www.win-source.net 0086-755-83957316

# LM4040-N/-Q1 Precision Micropower Shunt Voltage Reference

## 1 Features

- SOT-23 AEC Q-100 Grades 1 and 3 Available
- Small Packages: SOT-23, TO-92, and SC70
- No Output Capacitor Required
- Tolerates Capacitive Loads
- Fixed Reverse Breakdown Voltages of 2.048 V, 2.5 V, 3 V, 4.096 V, 5 V, 8.192 V, and 10 V
- Key Specifications (2.5-V LM4040-N)
  - Output Voltage Tolerance (A Grade, 25°C): ±0.1% (Maximum)
  - Low Output Noise (10 Hz to 10 kHz): 35 $\mu V_{rms}$ (Typical)
  - Wide Operating Current Range: 60 µA to 15 mA
  - Industrial Temperature Range: −40°C to +85°C
  - Extended Temperature Range: −40°C to +125°C
  - Low Temperature Coefficient: 100 ppm/°C (Maximum)

## 2 Applications

- Portable, Battery-Powered Equipment
- Data Acquisition Systems
- Instrumentation
- Process Controls
- Energy Management
- Product Testing
- Automotives
- Precision Audio Components

## 3 Description

Ideal for space-critical applications, the LM4040-N precision voltage reference is available in the sub-miniature SC70 and SOT-23 surface-mount package. The advanced design of the LM4040-N eliminates the need for an external stabilizing capacitor while ensuring stability with any capacitive load, thus making the LM4040-N easy to use. Further reducing design effort is the availability of several fixed reverse breakdown voltages: 2.048 V, 2.5 V, 3 V, 4.096 V, 5 V, 8.192 V, and 10 V. The minimum operating current increases from 60 µA for the 2.5-V LM4040-N to 100 µA for the 10-V LM4040-N. All versions have a maximum operating current of 15 mA.

The LM4040-N uses a fuse and Zener-zap reverse breakdown voltage trim during wafer sort to ensure that the prime parts have an accuracy of better than ±0.1% (A grade) at 25°C. Bandgap reference temperature drift curvature correction and low dynamic impedance ensure stable reverse breakdown voltage accuracy over a wide range of operating temperatures and currents.

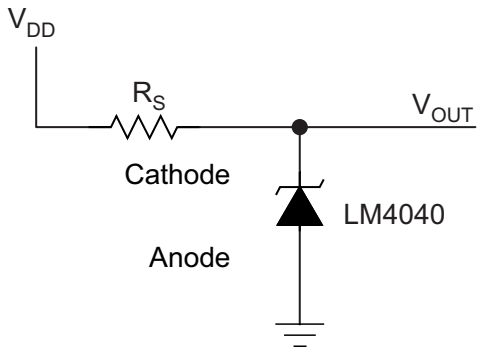
Also available is the LM4041-N with two reverse breakdown voltage versions: adjustable and 1.2 V. See the LM4041-N data sheet (SNOS641).

**Device Information**[1]

| PART NUMBER | PACKAGE | BODY SIZE (NOM) |
|---|---|---|
| LM4040-N | TO-92 (3) | 4.30 mm × 4.30 mm |
| | SC70 (5) | 2.00 mm × 1.25 mm |
| | SOT-23 (3) | 2.92 mm × 1.30 mm |
| LM4040-N-Q1 | SOT-23 (3) | 2.92 mm × 1.30 mm |

(1) For all available packages, see the orderable addendum at the end of the data sheet.

**Shunt Reference Application Schematic**



An IMPORTANT NOTICE at the end of this data sheet addresses availability, warranty, changes, use in safety-critical applications, intellectual property matters and other important disclaimers. PRODUCTION DATA.

