JLC1562BN**

JLC1562B

I²C Bus I/O Expander

The JLC1562B facilitates easy I²C Bus expandability. Multiple devices (up to 8 on the same I²C Bus) are easily added as each device has its own selectable 3-bit address. The JLC1562B provides an 8-bit bidirectional input/output port and 6-bit resolution Digital to Analog Converter. The voltage on pins P0–P4 is compared with a controllable threshold voltage and the results are readable through the I²C Bus.

I²C Bus interface pins SDA, SCL and A0–A2 are; Serial Data, Serial Clock and Device Address respectively. External interface pins are P0–P7 and VDAC; I/O Port and D/A output.

Features

- Low Power Dissipation
- I²C–Bus Format (2–Wire Type; SDA, SCL) Data Transfer
- 6–bit DAC
- Bus Address Selectable (3–bit)
- Address Input Pins are Pulled Up to V_{DD} with Internal Resistor
- I/O Pins are Open Drain Outputs
- 5 Comparators at Inputs
- Inputs Protected from External Bus Currents in Power Down Mode
- Pb–Free Packages are Available*

Maximum ratings are those values beyond which device damage can occur. Maximum ratings applied to the device are individual stress limit values (not normal operating conditions) and are not valid simultaneously. If these limits are exceeded, device functional operation is not implied, damage may occur and reliability may be affected.
