

Varistors (ZNR Surge Absorber)

D type

V series

For Varistor Voltages ranging from 200 to 1100V, kindly also consider corresponding, smaller E Series devices with better performance for their size. → [Please click here](#)

Features

- Large withstanding surge current capability in compact sizes
- Large “Energy Handling Capability” absorbing transient overvoltages in compact sizes
- Wide range of varistor voltages
- RoHS compliant

Recommended applications

- Transistor, diode, IC, thyristor or triac semiconductor protection
- Surge protection in consumer electronic equipment
- Surge protection in communication, measuring or controller electronics
- Surge protection in electronic home appliances, gas or petroleum appliances

Applicable standards

- UL1449 (VZCA2/UL, VZCA8/C-UL)
- VDE IEC61051-1, -2, -2-2, IEC60950-1 Annex.Q, IEC62368-1 G8.1
- CSA C22.2 N 269.5
- CQC (GB/T10193, GB/T10194, GB4943.1)

Refer to "Standard Products" , and "Application Note for Safety Standards" , for the details.

■ As for handling precautions and minimum quantity / Packing unit please see related information.

Application note for safety standards

- Approvals products lists in "Reference Guide to Standard Products."
- UL and VDE : Registered in "Type name", it isn't registered in "Panasonic Part No."
- CQC : Registered in "Panasonic Part No."
- "Rated Voltages" are specified for UL recognized components in list shown below.

The AC rated voltage and maximum allowable voltage

Type name	Maximum allowable voltage		Rated voltage (Vrms)	
	ACrms (V)	DC (V)	UL1449	CSA C22.2 No.269.5

