### PRODUCT OVERVIEW

PGA-122-75+ (RoHS compliant) is an advanced wideband amplifier fabricated using E-pHEMT technology and offers extremely high dynamic range over a broad frequency range with low noise figure and flat gain. Lead finish is SnAgNi. It has repeatable performance from lot to lot and is enclosed in a SOT-89 package for very good thermal performance.

### KEY FEATURES

Feature	Advantages
Broad Band: 0.04 to 1.5 GHz	0.04 to 1.5 GHz bandwidth covers primary CATV applications such as DOCSIS 3.1
Application Circuit for 5 to 2000 MHz Available	Supports bandwidth requirements for upstream CATV applications. See application note AN-60-087. Recommend Evaluation Board, TB-885+
High IP3 Versus DC Power Consumption: +43 dBm Typical at 0.5 GHz	The PGA-122-75+ matches industry leading IP3 performance relative to device size and power consumption. The combination of the design and E-pHEMT structure provides enhanced linearity over a broad frequency range as evidence in the IP3 being typically 15-20 dB above the P1dB point. This feature makes this amplifier ideal for use in CATV applications.
High IP2, +54 dBm at 0.5 GHz	Suppresses second order product on wideband applications such as CATV
Low Noise Figure, 2.9 dB at 0.5 GHz	Low noise figure performance in combination with the high output IP3 results in high dynamic range.
Excellent CSO/CTB* CSO, -59 dBc CTB, -80 dBc Measured at channel 78	Competitive performance at lower current and supply voltage.

\* 78 channels flat, 30 dBmV/channel at output, 6 MHz channel spacing

### SIMPLIFIED SCHEMATIC AND PIN DESCRIPTION

Function	Pin Number	Description
RF-IN	1	RF input pin. This pin requires the use of an external DC blocking capacitor chosen for the frequency of operation.
RF-OUT and DC-IN	3	RF output and bias pin. DC voltage is present on this pin; therefore a DC blocking capacitor is necessary for proper operation. An RF choke is needed to feed DC bias without loss of RF signal due to the bias connection, as shown in "Recommended Application Circuit", Fig. 2.
GND	2,4	Connections to ground. Use via holes as shown in "Suggested Layout for PCB Design" to reduce ground path inductance for best performance.
