

# TUNS-series

## ■ Feature

AC-DC Power Module Type Converter  
 Harmonic attenuator (Complies with IEC61000-3-2 class A)  
 Thin and small size  
 Built-in overcurrent, overvoltage and thermal protection circuits  
 Mounting hole (M3 tapped)

<TUNS50F/100F/300F/500F/700F>  
 Universal input 85 - 264VAC  
 Peak current (TUNS500F)

<TUNS1200F>  
 Wide input 85 - 305VAC  
 For medical electric equipment  
 Constant current regulation  
 Output voltage can be varied to near 0V  
 Parallel operation possible

## ■ CE marking

Low voltage directive  
 RoHS Directive

## ■ UKCA marking

Electrical Equipment Safety Regulations  
 RoHS Regulations

## ■ Safety Approval

UL60950-1, C-UL, EN62368-1  
 (TUNS50F/100F/300F/500F/700F)  
 UL62368-1, C-UL, EN62368-1 (TUNS1200F)  
 ANSI/AAMI ES60601-1, EN60601-1 3rd (TUNS1200F)

## ■ 5-year warranty

## ■ Optional parts

Heat sink

# TUNS50F

TUN S 50 F 05 -□

① ② ③ ④ ⑤ ⑥

\*Providing heat sink as option

- ① Series name
- ② Single output
- ③ Output wattage
- ④ Universal Input
- ⑤ Output voltage
- ⑥ Optional
- T : with Mounting hole (φ 3.4 thru)

\*Avoid short circuit between +BC and -BC. It may cause the failure of inside components.  
 \*Keep TRM open, if output voltage adjustment is not necessary.

MODEL	TUNS50F05	TUNS50F12	TUNS50F24
MAX OUTPUT WATTAGE[W]	50.0	50.4	50.4
DC OUTPUT	5V 10A	12V 4.2A	24V 2.1A

## SPECIFICATIONS

	MODEL	TUNS50F05	TUNS50F12	TUNS50F24

⑲	PG	Power good output
-	FG	Mounting hole (FG)

Implementation • Mounting Method

### Mounting method

- Use with the conduction cooling (e.g. heat dissipation from the aluminum base plate to the attached heat sink).
  - Use a heat sink that larger than the power supply and has a large thickness so that the aluminum base plate can be cooled uniformly.
  - Unless the baseplate and the heat sink are placed in close contact with each other, contact thermal resistance will increase until heat dissipation becomes insufficient. Always use either thermal grease or a thermal sheet.
- If processing thermal grease, apply it thinly and evenly.
- Also, when processing the thermal sheet, make a hole according to the position of the screw.
- If the four corners are cut as shown in the figure below, stress may be applied to the edges of the base plate during fixing, which may damage the built-in parts, so avoid such processing.

Image of using thermal sheet and precautions when processing

- The unit can be mounted in any direction. When two or more power supplies are used side by side, position them with proper intervals to allow enough air ventilation. Aluminum base plate temperature of each power supply should not exceed the temperature range shown in “derating”.
- Avoid placing the AC input line pattern layout underneath the unit. It will increase the line conducted noise. Make sure to leave an ample distance between the line pattern layout and the unit. Also avoid placing the DC output line pattern underneath the unit because it may increase the output noise. Lay out the pattern away from the unit.
- Avoid placing the signal line pattern layout underneath the unit because the power supply might become unstable. Lay out the pattern away from the unit.
- High-frequency noise radiates directly from the unit to the atmosphere. Therefore, design the shield pattern on the printed circuit board and connect it to FG or -BC. The shield pattern prevents noise radiation.
- When a heat sink cannot be fixed on the base plate side, order the power module with “-T” option. A heat sink can be mounted by affixing a M3 tap on the heat sink. Please make sure a mounting hole will be connected to a grounding capacitor CY.

Mounting hole	
Standard	M3 tapped
Optional : -T	φ 3.4 thru

### Stress onto the pins

- When too much stress is applied to the pins may damage internal connections. Avoid applying stress in excess of that shown in right figure.
- The pins are soldered onto the internal PCB. Therefore, Do not bend or pull the leads with excessive force.
- Mounting hole diameter of PCB should be 3.5mm to reduce the stress to the pins.
- Fix the unit on PCB (fixing fittings) by screws to reduce the stress to the pins. Be sure to mount the unit first, then solder the unit.

### Soldering temperature

- Flow soldering : 260°C for up to 15 seconds.
- Soldering iron (26W) : 450°C for up to 5 seconds.

Derating

Input voltage derating curve

● TUNS50F/100F

● TUNS700F/1200F

\*TUNS1200F12 has no input voltage derating.

● TUNS300F/500F

\*TUNS300F/500F has no input voltage derating.

Output voltage derating curve

■ Use the power modules with conduction cooling (e.g. heat dissipation from the aluminum base plate to the attached heat sink).

Below shows the derating curves with respect to the aluminum base plate temperature. Note that operation within the hatched areas will cause a significant level of ripple and ripple noise.

■ Please measure the temperature on the aluminum base plate edge side when you cannot measure the temperature of the center part of the aluminum base plate. In this case, please take 5deg temperature margin from the derating characteristics shown in below. Please reduce the temperature fluctuation range as much as possible when the up and down of the temperature are frequently generated. Contact us for more information on cooling methods.
