

# THE DATASHEET OF STEVAL-ILL062V1

## **AN-2214 TPS92310 Evaluation Module**

---

---

---

### **1 Introduction**

The TPS92310 EVM-8W evaluation module is a constant current output LED driver supporting 5W to 8W applications. The design focuses on applications that require small form factor and minimal number of external components. The actual PCB dimension of the module is only 22mm x 55mm x 19mm (L x W x H). The module can work with AC line input from 90 to 132V<sub>RMS</sub> or 180 to 264V<sub>RMS</sub> and supplying 350mA current into a single string of LEDs, typically 6-7 LEDs in series. The evaluation board is carefully designed to comply with major industrial EMC and safety requirements. The user can make use of the information provided in this document, *Dual Hot-Swap Power Controllers with Interdependent Circuit Breaker and Power-Good Reporting* ([SLVS275](#)) data sheet and application notes to design its specific end product easily.

### **2 Description**

The TPS92310 EVM-8W is developed with the TPS92310 controller IC. The TPS92310 is a single-stage AC/DC controller dedicated for LED Lighting applications. The controller uses a primary-side current sense configuration to control the LED current at secondly side. The system works in Critical Conduction Mode (CRM) with flyback topology and it employs a constant on time modulation scheme. Inherently, systems with this configuration can achieve greater than 0.90 Power Factor (PF) easily. The Power Factor (PF) and line current harmonic performances of the evaluation board are tested and reported in this document. The TPS92310 also integrated various protection features: Over-Voltage Protection (OVP), Thermal Shut Down (TSD) and cycle-by-cycle Over-Current Protection (OCP). With these features in place, the system is well protected against open and short circuit of the LEDs string. Considering with the EMI problem, the TPS92310 integrates an internal delay timer to improve it. The delay time can be programmed through an external resistor, it can ensures the controller switch ON the MOSFET only when the MOSFET's drain voltage at its lowest point. The Quasi-resonant switching operation improves the EMI and system efficiency significantly.

### **3 Typical Applications**

LED Lamps:

- A19 (E26/27, E14)
- PAR30/38
- GU10

Domestic and Office SSL solutions:

- Down Light
- LED Panel Light
- Ceiling Lamp Troffer
- T8 Tube

**Features**

- Application input voltage:  $90V_{RMS}$ - $132V_{RMS}$  or  $180V_{RMS}$ - $264V_{RMS}$
- **Primary side** Fly-back LED current regulation
- **Adaptive ON-time** control with inherent PFC
- **Critical-Conduction-Mode (CRM)** with **Zero-Current Detect (ZCD)** for valley switching
- **Quasi-resonant switching** to benefit the EMI and efficiency
- **Programmable** FET Switch-On-Delay
- **Constant ON-Time (COT)** and Peak Current Mode (PCM)
- LED current setting with external sense resistor

