

Differential Low Pass Filter

DLFCG-540+

100Ω DC to 540 MHz

The Big Deal

- Differential operation
- Fast roll off
- Small size, 0805
- Very wide stopband, up to 8360 MHz without re-entry

CASE STYLE: GE0805C-1

Product Overview

Mini-Circuits' DLFCG-540+ is an LTCC differential low pass filter with a passband from DC to 540 MHz. This model is ideal for applications requiring filtering of balanced signals on dual 50Ω lines such as DACs/ ADCs, systems with very low noise requirements and more. The filter provides low insertion loss in the passband, fast roll off in the transition, and a very wide stopband without re-entry up to 8360 MHz, making it suitable for use in wideband systems with many harmonics and spurious products. The unit comes housed in a tiny, rugged 0805 ceramic package, with wraparound terminations for excellent solderability.

Key Features

Feature	Advantages
Differential filter	Allows filtering of balanced signals in a single, tiny component. Eliminates the need for binning and matching of separate discrete components.
Tiny size (0.08 x 0.05 x 0.03")	Saves space in dense circuit board layouts and minimizes the effects of parasitics.
Fast roll off	Provides sharp rejection at frequencies close to the passband.
Ultra-wide stopband	Provides excellent rejection over more than a decade of bandwidth, ideal for blocking harmonics in wideband test and measurement or communications systems.
Wrap-around terminations	Provides excellent solderability and easy visual inspection.
Wide operating temperature range, -55 to +100°C	Enables reliable performance in extreme environments.
