

**THE DATASHEET OF  
ADM6346-38ARTZ-R7**

### FEATURES

- Ultralow supply current of 1  $\mu\text{A}$  maximum (ADM6326/ADM6328)
- Accurate monitoring of 2.5 V, 3 V, 3.3 V, and 5 V rails
- Reset thresholds available in increments from 2.2 V to 4.63 V
- Glitch immunity from negative-going  $V_{CC}$  transients
- 2 reset output options
  - Push-pull  $\overline{\text{RESET}}$  (ADM6326/ADM6346)
  - Open-drain  $\overline{\text{RESET}}$  (ADM6328/ADM6348)
- Minimum reset timeout of 100 ms
- Operating temperature range of  $-40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$
- 3-lead SOT-23 package

### APPLICATIONS

- Telecommunications
- Microprocessor systems
- Desktop and notebook computers
- Portable equipment

### GENERAL DESCRIPTION

The ADM6326/ADM6328/ADM6346/ADM6348 devices provide low cost solutions for protecting sensitive circuitry, such as microprocessor and telecommunications circuitry.

With built-in glitch immunity, ultralow supply currents, and 24 reset threshold voltage options, the ADM6326/ADM6328/ADM6346/ADM6348 not only ensure that systems are immune to fast transients on  $V_{CC}$ , but also that the devices are suitable for monitoring a variety of supply voltages in low power, portable equipment.

These devices provide a reset output during power-up, power-down, and brownout conditions. On power-up, an internal timer holds  $\overline{\text{RESET}}$  asserted for at least 100 ms. This holds the

### FUNCTIONAL BLOCK DIAGRAMS

Figure 1.

Figure 2.

microprocessor in a reset state until conditions have stabilized. The reset output remains operational with  $V_{CC}$  as low as 1 V.

The ADM6326 and ADM6346 have an active low push-pull reset output. The ADM6328 and ADM6348 have an active low open-drain reset output, which requires an external pull-up resistor. The ADM6326 and ADM6328 offer a choice of ten reset thresholds in increments between 2.2 V and 3.08 V, whereas the ADM6346 and ADM6348 offer a choice of 14 reset thresholds between 3.3 V and 4.63 V. Not all options are released for sale as standard models. See the Ordering Guide for details.

These devices are available in a 3-lead SOT-23 package and operate over the extended temperature range of  $-40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$ .

## SPECIFICATIONS

$T_A = -40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$ , unless otherwise noted. Typical values are at  $T_A = 25^{\circ}\text{C}$  and  $V_{CC} = 3\text{ V}$ . Overtemperature limits are guaranteed by design.

**Table 1.**

Parameter	Min	Typ	Max	Unit	Test Conditions/Comments
OPERATING VOLTAGE RANGE, $V_{CC}$	1.0		5.5	V	
INPUT CURRENT, $I_{CC}$		0.5	1.0	$\mu\text{A}$	ADM6326/ADM6328 only, $V_{CC} = 3.0\text{ V}$ for $V_{TH} \leq 2.93\text{ V}$ , $V_{CC} = 3.2\text{ V}$ for $V_{TH} > 2.93\text{ V}$ , no load
		1.0	1.75	$\mu\text{A}$	$V_{CC} = 5.5\text{ V}$ , no load
RESET THRESHOLD					
Threshold Voltage, $V_{TH}$ (See Table 2)	$V_{TH} - 2.5\%$	$V_{TH}$	$V_{TH} + 2.5\%$	V	$T_A = 25^{\circ}\text{C}$
	$V_{TH} - 1.5\%$	$V_{TH}$	$V_{TH} + 1.5\%$	V	
Temperature Coefficient		40		ppm/ $^{\circ}\text{C}$	
Hysteresis				mV	
		6.3		mV	
		9.5		mV	
TIMING CHARACTERISTICS

<sup>1</sup> Not all device options are released for sale as standard models. See the Ordering Guide for full details.

## ABSOLUTE MAXIMUM RATINGS

Table 3.

Parameter	Rating
Supply Voltage, $V_{CC}$	-0.3 V to +6 V
Input Current, $I_{CC}$	20 mA
Output Voltage	
Push-Pull $\overline{RESET}$	-0.3 V to ( $V_{CC} + 0.3$ V)
Open-Drain $\overline{RESET}$	-0.3 V to +6 V
Output Current ( $\overline{RESET}$ )	20 mA
Rate of Rise of $V_{CC}$	100 V/ $\mu$ s
Temperature	
Storage	-65°C to +155°C
Operating	-40°C to +85°C
Soldering (10 sec)	300°C

Stresses at or above those listed under Absolute Maximum Ratings may cause permanent damage to the product. This is a stress rating only; functional operation of the product at these or any other conditions above those indicated in the operational section of this specification is not implied. Operation beyond the maximum operating conditions for extended periods may affect product reliability.