Performance characteristics

Characteristics		Test methods / description	Specifications																																																																					
Standard test condition		Electrical measurements (initial/after tests) shall be conducted at temperature of 5 to 35 °C, relative humidity of maximum 85 %.	—																																																																					
Electrical	Varistor voltage	The voltage between two terminals with the specified measuring current C_{mA} DC applied is called VC or V_{CmA} . The measurement shall be made as fast as possible to avoid heat affection.	To meet the specified value.																																																																					
	Maximum allowable voltage	The maximum sinusoidal RMS voltage or maximum DC voltage that can be applied continuously.																																																																						
	Clamping voltage	The maximum voltage between two terminals with the specified standard impulse current (8/20 μ s) illustrated below applied. 																																																																						
	Rated power	The power that can be applied in the specified ambient temperature.																																																																						
	Maximum energy	The maximum energy within the varistor voltage change of ± 10 % when a single impulse current of 2 ms or 10/1000 μ s is applied.																																																																						
	Maximum peak current (Withstanding Surge Current)	2 times		The maximum current within the varistor voltage change of ± 10 % when a standard impulse current of 8/20 μ s is applied two times with an interval of 5 minutes.																																																																				
		1 time		The maximum current within the varistor voltage change of ± 10 % with a single standard impulse current of 8/20 μ s is applied.																																																																				
	Temperature coefficient of varistor voltage	$\frac{V_{CmA} \text{ at } 85 \text{ }^\circ\text{C} - V_{CmA} \text{ at } 25 \text{ }^\circ\text{C}}{V_{CmA} \text{ at } 25 \text{ }^\circ\text{C}} \times \frac{1}{60} 100(\%/^\circ\text{C})$		0 to -0.05 %/ °C max.																																																																				
	Capacitance	Capacitance shall be measured at 1 kHz ± 10 %, 1 Vrms max. (1 MHz ± 10 % below 100 pF), 0 V bias and 20 \pm 2 °C.		To meet the specified value.																																																																				
	Withstanding voltage (Body Insulation)	The specified voltage shall be applied between both terminals of the specimen connected together and metal foil closely wrapped round its body for 1 minute. <table border="1" data-bbox="438 1355 1228 1467"> <thead> <tr> <th>Classification (Nominal varistor voltage)</th> <th>Test Voltage (AC)</th> </tr> </thead> <tbody> <tr> <td>$V_{0.1 \text{ mA}}, V_{1 \text{ mA}} \leq 330 \text{ V}$</td> <td>1000 Vrms</td> </tr> <tr> <td>$V_{0.1 \text{ mA}}, V_{1 \text{ mA}} > 330 \text{ V}$</td> <td>1500 Vrms</td> </tr> </tbody> </table>		Classification (Nominal varistor voltage)	Test Voltage (AC)	$V_{0.1 \text{ mA}}, V_{1 \text{ mA}} \leq 330 \text{ V}$	1000 Vrms	$V_{0.1 \text{ mA}}, V_{1 \text{ mA}} > 330 \text{ V}$	1500 Vrms	No breakdown																																																														