# 4 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

**Changes from Revision J (August 2015) to Revision K** **Page**

- Updated pinout diagrams ..... 4

**Changes from Revision I (April 2015) to Revision J** **Page**

- Added *ESD Ratings* table, *Feature Description* section, *Device Functional Modes* section, *Application and Implementation* section, *Power Supply Recommendations* section, *Layout* section, *Device and Documentation Support* section, and *Mechanical, Packaging, and Orderable Information* section ..... 1

**Changes from Revision H (April 2013) to Revision I** **Page**

- Added some of the latest inclusions from new TI formatting and made available of the automotive grade for the SOT-23 package..... 1

**Changes from Revision G (July 2012) to Revision H** **Page**

- Changed layout of National Data Sheet to TI format ..... 1

# 6 Specifications

## 6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)(1)(2)

| | | MIN | MAX | UNIT |
|---|---|---|---|---|
| Reverse current | | | 20 | mA |
| Forward current | | | 10 | mA |
| Power dissipation ($T_A$ = 25°C)(3) | SOT-23 (M3) package | | 306 | mW |
| | TO-92 (Z) package | | 550 | mW |
| | SC70 (M7) package | | 241 | mW |
| Soldering temperature(4) | SOT-23 (M3) Package Peak Reflow (30 sec) | | 260 | °C |
| | TO-92 (Z) Package Soldering (10 sec) | | 260 | °C |
| | SC70 (M7) Package Peak Reflow (30 sec) | | 260 | °C |
| Storage temperature | | –65 | 150 | °C |

(1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(2) If Military/Aerospace specified devices are required, please contact the Texas Instruments Sales Office/ Distributors for availability and specifications.
(3) The maximum power dissipation must be derated at elevated temperatures and is dictated by $T_{Jmax}$ (maximum junction temperature), $R_{\theta JA}$ (junction to ambient thermal resistance), and $T_A$ (ambient temperature). The maximum allowable power dissipation at any temperature is $PD_{max} = (T_{Jmax} - T_A)/R_{\theta JA}$ or the number given in the *Absolute Maximum Ratings*, whichever is lower. For the LM4040-N, $T_{Jmax}$ = 125°C, and the typical thermal resistance ($R_{\theta JA}$), when board mounted, is 326°C/W for the SOT-23 package, and 180°C/W with 0.4″ lead length and 170°C/W with 0.125″ lead length for the TO-92 package and 415°C/W for the SC70 Package.
(4) For definitions of Peak Reflow Temperatures for Surface Mount devices, see the TI *Absolute Maximum Ratings for Soldering Application Report* (SNOA549).

## 6.2 ESD Ratings

| | | | VALUE | UNIT |
|---|---|---|---|---|
| $V_{(ESD)}$ | Electrostatic discharge | Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001(1) | ±2000 | V |
| | | Charged-device model (CDM), per JEDEC specification JESD22-C101(2) | ±200 | |

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

## 6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)(1)(2)

| | | MIN | MAX | UNIT |
|---|---|---|---|---|
| Temperature ($T_{min} \le T_A \le T_{max}$) | Industrial Temperature | –40°C ≤ $T_A$ ≤ 85 | | °C |
| | Extended Temperature | –40 ≤ $T_A$ ≤ 125°C | | °C |
| Reverse Current | LM4040-N-2.0 | 60 | 15 | µA to mA |
| | LM4040-N-2.5 | 60 | 15 | µA to mA |
| | LM4040-N-3.0 | 62 | 15 | µA to mA |
| | LM4040-N-4.1 | 68 | 15 | µA to mA |
| | LM4040-N-5.0 | 74 | 15 | µA to mA |
| | LM4040-N-8.2 | 91 | 15 | µA to mA |
| | LM4040-N-10.0 | 100 | 15 | µA to mA |

(1) *Absolute Maximum Ratings* indicate limits beyond which damage to the device may occur. *Recommended Operating Conditions* indicate conditions for which the device is functional, but do not ensure specific performance limits. For ensured specifications and test conditions, see the *Electrical Characteristics*. The ensured specifications apply only for the test conditions listed. Some performance characteristics may degrade when the device is not operated under the listed test conditions.

(2) The maximum power dissipation must be derated at elevated temperatures and is dictated by $T_{Jmax}$ (maximum junction temperature), $R_{\theta JA}$ (junction to ambient thermal resistance), and $T_A$ (ambient temperature). The maximum allowable power dissipation at any temperature is $PD_{max} = (T_{Jmax} - T_A)/R_{\theta JA}$ or the number given in the Absolute Maximum Ratings, whichever is lower. For the LM4040-N, $T_{Jmax}$ = 125°C, and the typical thermal resistance ($R_{\theta JA}$), when board mounted, is 326°C/W for the SOT-23 package, and 180°C/W with 0.4″ lead length and 170°C/W with 0.125″ lead length for the TO-92 package and 415°C/W for the SC70 package.

