective block with one of the spare blocks. This process is invisible to the host and does not affect data space allocated for the user.

The device also includes a built-in error correction code (ECC) algorithm to ensure that data integrity is maintained.

To make the best use of these advanced technologies and ensure proper data loading and storage over the life of the device, the host must exercise the following precautions:

- Check the status after WRITE, READ, and ERASE operations.
- Avoid power-down during WRITE and ERASE operations.

## OCR Register

The 32-bit operation conditions register (OCR) stores the voltage profile of the card and the access mode indication. In addition, this register includes a status information bit.

**Table 4: OCR Parameters**

OCR Bits	OCR Value	Description
[31]	1b (ready)/0b (busy) <sup>1</sup>	Device power-on status bit
[30:29]	10b	Sector mode
[28:24]	0 0000b	Reserved
[23:15]	1 1111 1111b	2.7–3.6V voltage range
[14:8]	000 0000b	2.0–2.7V voltage range
[7]	1b	1.70–1.95V voltage range
[6:0]	000 0000b	Reserved

Note: 1. OCR = C0FF8080h after the device has completed power-up.

## CID Register

The card identification (CID) register is 128 bits wide. It contains the device identification information used during the card identification phase as required by e.MMC protocol. Each device is created with a unique identification number.

**Table 5: CID Register Field Parameters**

Name	Field	Width	CID Bits	CID Value
Manufacturer ID	MID	8	[127:120]	FEh
Reserved	–	6	[119:114]	–
Card/BGA	CBX	2	[113:112]	01h
OEM/application ID	OID	8	[111:104]	–
Product name	PNM	48	[103:56]	–
Product revision	PRV	8	[55:48]	–
Product serial number	PSN	32	[47:16]	–
Manufacturing date	MDT	8	[15:8]	–
CRC7 checksum	CRC	7	[7:1]	–
Not used; always 1	–	1	[0]	–

## CSD Register

The card-specific data (CSD) register provides information about accessing the device contents. The CSD register defines the data format, error correction type, maximum data access time, and data transfer speed, as well as whether the DS register can be used. The programmable part of the register (entries marked with W or E in the following table) can be changed by the PROGRAM\_CSD (CMD27) command.

**Table 6: CSD Register Field Parameters**

Name	Field	Width	Cell Type <sup>1</sup>	CSD Bits	CSD Value	
CSD structure	CSD_STRUCTURE	2	R	[127:126]	3h	
System specification version	SPEC_VERS	4	R	[125:122]	4h	
Reserved <sup>2</sup>	–	2	TBD	[121:120]	–	
Data read access time 1	TAAC	8	R	[119:112]	4Fh	
Data read access time 2 in CLK cycles (NSAC × 100)	NSAC	8	R	[111:104]	01h

Maximum write current at V <sub>DD,min</sub>	VDD_W_CURR_MIN	3	R	[55:53]	7h	
Maximum write current at V <sub>DD,max</sub>	VDD_W_CURR_MAX	3	R	[52:50]	7h	
Device size multiplier	C_SIZE_MULT	3	R	[49:47]	7h	
Erase group size	ERASE_GRP_SIZE	5	R	[46:42]	1Fh	
Erase group size multiplier	ERASE_GRP_MULT	5	R	[41:37]	1Fh	
Write protect group size	WP_GRP_SIZE	MTFC4GLGDM-AIT Z	R	[36:32]	07h	
		MTFC4GLGDM-AIT A				
		MTFC8GLGDM-AIT Z				0Fh
		MTFC16GJGEF-AIT Z				1Fh
		MTFC32GJGEF-AIT Z				
Write protect group enable	WP_GRP_ENABLE	1	R	31	1h	
Manufacturer default ECC	DEFAULT_ECC	2	R	[30:29]	0h	
Write-speed factor	R2W_FACTOR	3	R	[28:26]	2h	
Maximum write data block length	WRITE_BL_LEN	4	R	[25:22]	9h	
Partial blocks for writes supported	WRITE_BL_PARTIAL	1	R	21	0h	