Classification (Nominal varistor voltage)	Test Voltage (AC)																																																																							
$V_{0.1 \text{ mA}}, V_{1 \text{ mA}} \leq 330 \text{ V}$	1000 Vrms																																																																							
$V_{0.1 \text{ mA}}, V_{1 \text{ mA}} > 330 \text{ V}$	1500 Vrms																																																																							
Impulse life	The change of VC shall be measured after the impulse current listed below is applied 10000 or 100000 times continuously with the interval of 10 seconds at room temperature. <table border="1" data-bbox="470 1568 1228 2139"> <thead> <tr> <th rowspan="2">Part No.</th> <th rowspan="2">Item</th> <th>Impulse Life(I)</th> <th>Impulse Life(II)</th> </tr> <tr> <th>Times</th> <th>Times</th> </tr> <tr> <th colspan="2">Current</th> <th>$\times 10^4$ Times</th> <th>$\times 10^5$ Times</th> </tr> </thead> <tbody> <tr> <td>ERZV05D180 to ERZV05D680</td> <td>8 A (8/20 μs)</td> <td>5 A (8/20 μs)</td> <td></td> </tr> <tr> <td>ERZV07D180 to ERZV07D680</td> <td>25 A (8/20 μs)</td> <td>15 A (8/20 μs)</td> <td></td> </tr> <tr> <td>ERZV09D180 to ERZV09D680</td> <td>50 A (8/20 μs)</td> <td>35 A (8/20 μs)</td> <td></td> </tr> <tr> <td>ERZV10D180 to ERZV10D680</td> <td>50 A (8/20 μs)</td> <td>35 A (8/20 μs)</td> <td></td> </tr> <tr> <td>ERZV14D180 to ERZV14D680</td> <td>90 A (8/20 μs)</td> <td>50 A (8/20 μs)</td> <td></td> </tr> <tr> <td>ERZV20D180 to ERZV20D680</td> <td>130 A (8/20 μs)</td> <td>65 A (8/20 μs)</td> <td></td> </tr> <tr> <td>ERZV05D820 to ERZV05D471</td> <td>40 A (8/20 μs)</td> <td>25 A (8/20 μs)</td> <td></td> </tr> <tr> <td>ERZV07D820 to ERZV07D511</td> <td>100 A (8/20 μs)</td> <td>60 A (8/20 μs)</td> <td></td> </tr> <tr> <td>ERZV09D820 to ERZV09D511</td> <td>150 A (8/20 μs)</td> <td>85 A (8/20 μs)</td> <td></td> </tr> <tr> <td>ERZV10D820 to ERZV10D112</td> <td>150 A (8/20 μs)</td> <td>85 A (8/20 μs)</td> <td></td> </tr> <tr> <td>ERZV10D182CS</td> <td>120 A (8/20 μs)</td> <td>75 A (8/20 μs)</td> <td></td> </tr> <tr> <td>ERZV14D820 to ERZV14D112</td> <td>200 A (8/20 μs)</td> <td>110 A (8/20 μs)</td> <td></td> </tr> <tr> <td>ERZV14D182CS</td> <td>150 A (8/20 μs)</td> <td>90 A (8/20 μs)</td> <td></td> </tr> <tr> <td>ERZV20D820 to ERZV20D112</td> <td>250 A (8/20 μs)</td> <td>120 A (8/20 μs)</td> <td></td> </tr> <tr> <td>ERZV20D182</td> <td>200 A (8/20 μs)</td> <td>100 A (8/20 μs)</td> <td></td> </tr> </tbody> </table>	Part No.	Item	Impulse Life(I)	Impulse Life(II)	Times	Times	Current		$\times 10^4$ Times	$\times 10^5$ Times	ERZV05D180 to ERZV05D680	8 A (8/20 μ s)	5 A (8/20 μ s)		ERZV07D180 to ERZV07D680	25 A (8/20 μ s)	15 A (8/20 μ s)		ERZV09D180 to ERZV09D680	50 A (8/20 μ s)	35 A (8/20 μ s)		ERZV10D180 to ERZV10D680	50 A (8/20 μ s)	35 A (8/20 μ s)		ERZV14D180 to ERZV14D680	90 A (8/20 μ s)	50 A (8/20 μ s)		ERZV20D180 to ERZV20D680	130 A (8/20 μ s)	65 A (8/20 μ s)		ERZV05D820 to ERZV05D471	40 A (8/20 μ s)	25 A (8/20 μ s)		ERZV07D820 to ERZV07D511	100 A (8/20 μ s)	60 A (8/20 μ s)		ERZV09D820 to ERZV09D511	150 A (8/20 μ s)	85 A (8/20 μ s)		ERZV10D820 to ERZV10D112	150 A (8/20 μ s)	85 A (8/20 μ s)		ERZV10D182CS	120 A (8/20 μ s)	75 A (8/20 μ s)		ERZV14D820 to ERZV14D112	200 A (8/20 μ s)	110 A (8/20 μ s)		ERZV14D182CS	150 A (8/20 μ s)	90 A (8/20 μ s)		ERZV20D820 to ERZV20D112	250 A (8/20 μ s)	120 A (8/20 μ s)		ERZV20D182	200 A (8/20 μ s)	100 A (8/20 μ s)		$\Delta V_{CmA}/V_{CmA} \leq \pm 10$ %

