## Monolithic Digital IC 2-phase Brushless Fan Motor Driver

### Overview

The LB1867M is a 2-phase unipolar brushless motor driver. With only a few peripheral parts, lockup protection and automatic recovery can be implemented. The IC can be configured for 12V or 24V operation and a wide range of variations, from Low speed to H-High speed and from 60cm to 120cm square using the same PCB. This makes it easy to design highly reliable fan motor installations.

### Features

- Output protection Zener diode with variable withstand voltage  
Z1, Z2 pins open:  $V_{OLM} = 57V$  (24V specification)  
Z1, Z2 pins shorted:  $V_{OLM} = 32V$  (12V specification)  
External Zener diode connected across Z1 – V<sub>CC</sub> pins: support for fans with large drive current
- External resistor allows configuration for 12V or 24V
- Direct Hall element connection possible (built-in Hall amplifier with hysteresis supports core without auxiliary electrode)
- Built-in output transistor with 1.0A output current (strengthened negative-current support for core without auxiliary electrode)
- Built-in rotation detection function: Low during rotation and High during stop
- Built-in lockup protection with automatic recovery
- Built-in thermal shutdown
