## HIN232A

### High Speed +5V Powered RS-232 Transmitters/Receivers

FN4316  
Rev 1.00  
March 13, 2006

The HIN232A high-speed RS-232 transmitter/receiver interface circuit meets all EIA high-speed RS-232E and V.28 specifications, and is particularly suited for those applications where  $\pm 12V$  is not available. They require a single +5V power supply and feature onboard charge pump voltage converters which generate +10V and -10V supplies from the 5V supply.

The drivers feature true TTL/CMOS input compatibility, slew rate-limited output, and  $300\Omega$  power-off source impedance. The receivers can handle up to  $\pm 30V$  input, and have a  $3k\Omega$  to  $7k\Omega$  input impedance. The receivers also feature hysteresis to greatly improve noise rejection.

### Ordering Information

PART NO.	PART MARKING	TEMP. RANGE (°C)	PACKAGE	PKG. DWG. #
HIN232ACB	232ACB	0 to 70	16 Ld SOIC	M16.3
HIN232ACB-T	232ACB	0 to 70	16 Ld SOIC Tape and Reel	M16.3
HIN232ACBZ (See Note)	232ACBZ	0 to 70	16 Ld SOIC (Pb-free)	M16.3
HIN232ACBZ-T (See Note)	232ACBZ	0 to 70	16 Ld SOIC Tape and Reel (Pb-free)	M16.3
HIN232ACBN	232ACBN	0 to 70	16 Ld SOIC (N)	M16.15
HIN232ACBN-T	232ACBN	0 to 70	16 Ld SOIC (N) Tape and Reel	M16.15
HIN232ACBNZ (See Note)	232ACBNZ	0 to 70	16 Ld SOIC (N) (Pb-free)	M16.15
HIN232ACBNZ-T (See Note)	232ACBNZ	0 to 70	16 Ld SOIC (N) Tape and Reel (Pb-free)	M16.15
HIN232ACP	HIN232ACP	0 to 70	16 Ld PDIP	E16.3
HIN232ACPZ (See Note)	232ACPZ	0 to 70	16 Ld PDIP* (Pb-free)	E16.3

\*Pb-free PDIPs can be used for through hole wave solder processing only. They are not intended for use in Reflow solder processing applications.

NOTE: Intersil Pb-free plus anneal products employ special Pb-free material sets; molding compounds/die attach materials and 100% matte tin plate termination finish, which are RoHS compliant and compatible with both SnPb and Pb-free soldering operations. Intersil Pb-free products are MSL classified at Pb-free peak reflow temperatures that meet or exceed the Pb-free requirements of IPC/JEDEC J STD-020.

### Selection Table

PART NUMBER	POWER SUPPLY VOLTAGE	NUMBER OF RS-232 DRIVERS	NUMBER OF RS-232 RECEIVERS	NUMBER OF 0.1 $\mu$ F EXTERNAL CAPACITORS	LOW POWER SHUTDOWN/TTL THREE-STATE	NUMBER OF RECEIVERS ACTIVE IN SHUTDOWN
HIN232A	+5V	2	2	4 Capacitors	No/No	0

### Features

- Meets All RS-232E and V.28 Specifications
- Requires Only 0.1 $\mu$ F or Greater External Capacitors
- High Data Rate. . . . . 230kbit/s
- Requires Only Single +5V Power Supply
- Onboard Voltage Doubler/Inverter
- Low Power Consumption (Typ) . . . . . 5mA
- Multiple Drivers
  - $\pm 10V$  Output Swing for +5V Input
  - $300\Omega$  Power-Off Source Impedance
  - Output Current Limiting
  - TTL/CMOS Compatible
- Multiple Receivers
  - $\pm 30V$  Input Voltage Range
  - $3k\Omega$  to  $7k\Omega$  Input Impedance
  - 0.5V Hysteresis to Improve Noise Rejection
- Pb-Free Plus Anneal Available (RoHS Compliant)