Performance characteristics

Characteristics	Test methods / description	Specifications																
Mechanical	<p>Robustness of terminations (Tensile)</p> <p>After gradually applying the force specified below and keeping the unit fixed for 10 seconds, the terminal shall be visually examined for any damage.</p> <table style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="border-bottom: 1px solid black; text-align: center;">Terminal diameter</th> <th style="border-bottom: 1px solid black; text-align: center;">Force</th> </tr> </thead> <tbody> <tr> <td style="text-align: center;">ø0.6 mm, ø0.8 mm</td> <td style="text-align: center;">9.8 N</td> </tr> <tr> <td style="text-align: center;">ø1.0 mm</td> <td style="text-align: center;">19.6 N</td> </tr> </tbody> </table>	Terminal diameter	Force	ø0.6 mm, ø0.8 mm	9.8 N	ø1.0 mm	19.6 N	No remarkable mechanical damage										
	Terminal diameter	Force																
	ø0.6 mm, ø0.8 mm	9.8 N																
	ø1.0 mm	19.6 N																
	<p>Robustness of terminations (Bending)</p> <p>The unit shall be secured with its terminal kept vertical and the force specified below shall be applied in the axial direction. The terminal shall gradually be bent by 90 ° in one direction, then 90 ° in the opposite direction, and again back to the original position. The damage of the terminal shall be visually examined.</p> <table style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="border-bottom: 1px solid black; text-align: center;">Terminal diameter</th> <th style="border-bottom: 1px solid black; text-align: center;">Force</th> </tr> </thead> <tbody> <tr> <td style="text-align: center;">ø0.6 mm, ø0.8 mm</td> <td style="text-align: center;">4.9 N</td> </tr> <tr> <td style="text-align: center;">ø1.0 mm</td> <td style="text-align: center;">9.8 N</td> </tr> </tbody> </table>	Terminal diameter	Force	ø0.6 mm, ø0.8 mm	4.9 N	ø1.0 mm	9.8 N											
Terminal diameter	Force																	
ø0.6 mm, ø0.8 mm	4.9 N																	
ø1.0 mm	9.8 N																	
Vibration	After repeatedly applying a single harmonic vibration (amplitude: 0.75 mm, double amplitude: 1.5 mm) with 1 minute vibration frequency cycles (10 Hz to 55 Hz to 10 Hz) to each of three perpendicular directions for 2 hours. Thereafter, the unit shall be visually examined.																	
Solderability	After dipping the terminals to a depth of approximately 3 mm from the body in a soldering bath of 235±5 °C for 2±0.5 seconds, the terminal shall be visually examined.	Approximately 95 % of the terminals shall be covered with new solder uniformly.																
Resistance to soldering heat	After each lead shall be dipped into a solder bath having a temperature of 260±5 °C to a point 2.0 to 2.5 mm from the body of the unit, using shielding board (t=1.5 mm), be held there for 10±1 s and then be stored at room temperature and normal humidity for 1 hour or over. The change of V_{CmA} and mechanical damages shall be examined.	$\Delta V_{CmA}/V_{CmA} \leq \pm 5 \%$																
Environmental	High temperature storage/Dry heat	The specimen shall be subjected to 125±2 °C for 1000 hours in a thermostatic bath without load and then stored at room temperature and normal humidity for 1 hour or over. Thereafter, the change of V_{CmA} shall be measured.	$\Delta V_{CmA}/V_{CmA} \leq \pm 5 \%$															
	Humidity	The specimen shall be subjected to 40±2 °C, 90 to 95 % RH for 1000 hours without load and then stored at room temperature and normal humidity for 1 hour or over. Thereafter, the change of V_{CmA} shall be measured.	$\Delta V_{CmA}/V_{CmA} \leq \pm 5 \%$															
	Temperature cycle	<p>The temperature cycle shown below shall be repeated five cycles and then stored at room temperature and normal humidity for 1 hour or over. The change of V_{CmA} and mechanical damage shall be examined.</p> <table border="1" style="width: 100%; border-collapse: collapse; text-align: center;"> <thead> <tr> <th style="border-bottom: 1px solid black;">Step</th> <th style="border-bottom: 1px solid black;">Temperature (°C)</th> <th style="border-bottom: 1px solid black;">Period (minutes)</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>-40±3</td> <td>30±3</td> </tr> <tr> <td>2</td> <td>Room temperature</td> <td>15±3</td> </tr> <tr> <td>3</td> <td>125±2</td> <td>30±3</td> </tr> <tr> <td>4</td> <td>Room temperature</td> <td>15±3</td> </tr> </tbody> </table>	Step	Temperature (°C)	Period (minutes)	1	-40±3	30±3	2	Room temperature	15±3	3	125±2	30±3	4	Room temperature	15±3	$\Delta V_{CmA}/V_{CmA} \leq \pm 5 \%$ No remarkable mechanical damage
	Step	Temperature (°C)	Period (minutes)															
	1	-40±3	30±3															
2	Room temperature	15±3																
3	125±2	30±3																
4	Room temperature	15±3																
High temperature load/Dry heat load	After being continuously applied the Maximum Allowable Voltage at 85±2 °C for 1000 hours, the specimen shall be stored at room temperature and normal humidity for 1 hour or over. Thereafter, the change of V_{CmA} shall be measured.	$\Delta V_{CmA}/V_{CmA} \leq \pm 10 \%$																
Damp heat load/Humidity load	The specimen shall be subjected to 40±2 °C, 90 to 95 % RH and the Maximum Allowable Voltage for 1000 hours and then stored at room temperature and normal humidity for 1 hour or over. Thereafter, the change of V_{CmA} shall be measured.																	
Low temperature storage/Cold	The specimen shall be subjected to -40±2 °C without load for 1000 hours and then stored at room temperature and normal humidity for 1 hour or over. Thereafter, the change of V_{CmA} shall be measured.	$\Delta V_{CmA}/V_{CmA} \leq \pm 5 \%$

Part No., quantity and country of origin are designated on outer packages in English.

