

## 1 Description

Ideally suited to the needs of Automated Test Equipment, Instrumentation and Telecommunications requirements, Coto's 9814/H & 9852 Series is a miniature Surface Mount Reed Relay that combines small size with exceptional RF performance. The 9814/H extends life at ATE loads 3X or more utilizing Coto's proprietary switch technology. The external Magnetic Shield reduces interaction between parts in high density boards. The 9852 adds Form C capability. Small size plus added features allow for high density packing, and make these relays ideal for designs such as high speed, high pin count VLSI testers where high speed, small size and high performance are all needed.

## Device Packages

## 2 Features

- ▶ High Power - 10 Watt version available on model 9814H
- ▶ Available in Gull wing and "J" bend lead configurations
- ▶ Coaxial shield for 50 Ω
- ▶ 6.5 GHz bandwidth for RF and Pulse switching (fast rise time pulses)
- ▶ High insulation resistance -  $10^{12} \Omega$  (Form A)
- ▶ Gold plated terminals
- ▶ External Magnetic Shield
- ▶ Tape and Reel packaging available
- ▶ High reliability, hermetically sealed contacts for long life
- ▶ High speed switching compared to electromechanical relays
- ▶ Molded thermoset body on integral lead frame design
- ▶ RoHS Compliant

## 3 Applications

- ▶ Automated Test Equipment (ATE)
- ▶ Instrumentation
- ▶ Telecommunications

## 4 Dimensions

**General Notes:**

1. Consult factory for life expectancy at other switching loads. Resistance > 2.0 ohms defines end of life.
2. Part number 9814-XX-XXH is the high power version of our traditional 9814 series.

**Environmental Ratings:**

Storage Temp:-35°C to + 100°C; Operating Temp: -20°C to +85°C  
 Vibration: 20 G's to 2000 Hz; Shock: 50 G's

All electrical parameters measured at 25°C unless otherwise specified.

## 8 Relay Processing Notes

### 8.1 Soldering

Coto Technology uses a higher temperature solder for all internal connections. We recommend that the max relay temperature during the solder reflow process does not exceed 260°C for 10 seconds maximum. Temperature and time more than the recommended levels may result in damage to the relay. Recommended solder profile as below.

### 8.2 Cleaning

9814/H & 9852 are designed and manufactured to provide an adequate seal from external conditions. However, caution must be taken during the cleaning process not to expose the relays to conditions that will allow moisture to permeate into the package. Caution should be taken with dwell time between reflow and cleaning, high pressure spraying, and time in cleaning solvent/aqueous solutions, as these cleaning process parameters can contribute to moisture permeation. Board level bake out may be required after wash to remove moisture that has been introduced during cleaning operations.

### 8.3 Relay Storage

Relay parametric specifications are specified at 25°C and 40% RH. Reduced relay performance may result if storage or use environments significantly exceed these conditions. If high insulation resistance is required, Coto Technology recommends that relay storage, processing, and use environments are adequate to achieve the desired results. Relays should be stored in similar environmental conditions as other high-reliability active and passive electronic components. Proper storage of relays is also important to maintain solderability over an extended period of time.

### 8.4 Handling

Relays should be handled with care. Dropping or mishandling relays may result in damage that can contribute to a direct failure or, even worse, a latent field failure. If relays are dropped, Coto Technology recommends that they should be discarded.

Coto Technology does not recommend use of ultrasonic activated equipment with relays. The use of ultrasonic equipment may change the characteristics of the relay and can contribute to failure.