### Applications

- Any System Requiring High-Speed RS-232 Communication Ports
  - Computer - Portable, Mainframe, Laptop
  - Peripheral - Printers and Terminals
  - Instrumentation, UPS
  - Modems

**Pinout**

**Pin Descriptions**

PIN	FUNCTION
V <sub>CC</sub>	Power Supply Input 5V ±10%.
V+	Internally generated positive supply (+10V nominal).
V-	Internally generated negative supply (-10V nominal).
GND	Ground Lead. Connect to 0V.
C1+	External capacitor (+ terminal) is connected to this lead.
C1-	External capacitor (- terminal) is connected to this lead.
C2+	External capacitor (+ terminal) is connected to this lead.
C2-	External capacitor (- terminal) is connected to this lead.
T <sub>IN</sub>	Transmitter Inputs. These leads accept TTL/CMOS levels. An internal 400kΩ pull-up resistor to V <sub>CC</sub> is connected to each lead.
T <sub>OUT</sub>	Transmitter Outputs. These are RS-232 levels (nominally ±10V).
R <sub>IN</sub>	Receiver Inputs. These inputs accept RS-232 input levels. An internal 5kΩ pull-down resistor to GND is connected to each input.
R <sub>OUT</sub>	Receiver Outputs. These are TTL/CMOS levels.

**Test Circuits (HIN232A)**

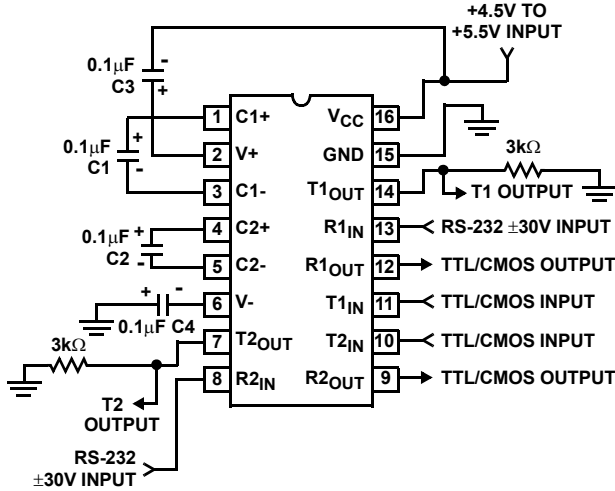

FIGURE 1. GENERAL TEST CIRCUIT

FIGURE 2. POWER-OFF SOURCE RESISTANCE CONFIGURATION

FIGURE 3. CHARGE PUMP

**Detailed Description**

The HIN232A is a high-speed RS-232 transmitter/receiver that is powered by a single +5V power supply, features low power consumption, and meets all EIA RS232C and V.28 specifications. The circuit is divided into three sections: the charge pump, transmitter, and receiver.

**Charge Pump**

An equivalent circuit of the charge pump is illustrated in Figure 3. The charge pump contains two sections: The voltage doubler and the voltage inverter. Each section is driven by a two phase, internally generated clock to generate +10V and -10V. The nominal clock frequency is 125kHz. During phase one of the clock, capacitor C1 is charged to V<sub>CC</sub>. During phase two, the voltage on C1 is added to V<sub>CC</sub>, producing a signal across C3 equal to twice V<sub>CC</sub>. During phase two, C2 is also charged to 2V<sub>CC</sub>, and then during phase one, it is inverted with respect to ground to produce a signal across C4 equal to -2V<sub>CC</sub>. The charge pump accepts input voltages up to 5.5V. The output impedance of the voltage doubler section

(V+) is approximately 200Ω, and the output impedance of the voltage inverter section (V-) is approximately 450Ω. A typical application uses 0.1μF capacitors for C1-C4, however, the value is not critical. Increasing the values of C1 and C2 will lower the output impedance of the voltage doubler and inverter, increasing the values of the reservoir capacitors, C3 and C4, lowers the ripple on the V+ and V- supplies.

