

Product Overview

Qorvo’s QPA2309 is a packaged, high-power C-band amplifier fabricated on Qorvo’s production 0.25 μm GaN on SiC process (QGaN25HV). Covering 5.0–6.0 GHz, the QPA2309 provides 50 dBm of saturated output power and 22 dB of large-signal gain while achieving 47 % power-added efficiency.

The QPA2309 is packaged in a 7 mm x 7 mm 48-pin plastic overmolded package. It can support a variety of operating conditions to best support system requirements. With good thermal properties, it can support a range of bias voltages.

The QPA2309 MMIC has DC blocking capacitors on both RF ports, which are matched to 50 ohms. The QPA2309 is ideal for military radar systems.

Lead-free and RoHS compliant.