**Table 6: CSD Register Field Parameters (Continued)**

Name	Field	Width	Cell Type <sup>1</sup>	CSD Bits	CSD Value
Reserved	–	4	R	[20:17]	–
Content protection application	CONTENT_PROT_APP	1	R	16	0h
File-format group	FILE_FORMAT_GRP	1	R/W	15	0h
Copy flag (OTP)	COPY	1	R/W	14	0h
Permanent write protection	PERM_WRITE_PROTECT	1	R/W	13	0h
Temporary write protection	TMP_WRITE_PROTECT	1	R/W/E	12	0h
File format	FILE_FORMAT	2	R/W	[11:10]	0h
ECC	ECC	2	R/W/E	[9:8]	0h
CRC	CRC	7	R/W/E	[7:1]	–
Not used; always 1	–	1	–	0	1h

Notes: 1. R = Read-only

R/W = One-time programmable and readable

R/W/E = Multiple writable with value kept after a power cycle, assertion of the RST\_n signal, and any CMD0 reset, and readable

TBD = To be determined

2. Reserved bits should be read as 0.

3. If  $(2.7V \leq V_{CCQ} \leq 3.6V)$ , Micron recommends evaluating a reduction of the  $I_{PEAK, max}$  driving capability to 8mA or 4mA using the SET\_DSR command (CMD4). The optimal setting must be selected according to the actual capacitive load on the eMMC interface signals in the user application board.

<b>CMD4 Argument</b>	<b>Driving Capability (mA)</b>
0x01000000	4
0x02000000	8
0x04000000	12 (default)
0x08000000	16
0x10000000	20
0x20000000	24
0x40000000	28
0x80000000	32

## ECSD Register

The 512-byte extended card-specific data (ECSD) register defines device properties and selected modes. The most significant 320 bytes are the properties segment. This segment defines device capabilities and cannot be modified by the host. The lower 192 bytes are the modes segment. The modes segment defines the configuration in which the device is working. The host can change the properties of modes segments using the SWITCH command.

**Table 7: ECSD Register Field Parameters**

Reserved	-		134	-	[133:0]	-

Notes: 1. R = Read-only

R/W = One-time programmable and readable

R/W/E = Multiple writable with the value kept after a power cycle, assertion of the RST<sub>n</sub> signal, and any CMD0 reset, and readable

R/W/C\_P = Writable after the value is cleared by a power cycle and assertion of the RST<sub>n</sub> signal (the value not cleared by CMD0 reset) and readable

R/W/E\_P = Multiple writable with the value reset after a power cycle, assertion of the RST<sub>n</sub> signal, and any CMD0 reset, and readable

W/E\_P = Multiple writable with the value reset after power cycle, assertion of the RST<sub>n</sub> signal, and any CMD0 reset, and not readable

TBD = To be determined

2. Reserved bits should be read as 0.

3. Micron has tested power failure under best application knowledge conditions with positive results. Customers may request a dedicated test for their specific application condition.

4. Once WRITE operations have been made on the boot partitions (1 or 2), the PARTITION\_ACCESS bits[2:0] must be reset to correctly validate the modifications.