## 6.4 Thermal Information

| THERMAL METRIC(1) | | LM4040-N/LM4040-N-Q1 | | | UNIT |
|---|---|---|---|---|---|
| | | DBZ (SOT-23) | LP (TO-92) | DCK (SC70) | |
| | | 3 PINS | 3 PINS | 5 PINS | |
| $R_{\theta JA}$ | Junction-to-ambient thermal resistance | 291.9 | 166 | 267 | °C/W |
| $R_{\theta JC(top)}$ | Junction-to-case (top) thermal resistance | 114.3 | 88.2 | 95.6 | °C/W |
| $R_{\theta JB}$ | Junction-to-board thermal resistance | 62.3 | 145.2 | 48.1 | °C/W |
| $\psi_{JT}$ | Junction-to-top characterization parameter | 7.4 | 32.5 | 2.4 | °C/W |
| $\psi_{JB}$ | Junction-to-board characterization parameter | 61 | N/A | 47.3 | °C/W |
| $R_{\theta JC(bot)}$ | Junction-to-case (bottom) thermal resistance | N/A | N/A | N/A | °C/W |

(1) For more information about traditional and new thermal metrics, see the *Semiconductor and IC Package Thermal Metrics* application report, SPRA953.

## 6.5 Electrical Characteristics: 2-V LM4040-N $V_R$ Tolerance Grades 'A' And 'B'; Temperature Grade 'I'

all other limits $T_A = T_J = 25°C$. The grades A and B designate initial Reverse Breakdown Voltage tolerances of ±0.1% and ±0.2%, respectively.

| PARAMETER | | TEST CONDITIONS | | | MIN(1) | TYP | MAX(1) | UNIT |
|---|---|---|---|---|---|---|---|---|
| $V_R$ | Reverse Breakdown Voltage | $I_R$ = 100 µA | | | | 2.048 | | V |
| | Reverse Breakdown Voltage Tolerance(2) | $I_R$ = 100 µA | LM4040AIM3<br>LM4040AIZ | | | | ±2 | mV |
| | | | LM4040BIM3<br>LM4040BIZ<br>LM4040BIM7 | | | | ±4.1 | |
| | | | LM4040AIM3<br>LM4040AIZ | $T_A = T_J = T_{MIN}$ to $T_{MAX}$ | | | ±15 | mV |
| | | | LM4040BIM3<br>LM4040BIZ<br>LM4040BIM7 | $T_A = T_J = T_{MIN}$ to $T_{MAX}$ | | | ±17 | |
| $I_{RMIN}$ | Minimum Operating Current | | $T_A = T_J = 25°C$ | | | 45 | 60 | µA |
| | | | $T_A = T_J = T_{MIN}$ to $T_{MAX}$ | | | | 65 | |
| $\Delta V_R/\Delta T$ | Average Reverse Breakdown Voltage Temperature Coefficient(2) | $I_R$ = 10 mA | | | | ±20 | | ppm/°C |
| | | $I_R$ = 1 mA | $T_A = T_J = 25°C$ | | | ±15 | | ppm/°C |
| | | | $T_A = T_J = T_{MIN}$ to $T_{MAX}$ | | | | ±100 | |
| | | $I_R$ = 100 µA | | | | ±15 | | ppm/°C |
| $\Delta V_R/\Delta I_R$ | Reverse Breakdown Voltage Change with Operating Current Change(3) | $I_{RMIN} \le I_R \le 1$ mA | $T_A = T_J = 25°C$ | | | 0.3 | 0.8 | mV |
| | | | $T_A = T_J = T_{MIN}$ to $T_{MAX}$ | | | | 1 | |
| | | 1 mA ≤ $I_R$ ≤ 15 mA | $T_A = T_J = 25°C$ | | | 2.5 | 6 | mV |
| | | | $T_A = T_J = T_{MIN}$ to $T_{MAX}$ | | | | 8 | |
| $Z_R$ | Reverse Dynamic Impedance | $I_R$ = 1 mA, f = 120 Hz,<br>$I_{AC} = 0.1\ I_R$ | | | | 0.3 | 0.8 | Ω |
| $e_N$ | Wideband Noise | $I_R$ = 100 µA<br>10 Hz ≤ f ≤ 10 kHz | | | | 35 | | $\mu V_{rms}$ |
| $\Delta V_R$ | Reverse Breakdown Voltage Long Term Stability | t = 1000 hrs<br>T = 25°C ±0.1°C<br>$I_R$ = 100 µA | | | | 120 | | ppm |
| $V_{HYST}$ | Thermal Hysteresis(4) | ΔT = –40°C to 125°C | | | | 0.08% | | |

(1) Limits are 100% production tested at 25°C. Limits over temperature are ensured through correlation using Statistical Quality Control (SQC) methods. The limits are used to calculate AOQL.