※ Please contact local sales office about packing specifications.

Design and specifications are each subject to change without notice. Ask factory for the current technical specifications before purchase and/or use.

Should a safety concern arise regarding this product, please be sure to contact us immediately.

Safety and Legal Matters to Be Observed

Product specifications and applications

- Please be advised that this product and product specifications are subject to change without notice for improvement purposes. Therefore, please request and confirm the latest delivery specifications that explain the specifications in detail before the final design, or purchase or use of the product, regardless of the application. In addition, do not use this product in any way that deviates from the contents of the company's delivery specifications.
- Unless otherwise specified in this catalog or the product specifications, this product is intended for use in general electronic equipment (AV products, home appliances, commercial equipment, office equipment, information and communication equipment, etc.).
When this product is used for the following special cases, the specification document suited to each application shall be signed/sealed (with Panasonic Industry and the user) in advance..These include applications requiring special quality and reliability, wherein their failures or malfunctions may directly threaten human life or cause harm to the human body (e.g.: space/aircraft equipment, transportation/traffic equipment, combustion equipment, medical equipment, disaster prevention/crime prevention equipment, safety equipment, etc.).

Safety design and product evaluation

- Please ensure safety through protection circuits, redundant circuits, etc., in the customer's system design so that a defect in our company's product will not endanger human life or cause other serious damage.
- This catalog shows the quality and performance of individual parts. The durability of parts varies depending on the usage environment and conditions. Therefore, please ensure to evaluate and confirm the state of each part after it has been mounted in your product in the actual operating environment before use.
If you have any doubts about the safety of this product, then please notify us immediately, and be sure to conduct a technical review including the above protection circuits and redundant circuits at your company.

Laws / Regulations / Intellectual property

- The transportation of dangerous goods as designated by UN numbers, UN classifications, etc., does not apply to this product. In addition, when exporting products, product specifications, and technical information described in this catalog, please comply with the laws and regulations of the countries to which the products are exported, especially those concerning security export control.
- Each model of this product complies with the RoHS Directive (Restriction of the use of hazardous substances in electrical and electronic equipment) (2011/65/EU and (EU) 2015/863). The date of compliance with the RoHS Directive and REACH Regulation varies depending on the product model.
Further, if you are using product models in stock and are not sure whether or not they comply with the RoHS Directive or REACH Regulation, please contact us by selecting "Sales Inquiry" from the inquiry form.
- During the manufacturing process of this product and any of its components and materials to be used, Panasonic Industry does not intentionally use ozone-depleting substances stipulated in the Montreal Protocol and specific bromine-based flame retardants such as PBBs (Poly-Brominated Biphenyls) / PBDEs (Poly-Brominated Diphenyl Ethers). In addition, the materials used in this product are all listed as existing chemical substances based on the Act on the Regulation of Manufacture and Evaluation of Chemical Substances.
- With regard to the disposal of this product, please confirm the disposal method in each country and region where it is incorporated into your company's product and used.
- The technical information contained in this catalog is intended to show only typical operation and application circuit examples of this product. This catalog does not guarantee that such information does not infringe upon the intellectual property rights of Panasonic Industry or any third party, nor imply that the license of such rights has been granted.
- Design, materials, or process related to technical owned by Panasonic Industry are subject to change without notice.