5. The SECURE ERASE commands are not supported if ERASE\_GROUP\_DEF = 0.

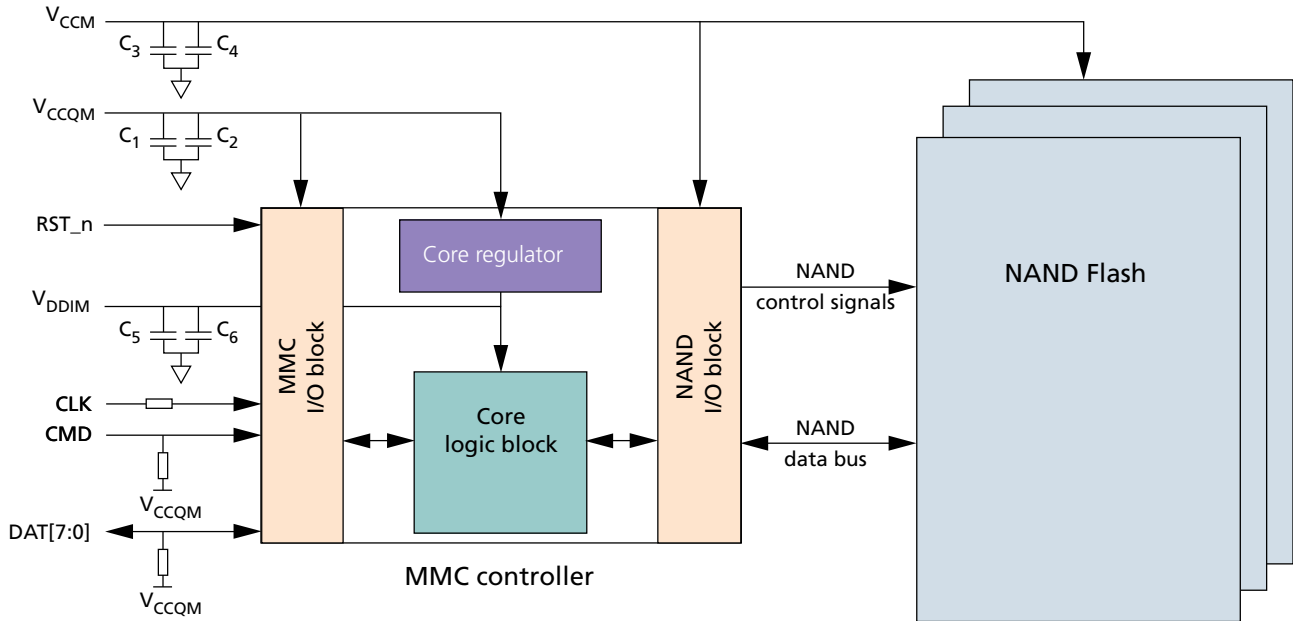

## DC Electrical Specifications – Device Power

The device current consumption for various device configurations is defined in the power class fields of the ECSD register.

$V_{CC}$  is used for the NAND Flash device and its interface voltage;  $V_{CCQ}$  is used for the controller and the e.MMC interface voltage.

**Figure 8: Device Power Diagram**

**Table 8: Absolute Maximum Ratings**

Parameters	Symbol	Min	Max	Unit
Voltage input	$V_{IN}$	-0.6	4.6	V
$V_{CC}$ supply	$V_{CC}$	-0.6	4.6	V
$V_{CCQ}$ supply	$V_{CCQ}$	-0.6	4.6	V
Storage temperature	$T_{STG}$	-40	85	°C

Note: 1. Voltage on any pin relative to  $V_{SS}$ .

## 4GB, 8GB, 16GB, 32GB: e-MMC (Automotive) DC Electrical Specifications – Device Power

**Table 9: Capacitor and Resistance Specifications**

Parameter	Symbol	Typ	Units	Notes
Pull-up resistance: CMD	R_CMD	10	kΩ	1
Pull-up resistance: DAT[7:0]	R_DAT	50	kΩ	1
Pull-up resistance: RST_n	R_RST_n	50	kΩ	2
CLK/CMD/DAT[7:0] impedance		50	Ω	3
Serial resistance on CLK	SR_CLK	22	Ω	
V <sub>CCQ</sub> capacitor	C1	2.2	μF	4
	C2	0.1		
V <sub>CC</sub> capacitor (≤8GB)	C3	2.2	μF	5
	C4	0.1		
V <sub>CC</sub> capacitor (>8GB)	C3	4.7	μF	5
	C4	0.22		
V <sub>DDIM</sub> capacitor (C <sub>reg</sub> )	C5	1	μF	6
	C6	0.1		

- Notes:
- Used to prevent bus floating.
  - If host does not use H/W RESET (RST\_n), pull-up resistance is not needed on RST\_n line (Extended\_CSD[162] = 00h).
  - Impedance match.
  - The coupling capacitor should be connected with V<sub>CCQ</sub> and V<sub>SSQ</sub> as closely as possible.
  - The coupling capacitor should be connected with V<sub>CC</sub> and V<sub>SS</sub> as closely as possible.
  - The coupling capacitor should be connected with V<sub>DDIM</sub> and V<sub>SS</sub> as closely as possible.

## Revision History

### Rev. B – 1/19

- Added MPN

### Rev. A – 02/13

- Initial release