(2) The overtemperature limit for Reverse Breakdown Voltage Tolerance is defined as the room temperature Reverse Breakdown Voltage Tolerance ±[($\Delta V_R/\Delta T$)(max$\Delta T$)($V_R$)]. Where, $\Delta V_R/\Delta T$ is the $V_R$ temperature coefficient, max$\Delta T$ is the maximum difference in temperature from the reference point of 25°C to $T_{MIN}$ or $T_{MAX}$, and $V_R$ is the reverse breakdown voltage. The total overtemperature tolerance for the different grades in the industrial temperature range where max$\Delta T$ = 65°C is shown below:
A-grade: ±0.75% = ±0.1% ±100 ppm/°C × 65°C
B-grade: ±0.85% = ±0.2% ±100 ppm/°C × 65°C
C-grade: ±1.15% = ±0.5% ±100 ppm/°C × 65°C
D-grade: ±1.98% = ±1.0% ±150 ppm/°C × 65°C
E-grade: ±2.98% = ±2.0% ±150 ppm/°C × 65°C
The total overtemperature tolerance for the different grades in the extended temperature range where max ΔT = 100 °C is shown below:
C-grade: ±1.5% = ±0.5% ±100 ppm/°C × 100°C
D-grade: ±2.5% = ±1.0% ±150 ppm/°C × 100°C
E-grade: ±3.5% = ±2.0% ±150 ppm/°C × 100°C
Therefore, as an example, the A-grade 2.5-V LM4040-N has an overtemperature Reverse Breakdown Voltage tolerance of ±2.5 V × 0.75% = ±19 mV.

(3) Load regulation is measured on pulse basis from no load to the specified load current. Output changes due to die temperature change must be taken into account separately.

(4) Thermal hysteresis is defined as the difference in voltage measured at 25°C after cycling to temperature -40°C and the 25°C measurement after cycling to temperature 125°C.

## 6.6 Electrical Characteristics: 2-V LM4040-N $V_R$ Tolerance Grades 'C', 'D', And 'E'; Temperature Grade 'I'

all other limits $T_A = T_J = 25°C$. The grades C, D and E designate initial Reverse Breakdown Voltage tolerances of ±0.5%, ±1% and ±2%, respectively.

| PARAMETER | | TEST CONDITIONS | | | MIN(1) | TYP(2) | MAX(1) | UNIT |
|---|---|---|---|---|---|---|---|---|
| $V_R$ | Reverse Breakdown Voltage | $I_R$ = 100 µA | | | | 2.048 | | V |
| $V_R$ | Reverse Breakdown Voltage Tolerance(3) | $I_R$ = 100 µA | LM4040CIM3 LM4040CIZ LM4040CIM7 | $T_A = T_J = 25°C$ | | | ±10 | mV |
| | | | | $T_A = T_J = T_{MIN}$ to $T_{MAX}$ | | | ±23 | |
| | | | LM4040DIM3 LM4040DIZ LM4040DIM7 | $T_A = T_J = 25°C$ | | | ±20 | |
| | | | | $T_A = T_J = T_{MIN}$ to $T_{MAX}$ | | | ±40 | |
| | | | LM4040EIZ LM4040EIM7 | $T_A = T_J = 25°C$ | | | ±41 | |
| | | | | $T_A = T_J = T_{MIN}$ to $T_{MAX}$ | | | ±60 | |
| $I_{RMIN}$ | Minimum Operating Current | | LM4040CIM3 LM4040CIZ LM4040CIM7 | $T_A = T_J = 25°C$ | | 45 | 60 | µA |
| | | | | $T_A = T_J = T_{MIN}$ to $T_{MAX}$ | | | 65 | |
| | | | LM4040DIM3 LM4040DIZ LM4040DIM7 | $T_A = T_J = 25°C$ | | 45 | 65 | |
| | | | | $T_A = T_J = T_{MIN}$ to $T_{MAX}$ | | | 70 | |
| | | | LM4040EIZ LM4040EIM7 | $T_A = T_J = 25°C$ | | 45 | 65 | |
| | | | | $T_A = T_J = T_{MIN}$ to $T_{MAX}$ | | | 70 | |
| $\Delta V_R/\Delta T$ | Average Reverse Breakdown Voltage Temperature Coefficient(3) | $I_R$ = 10 mA | | | | ±20 | | ppm/°C |
| | | $I_R$ = 1 mA | LM4040CIM3 LM4040CIZ LM4040CIM7 | $T_A = T_J = 25°C$ | | ±15 | | |
| | | | | $T_A = T_J = T_{MIN}$ to $T_{MAX}$ | | | ±100 | |
| | | | LM4040DIM3 LM4040DIZ LM4040DIM7 | $T_A = T_J = 25°C$ | | ±15 | | |
| | | | | $T_A = T_J = T_{MIN}$ to $T_{MAX}$ | | | ±150 | |
| | | | LM4040EIZ LM4040EIM7 | $T_A = T_J = 25°C$ | | ±15 | | |
| | | | | $T_A = T_J = T_{MIN}$ to $T_{MAX}$ | | | ±150 | |
| | | $I_R$ = 100 µA | | | | ±15 | | |