Panasonic Industry will assume no liability whatsoever if the use of our company's products deviates from the contents of this catalog or does not comply with the precautions. Please be advised of these restrictions.

Matters to Be Observed When Using This Product

(D-type : V series / SMD-type : HF·VF series)

Safety measures

An abnormal state for varistors (ZNR surge absorbers) of the D type/V series and SMD-Type/HF, VF Series (hereinafter the product or "the surge absorber") that results from a problem with service conditions (materials used, the surrounding environment, power conditions, circuit conditions, etc.) may cause a fire accident, electric shock accident, burn accident, or product failure. Matters to note when handling this product will hereinafter be described. What is described below should be checked sufficiently before the product is used.

■ Confirming rated capabilities

Use the surge absorber within the range of its rated capabilities. Each type of surge absorber has specified rated capabilities including a maximum allowable circuit voltage, a surge current tolerance, an energy tolerance, an impulse lifespan (surge lifespan), average pulse power, and a service temperature. Using the surge absorber under severe service conditions that are beyond the rated capabilities causes degraded performance of the surge absorber or destruction of a circuit element, which may lead to smoke generation, ignition, etc.

■ Take the following measures in order to avoid an accident caused by expected phenomenon.

- (1) Destruction of the surge absorber may scatter its fractured pieces around. To protect other elements from these pieces, set product in a case or shield it with a cover.
- (2) Do not place the surge absorber near combustible materials (vinyl cable, resin mold, etc.). If avoiding the vicinity of combustible materials is difficult, protect the combustible material with an incombustible cover.

(3) Surge absorber placed between lines

When the surge absorber is placed between lines, connect a normal type current fuse in series with the surge absorber.

* See "Current fuse" in the "Circuit design and circuit board design" section.

(4) Surge absorber placed between a line and the ground

- ① When the surge absorber is placed between a line and the ground, even if the surge absorber short-circuits, ground resistance will remain in the section between the line and the ground, leaving a possibility that the current fuse won't blow, in which case the outer sheath resin of the surge absorber may generate smoke or ignite due to current flow. To prevent such a case, place an earth leakage breaker in a location closer to the power supply than the surge absorber. When not using an earth leakage breaker, use a current fuse and temperature fuse in series with each other.

* See Table 1 in the "Circuit design and circuit board design" section.

- ② When the surge absorber is placed between a live part and a metal case, it may cause electric shock if the surge absorber short-circuits. To avoid this, ground the metal case or shield it to prevent direct contact with the metal case.

■ In case the surge absorber should short-circuit and generate smoke or ignite, immediately cut off current flow to the surge absorber.

■ Rated voltage for UL certification, etc.

To allow the surge absorber to meet leak current requirements, etc., a maximum allowable circuit voltage and rated voltage are specified for the surge absorber.

When applying for UL certification, etc. of a device equipped with a surge absorber, ensure the working voltage of the device does not exceed the rated voltage of the surge absorber.

■ An unexpected sharp rise in the working voltage, an incoming excessive surge, etc., may cause the surge absorber to generate smoke or ignite.

In such a case, fire spreading through the device should be prevented to avoid expanded damage. To achieve this, take a multi-protection measure, such as adopting fire-resistant materials that make up the outer shell components and structural materials.

Use environments and cleaning conditions

- Do not use the surge absorber in an outdoor environment where the surge absorber is exposed to sunlight.
- Do not use the surge absorber in which direct sunlight hits the surge absorber or near a heating element where the temperature of the surge absorber would rise above its working temperature.
- Do not use the surge absorber in a place where the surge absorber is exposed to wind or rain or a highly humid place where steam is emitted or dew concentrates.
- Do not use the surge absorber in a place filled with dust or salt, in an atmosphere contaminated with a corrosive gas, etc., or in liquids such as water, oil, chemical, or organic solvents.
- Do not wash the surge absorber with a solvent (thinner, acetone, etc.) that damages the outer sheath resin.