## THERMAL RESISTANCE

$\theta_{JA}$  is specified for the worst-case conditions, that is, a device soldered in a circuit board for surface-mount packages.

Table 4. Thermal Resistance

Package Type	$\theta_{JA}$	Unit
3-Lead SOT-23	270	°C/W

## ESD CAUTION

**ESD (electrostatic discharge) sensitive device.** Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

## PIN CONFIGURATION AND FUNCTION DESCRIPTIONS

Figure 3. ADM6326/ADM6328/ADM6346/ADM6348 Pin Configuration

Table 5. Pin Function Descriptions

Pin No.	Mnemonic	Description
1	GND	Ground Reference for All Signals; 0 V.
2	RESET	Active Low Logic Output. This pin is low when $V_{CC}$ is less than the reset threshold; it remains low for 185 ms (typical) after $V_{CC}$ becomes greater than the reset threshold.
3	$V_{CC}$	Supply Voltage Being Monitored.

TYPICAL PERFORMANCE CHARACTERISTICS

Figure 4. Supply Current vs. Temperature

Figure 6. Power-Up Reset Timeout vs. Temperature

Figure 5. Maximum Transient Duration vs. Reset Threshold Overdrive

Figure 7. Power-Down Reset Delay vs. Temperature

## THEORY OF OPERATION

The ADM6326/ADM6328/ADM6346/ADM6348 are designed to protect the integrity of a system's operation by ensuring the proper operation of the system during power-up, power-down, and brownout conditions. Ultralow supply currents make these devices particularly suitable for use in low power, portable equipment.

### RESET OUTPUT

The ADM6326 and ADM6346 have an active low, push-pull reset output, whereas the ADM6328 and ADM6348 have an active low, open-drain reset output, which requires an external pull-up resistor. The  $\overline{\text{RESET}}$  signal is guaranteed to be valid for  $V_{CC}$  down to 1 V.

When the ADM6326/ADM6328/ADM6346/ADM6348 are powered up, the  $\overline{\text{RESET}}$  output remains low for a period typically equal to the  $\overline{\text{RESET}}$  active timeout period of 185 ms. This feature allows adequate time for the system to power up correctly and for the power supply to stabilize before any devices are brought out of reset and are allowed to begin executing instructions. Initializing a system in this way provides a more reliable startup for microprocessor systems.

When the monitored voltage falls below its associated threshold ( $V_{TH}$ ),  $\overline{\text{RESET}}$  is asserted within 20  $\mu\text{s}$  (typical). Asserting  $\overline{\text{RESET}}$  this quickly means that the entire system can be reset at once before any part of the system's voltage falls below its recommended operating voltage. This system reset can avoid dangerous and/or erroneous operation of a microprocessor based system.

### INTERFACING TO OTHER DEVICES

The active low, open-drain reset output of the ADM6328 and ADM6348 makes these devices ideal for integration with devices such as microprocessors with bidirectional reset pins. Simply connect the  $\overline{\text{RESET}}$  output of the ADM6328 or ADM6348 to the  $\overline{\text{RESET}}$  input of the microprocessor using a single pull-up resistor to allow either device to initiate a system reset (see Figure 8).

Figure 8. Interfacing to a Microprocessor with a Bidirectional Reset Pin

### TRANSIENT IMMUNITY

To avoid unnecessary resets caused by fast power supply transients, the ADM6326/ADM6328/ADM6346/ADM6348 provide glitch immunity from negative-going  $V_{CC}$  transients.

Figure 5 shows the  $\overline{\text{RESET}}$  comparator overdrive (that is, the maximum magnitude of negative-going pulses with respect to the typical threshold) vs. the pulse duration without a reset.

Figure 9.  $\overline{\text{RESET}}$  Timing

<sup>1</sup> The ADM6326/ADM6328/ADM6346/ADM6348 include many device options; however, not all options are released for sale. Released options are called standard models and are listed in the Ordering Guide. For the most up to date list of standard models, check the [Single Supply Monitors IC](#) page on the Analog Devices website. Contact sales for information on nonstandard models and be aware that samples and production units have very long lead times.

<sup>2</sup> Z = RoHS Compliant Part.