**Transmitters**

The transmitters are TTL/CMOS compatible inverters which translate the inputs to RS-232 outputs. The input logic threshold is about 26% of V<sub>CC</sub>, or 1.3V for V<sub>CC</sub> = 5V. A logic 1 at the input results in a voltage of between -5V and V- at the output, and a logic 0 results in a voltage between +5V and (V+ -0.6V). Each transmitter input has an internal 400kΩ pullup resistor so any unused input can be left unconnected and its output remains in its low state. The output voltage swing meets the RS-232C specifications of ±5V minimum with the worst case conditions of: all transmitters driving 3kΩ minimum load impedance, V<sub>CC</sub> = 4.5V, and maximum allowable operating temperature. The

transmitters have an internally limited output slew rate which is less than  $30V/\mu s$ . The outputs are short circuit protected and can be shorted to ground indefinitely. The powered down output impedance is a minimum of  $300\Omega$  with  $\pm 2V$  applied to the outputs and  $V_{CC} = 0V$ .

**Receivers**

The receiver inputs accept up to  $\pm 30V$  while presenting the required  $3k\Omega$  to  $7k\Omega$  input impedance even if the power is off ( $V_{CC} = 0V$ ). The receivers have a typical input threshold of  $1.3V$  which is within the  $\pm 3V$  limits, known as the transition region, of the RS-232 specifications. The receiver output is  $0V$  to  $V_{CC}$ . The output will be low whenever the input is greater than  $2.4V$  and high whenever the input is floating or driven between  $+0.8V$  and  $-30V$ . The receivers feature  $0.5V$  hysteresis (except during shutdown) to improve noise rejection.

FIGURE 5. RECEIVER

$$\text{AVERAGE PROPAGATION DELAY} = \frac{t_{PHL} + t_{PLH}}{2}$$

FIGURE 6. PROPAGATION DELAY DEFINITION

**Application Information**

The HIN232A may be used for all RS-232 data terminal and communication links. It is particularly useful in applications where  $\pm 12V$  power supplies are not available for conventional RS-232 interface circuits. The applications presented represent typical interface configurations.

A simple duplex RS-232 port with CTS/RTS handshaking is illustrated in Figure 7. Fixed output signals such as DTR (data terminal ready) and DSRs (data signaling rate select) is generated by driving them through a  $5k\Omega$  resistor connected to  $V+$ .

In applications requiring four RS-232 inputs and outputs (Figure 8), note that each circuit requires two charge pump capacitors ( $C1$  and  $C2$ ) but can share common reservoir capacitors ( $C3$  and  $C4$ ). The benefit of sharing common reservoir capacitors is the elimination of two capacitors and the reduction of the charge pump source impedance which effectively increases the output swing of the transmitters.

**NOTES:**

1. Controlling Dimensions: INCH. In case of conflict between English and Metric dimensions, the inch dimensions control.
2. Dimensioning and tolerancing per ANSI Y14.5M-1982.
3. Symbols are defined in the "MO Series Symbol List" in Section 2.2 of Publication No. 95.
4. Dimensions A, A1 and L are measured with the package seated in JEDEC seating plane gauge GS-3.
5. D, D1, and E1 dimensions do not include mold flash or protrusions. Mold flash or protrusions shall not exceed 0.010 inch (0.25mm).
6. E and  $e_A$  are measured with the leads constrained to be perpendicular to datum [-C-].
7.  $e_B$  and  $e_C$  are measured at the lead tips with the leads unconstrained.  $e_C$  must be zero or greater.
8. B1 maximum dimensions do not include dambar protrusions. Dambar protrusions shall not exceed 0.010 inch (0.25mm).
9. N is the maximum number of terminal positions.
10. Corner leads (1, N, N/2 and N/2 + 1) for E8.3, E16.3, E18.3, E28.3, E42.6 will have a B1 dimension of 0.030 - 0.045 inch (0.76 - 1.14mm).