Response to anomalies and handling conditions

Be careful not to drop the surge absorber on the floor, etc. The product is likely to suffer mechanical or electrical damage when dropped on the floor. Avoid using such a product.

Reliability

A capacitor conforming to "AEC-Q200" refers to a capacitor having passed some or all of evaluation test items defined in AEC-Q200.

To know the detailed specifications of each capacitor or specific evaluation test scores, please contact us.

We issue a delivery specification sheet for each product ordered. Please confirm the delivery specification sheet when you place an order with us.

Circuit design and circuit board design

Meet the following requirements. Not following the requirements can result in a shorter lifespan of the surge absorber or its failure.

- Choose a surge absorber whose maximum allowable circuit voltage has a margin relative to the maximum voltage range including source voltage fluctuations.
 - * See Table 1 in the "Circuit design and circuit board design" section.
- When surges are applied intermittently to the surge absorber at short intervals (when pulses of voltages are applied in a noise simulator test, etc.), make sure that the surge power does not exceed the maximum average pulse power of the surge absorber.
- The product numbers of recommended surge absorbers to choose are shown in Table 1.

(1) The case of placing the surge absorber between lines

When the source voltage is expected to rise temporarily due to unbalanced single-wire loads in a three-phase three-wire connection configuration, a short circuit between a voltage line and a neutral line, loss of the neutral line, or resonance of a capacitive load caused by switching on/off, use a surge absorber (varistor) indicated by "*" in Table 1.

(2) The case of placing the surge absorber between a line and the ground

Line-to-ground voltage may rise with a single-wire ground fault, etc. Use a recommended surge absorber in Table 1 that is different from the surge absorber placed between lines. When the device is subjected to an insulation resistance test (500 V DC), use a D-type surge absorber indicated by "*" in Table 1.

According to "Electrical Appliance Technical Standards" based on the Electrical Appliance and Material Safety Act, when using a varistor voltage which would fail the insulation performance test, the surge absorber may be removed from the device when being subjected to the test, depending on circuit test conditions.

* See attached table 4, appendix 4, "Electrical Appliance Technical Standards" based on the Electrical Appliance and Material Safety Act.

When conducting a withstand voltage test (1000 V AC or 1200 V AC) of the device, use the recommended D type / V series surge absorber indicated by "*" in Table 1.

■ Current fuse

- (1) Select a surge absorber and the rated current for a current fuse to be used in a manner shown in the following table. Confirm that no secondary accident arises when the surge absorber in an actual circuit breaks. Selected rated currents of current fuses shown in the following table are exemplary one and may vary depending on circuit conditions used. Confirm the rated current by a test, etc., before using the current fuse.

<Rated currents of current fuses for the D-type / V series surge absorber>

Standard product number	ERZV05D□□□	ERZV07D□□□	ERZV09D□□□	ERZV10D□□□	ERZV14D□□□	ERZV20D□□□
Rating current	3 A max.	5 A max.	7 A max.	7 A max.	10 A max.	10 A max.

* Use the rated voltage of the current fuse that corresponds to the circuit voltage of a circuit including the current fuse.

<Rated current of a current fuse for the SMD-type / VF series surge absorber>

Standard product number	ERZVF□M□□□
Rating current	5 A max.

* Use the rated voltage of the current fuse that corresponds to the circuit voltage of a circuit including the current fuse.

* For the HF series surge absorber, select the rated current of the fuse after confirming the way the fuse handles a load dump surge and the protective coordination action it makes when the surge absorber is destroyed.

- (2) Recommended parts where fuses are connected are shown in Table 1. When a load current to a protected device is so large as to exceed the rated current of the fuse, however, connect the fuse in a location shown in the following diagram.

■ Temperature fuse

When connecting the surge absorber to a temperature fuse, choose a connection method and a temperature fuse that allow fine thermal coupling between the surge absorber and the temperature fuse.

