ICS9169M-01**

Frequency Generator and Integrated Buffers for Intel Pentium and Pentium Pro™ μ P's

General Description

The ICS9169-01 generates all clocks required for high speed RISC or CISC microprocessor systems such as 486, Pentium/Pentium Pro™, PowerPC™, etc. Four different reference frequency multiplying factors are externally selectable with smooth frequency transitions. These multiplying factors can be customized for specific applications. A test mode is provided to drive all clocks directly.

High drive BCLK outputs typically provide greater than 1V/ns slew rate into 30pF loads. PCLK outputs typically provide better than 1V/ns slew rate into 20pF loads while maintaining 50±5% duty cycle. The REF clock outputs typically provide better than 0.5V/ns slew rates.

Features

- Generates four processor, six bus, three 14.318 MHz and one 48 MHz clock for ISA bus, audio, super I/O and bus bridge devices
- Supports the Intel MARS chip set
- Synchronous clocks skew matched to 250ps window on PCLKs and 500ps window on BCLKs
- Test clock mode eases system design
- Selectable multiplying ratios
- Custom configurations available
- Output frequency ranges to 100 MHz (depending on option)
- 3.0V - 5.5 V supply range
- 28-pin SOIC and 28-pin SSOP (209-mil) packages

Applications

- Ideal for high-speed RISC or CISC systems such as 486, Pentium, Pentium Pro, PowerPC, etc.

General Layout Precautions:

- 1) Use a ground plane on the top layer of the PCB in all areas not used by traces.
- 2) Make all power traces and vias as wide as possible to lower inductance.

Notes:

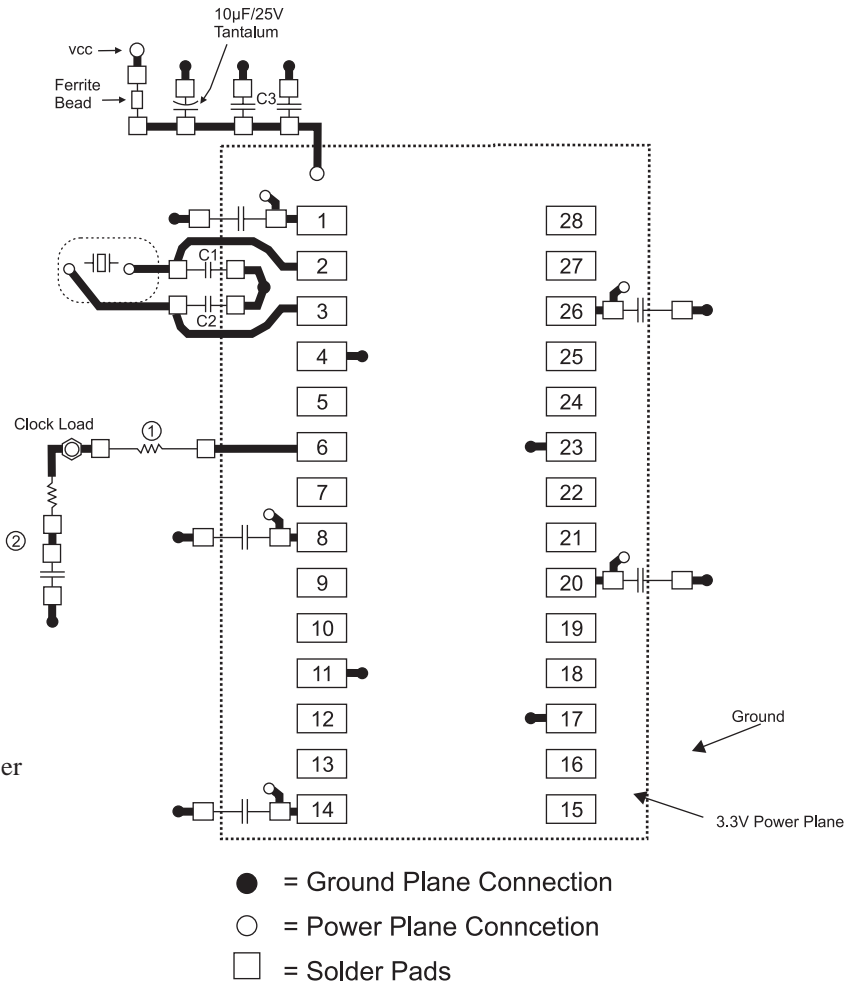

- 1) All clock outputs should have series terminating resistor. Not shown in all places to improve readability of diagram.
- 2) 47 ohm / 56pf RC termination should be used at 50MHz and higher clock loads.
- 3) Optional crystal load capacitors are recommended.

Capacitor Values:

C1, C2 : Crystal load values determined by user

C3 : 100pF ceramic

All unmarked capacitors are 0.01μF ceramic