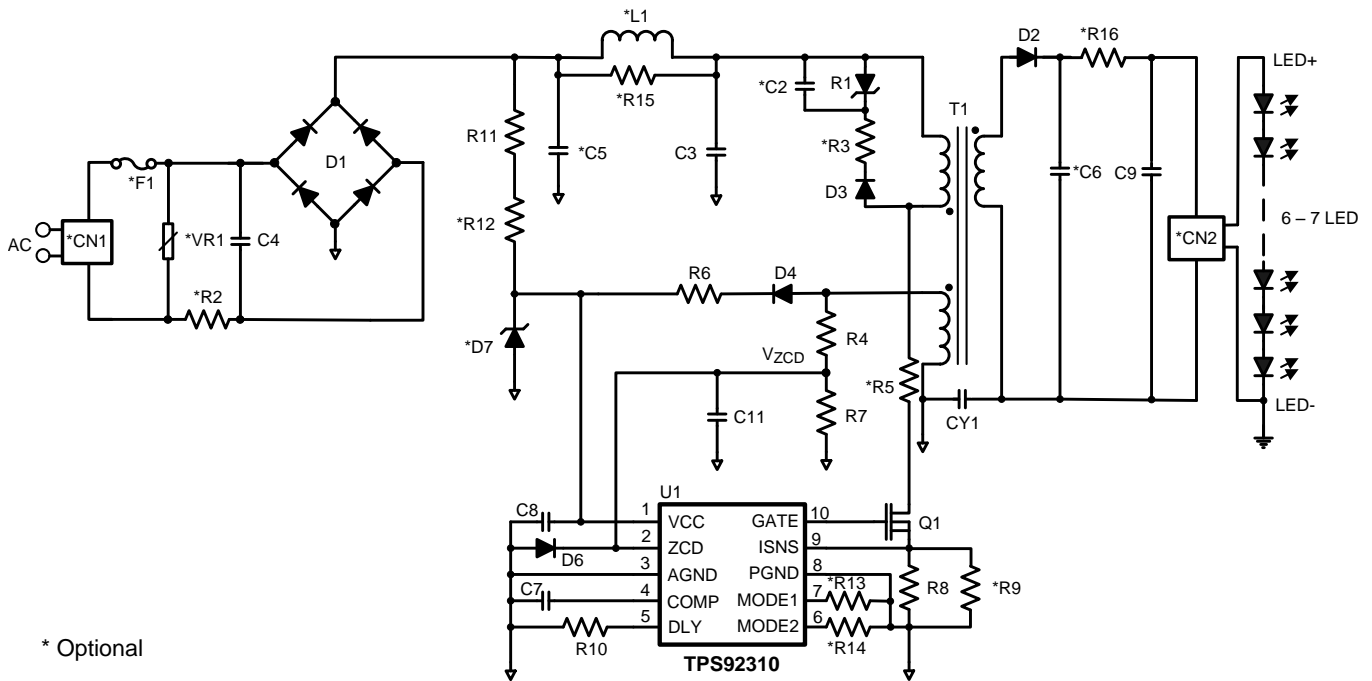

**4 Electrical Performance Specifications**
**Table 1. 230VAC Evaluation Board (TPS92310 230V EVM)**

PARAMETER	TEST CONDITIONS	Min	Typ	Max	Units
Input Characteristics					
	Voltage range	180		264	$V_{RMS}$
	Input current when VAC = $220V_{RMS}$ , $V_{LED}=20V$	-	38	-	mA
Output Characteristics					
	Output voltage, $V_{LED}$		21		V
	Output load current, $I_{LED}$	330	350	370	mA
	Output over voltage	-	26	-	V
Systems Characteristics					
	Full load efficiency ( $P_{IN} = 8W$ )	83	85	-	%
	Full load Power Factor ( $P_{IN} = 8W$ )	-	>0.9	-	

**Table 2. 120VAC Evaluation Board (TPS92310 120V EVM)**

PARAMETER	TEST CONDITIONS	Min	Typ	Max	Units
Input Characteristics					
	Voltage range	90		132	$V_{RMS}$
	Input current when VAC = $220V_{RMS}$ , $V_{LED}=20V$	-	75	-	mA
Output Characteristics					
	Output voltage, $V_{LED}$		21		V
	Output load current, $I_{LED}$	330	350	370	mA
	Output over voltage	-	26	-	V
Systems Characteristics					
	Full load efficiency ( $P_{IN} = 8W$ )	82	85	-	%
	Full load Power Factor ( $P_{IN} = 8W$ )	-	>0.9	-	

5 Schematic ( TPS92310 120V EVM / TPS92310 230V EVM )

\* Optional

Figure 1. Standard Schematic for the TPS92310 Evaluation Board

5.1 Test Equipment

**Voltage Source:** Start at  $90V_{RMS}$ - $140V_{RMS}$  or  $180V_{RMS}$ - $264V_{RMS}$ ; AC source: PCR500LA (KIKUSUI)

**Multimeter:** Agilent 34401A

**Power meter:** WT210 Digital Power Meter (YOKOGAWA)

**Output Load:** 7 LEDs in series ( LED forward voltage =3.0 V at 350 mA ) or  $V_{LED} = 21V$

**Oscilloscope:** TDS3054C (TEKTRONIX )

**Operation temperature :** 25°C

## 6 Board Connection

Figure 2. Typical Connection Block Diagram

Figure 3. TPS92310EVM\_8W

Terminal Designation	Description
AC Live	Connect 230V <sub>AC</sub> or 120V <sub>AC</sub> to the board ( TPS92310 120V EVM = 120V <sub>AC</sub> , TPS92310 230V EVM = 230V <sub>AC</sub> )
AC Neutral	
LED+	Connect to the LED + of the LED string
LED-	Connect to the LED - of the LED string

## 7 TPS92310 Evaluation Board Test Procedure

### CAUTION

High voltage levels are present on the evaluation module whenever it is energized. Proper precautions must be taken when working with the EVM. Serious injury can occur if proper safety precautions are not followed.

**Table 3. Connections**

Step	Operation	Remarks
1	Confirm the demo boards version. (120V <sub>AC</sub> TPS92310 120V EVM or 230V <sub>AC</sub> TPS92310 230V EVM)	Check the demo board.
2	Connect the AC source to AC line	AC source voltage is 230V <sub>AC</sub> TPS92310 230V EVM /120V <sub>AC</sub> TPS92310 120V EVM
3	Connect the LED light or electronic load to connector LED+ and LED-. (Figure 3)	If use electronic load, set the electronic load is 20V with CV mode. And make sure the LED + connect to electronic load + and LED- connection electronic load GND.

**Table 4. Functional AC Input Test**

Step	Operation	Remarks
4	Switch the power switch on the setup to ON position.	Please confirm the AC1 and AC2 connection are correct.
5	The LEDs lights up within 2 sec. Measure the convertor output voltage.	The LED voltage is 21V. I <sub>LED</sub> current is 350mA +/- 5% (electronic load loading value). If the V <sub>LED</sub> start up <2 sec, Power Factor >0.9 and I <sub>LED</sub> between 330mA to 370mA
6	Switch off the power source.	Don't touching any connection within 2 sec after power off.

## 8 Typical Performance Characteristics (TPS92310 230V EVM (230VAC) / TPS92310 120V EVM (120VAC))

Figure 19. TPS92310 230V EVM Current Harmonic vs IEC61000–3–2 Class C Limits

## 10 Electromagnetic Interference (EMI)

In order to get quick estimation of the EMI filter performance, only PEAK conductive EMI scan was measured and the data was compared with the EN 55022 Class B conducted EMI Limits. All test conditions are under  $P_{IN}=8W$  full load.

Figure 20. Peak Conductive EMI per EN55022, Class B Limits (110VAC Live)

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