(1) Limits are 100% production tested at 25°C. Limits over temperature are ensured through correlation using Statistical Quality Control (SQC) methods. The limits are used to calculate AOQL.
(2) Typicals are at $T_J = 25°C$ and represent most likely parametric norm.
(3) The overtemperature limit for Reverse Breakdown Voltage Tolerance is defined as the room temperature Reverse Breakdown Voltage Tolerance ±[($\Delta V_R/\Delta T$)(max$\Delta T$)($V_R$)]. Where, $\Delta V_R/\Delta T$ is the $V_R$ temperature coefficient, max$\Delta T$ is the maximum difference in temperature from the reference point of 25°C to $T_{MIN}$ or $T_{MAX}$, and $V_R$ is the reverse breakdown voltage. The total overtemperature tolerance for the different grades in the industrial temperature range where max$\Delta T$ = 65°C is shown below:
A-grade: ±0.75% = ±0.1% ±100 ppm/°C × 65°C
B-grade: ±0.85% = ±0.2% ±100 ppm/°C × 65°C
C-grade: ±1.15% = ±0.5% ±100 ppm/°C × 65°C
D-grade: ±1.98% = ±1.0% ±150 ppm/°C × 65°C
E-grade: ±2.98% = ±2.0% ±150 ppm/°C × 65°C
The total overtemperature tolerance for the different grades in the extended temperature range where max $\Delta T$ = 100 °C is shown below:
C-grade: ±1.5% = ±0.5% ±100 ppm/°C × 100°C
D-grade: ±2.5% = ±1.0% ±150 ppm/°C × 100°C
E-grade: ±3.5% = ±2.0% ±150 ppm/°C × 100°C
Therefore, as an example, the A-grade 2.5-V LM4040-N has an overtemperature Reverse Breakdown Voltage tolerance of ±2.5V × 0.75% = ±19 mV.

| | | | LM4040DEM3 | $T_A = T_J = 25°C$ | | 2.5 | 8 | |
| | | | | $T_A = T_J = T_{MIN}$ to $T_{MAX}$ | | | 10 | |
| | | | LM4040EEM3 | $T_A = T_J = 25°C$ | | 2.5 | 8 | |
| | | | | $T_A = T_J = T_{MIN}$ to $T_{MAX}$ | | | 10 | |