Processing conditions

- Do not apply vibration, impact (drop impact, etc.), or pressure strong enough to crack the outer sheath resin or absorber body of the surge absorber.
- When coating the surge absorber with a resin or embedding it in a resin mold, avoid using a resin that degrades the surge absorber.
- Do not bend or apply a force to the lead of a D-type surge absorber close to the outer sheath resin.

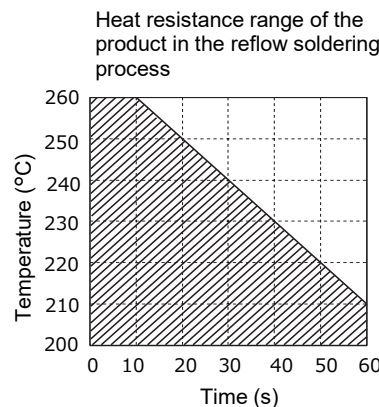

Mounting and storage conditions

- When soldering the surge absorber, follow recommended soldering conditions shown in the following table so that solder or the insulation material making up the surge absorber is not melted.
- When making holes for mounting the surge absorber on the board, check the dimensions of the holes on the board, referencing the central point of the interval between the leads.
Because the overall dimensional tolerance is large, forming the holes with high precision requires careful processing.

	Soldering method	Recommended conditions	Mater to note
D-type	Flow soldering (solder bath immersion method)	260 °C, 10 seconds or less	The D-type surge absorber should not be soldered by reflow soldering.
SMD-type	Flow soldering (solder bath immersion method)	260 °C, 10 seconds or less	A high component mounting density may lead to poor solderability. In such a case, consider vent hole formation.
	Reflow soldering (controlled atmosphere heating method)	Refer to the recommended soldering temperature profile.	When a land is excessively larger than the terminal surface of a component, the component may shift position when solder is melted.

- Note 1: Soldering the surge absorber under soldering conditions different from the recommended soldering conditions requires extra checking to ensure it won't cause any problems.
Additional soldering is allowed only once. It must be done within 5 seconds, with the soldering iron temperature kept at 400 °C or lower.
- Note 2: A temperature profile may include a large error, depending on the measurement method used.
Be careful in such cases.
- Note 3: Board temperatures vary depending on the sizes of boards and mounting densities. Confirm the temperature for each type of board.

<Recommended soldering temperature profile>

Preheating part	Normal temperature to 130 °C	120 seconds or less
Soldering part	260 °C or less	10 seconds or less
Cooling part	Gradual cooling (cooling under the normal temperature)	

Temperature-rising part I	Normal temperature to preheating temperature	30 to 60 seconds
Preheating part	150 °C to 180 °C	60 to 120 seconds
Temperature-rising part II	Preheating temperature to 200 °C	2 to 6 °C per second
Main heating part	Refer to the heat resistance range of the product in the reflow soldering process.	
Cooling part	200 °C to 100 °C	1 to 4 °C per second

* Do not perform reflow soldering more than two times.

- Mounting the surge absorber (SMD-type)
When mounting the surge absorber on the board, make sure that no excessive impact or load, such as pressure from a suction nozzle for mounting the absorber, positional shift, or mechanical impact/stress caused by a positioning of the absorber, is applied to the surge absorber. There are cases where the surge absorber shifts from its intended position when mounted on the board. In such cases, consider a method of bonding the board and the outer sheath resin together.
- Do not keep the product in a high-temperature or high-humidity condition. Keep the surge absorber in a room with a temperature of 40 °C or lower and a relative humidity of 75% or lower and use the surge absorber within two years of storage. Check the solderability of a surge absorber stored for a long period (two years or more) before using the surge absorber.
- Keep the surge absorber in a place where no corrosive gas atmosphere (hydrogen sulfide, sulfurous acid, chlorine, ammonia, etc.) is present.
- Keep the surge absorber in a place where the surge absorber is protected from direct sunlight, dew concentration, etc.