(1) Limits are 100% production tested at 25°C. Limits over temperature are ensured through correlation using Statistical Quality Control (SQC) methods. The limits are used to calculate AOQL.
(2) Typicals are at $T_J$ = 25°C and represent most likely parametric norm.
(3) The overtemperature limit for Reverse Breakdown Voltage Tolerance is defined as the room temperature Reverse Breakdown Voltage Tolerance ±[($\Delta V_R/\Delta T$)(max$\Delta T$)($V_R$)]. Where, $\Delta V_R/\Delta T$ is the $V_R$ temperature coefficient, max$\Delta T$ is the maximum difference in temperature from the reference point of 25°C to $T_{MIN}$ or $T_{MAX}$, and $V_R$ is the reverse breakdown voltage. The total overtemperature tolerance for the different grades in the industrial temperature range where max$\Delta T$ = 65°C is shown below:
A-grade: ±0.75% = ±0.1% ±100 ppm/°C × 65°C
B-grade: ±0.85% = ±0.2% ±100 ppm/°C × 65°C
C-grade: ±1.15% = ±0.5% ±100 ppm/°C × 65°C
D-grade: ±1.98% = ±1.0% ±150 ppm/°C × 65°C
E-grade: ±2.98% = ±2.0% ±150 ppm/°C × 65°C
The total overtemperature tolerance for the different grades in the extended temperature range where max ΔT = 100 °C is shown below:
C-grade: ±1.5% = ±0.5% ±100 ppm/°C × 100°C
D-grade: ±2.5% = ±1.0% ±150 ppm/°C × 100°C
E-grade: ±3.5% = ±2.0% ±150 ppm/°C × 100°C
Therefore, as an example, the A-grade 2.5-V LM4040-N has an overtemperature Reverse Breakdown Voltage tolerance of ±2.5V × 0.75% = ±19 mV.
(4) Load regulation is measured on pulse basis from no load to the specified load current. Output changes due to die temperature change must be taken into account separately.

| | | | | $T_A = T_J = T_{MIN}$ to $T_{MAX}$ | | | 10 | |

(1) Limits are 100% production tested at 25°C. Limits over temperature are ensured through correlation using Statistical Quality Control (SQC) methods. The limits are used to calculate AOQL.
(2) Typicals are at $T_J$ = 25°C and represent most likely parametric norm.
(3) The overtemperature limit for Reverse Breakdown Voltage Tolerance is defined as the room temperature Reverse Breakdown Voltage Tolerance ±[($\Delta V_R/\Delta T$)(max$\Delta T$)($V_R$)]. Where, $\Delta V_R/\Delta T$ is the $V_R$ temperature coefficient, max$\Delta T$ is the maximum difference in temperature from the reference point of 25°C to $T_{MIN}$ or $T_{MAX}$, and $V_R$ is the reverse breakdown voltage. The total overtemperature tolerance for the different grades in the industrial temperature range where max$\Delta T$ = 65°C is shown below:
A-grade: ±0.75% = ±0.1% ±100 ppm/°C × 65°C
B-grade: ±0.85% = ±0.2% ±100 ppm/°C × 65°C
C-grade: ±1.15% = ±0.5% ±100 ppm/°C × 65°C
D-grade: ±1.98% = ±1.0% ±150 ppm/°C × 65°C
E-grade: ±2.98% = ±2.0% ±150 ppm/°C × 65°C
The total overtemperature tolerance for the different grades in the extended temperature range where max ΔT = 100 °C is shown below:
C-grade: ±1.5% = ±0.5% ±100 ppm/°C × 100°C
D-grade: ±2.5% = ±1.0% ±150 ppm/°C × 100°C
E-grade: ±3.5% = ±2.0% ±150 ppm/°C × 100°C
Therefore, as an example, the A-grade 2.5-V LM4040-N has an overtemperature Reverse Breakdown Voltage tolerance of ±2.5V × 0.75% = ±19 mV.
(4) Load regulation is measured on pulse basis from no load to the specified load current. Output changes due to die temperature change must be taken into account separately.

(1) Limits are 100% production tested at 25°C. Limits over temperature are ensured through correlation using Statistical Quality Control (SQC) methods. The limits are used to calculate AOQL.
(2) Typicals are at $T_J = 25°C$ and represent most likely parametric norm.
(3) The (overtemperature) limit for Reverse Breakdown Voltage Tolerance is defined as the room temperature Reverse Breakdown Voltage Tolerance ±[($\Delta V_R/\Delta T$)(max$\Delta T$)($V_R$)]. Where, $\Delta V_R/\Delta T$ is the $V_R$ temperature coefficient, max$\Delta T$ is the maximum difference in temperature from the reference point of 25°C to $T_{MIN}$ or $T_{MAX}$, and $V_R$ is the reverse breakdown voltage. The total overtemperature tolerance for the different grades in the industrial temperature range where max$\Delta T$ = 65°C is shown below:
A-grade: ±0.75% = ±0.1% ±100 ppm/°C × 65°C
B-grade: ±0.85% = ±0.2% ±100 ppm/°C × 65°C
C-grade: ±1.15% = ±0.5% ±100 ppm/°C × 65°C
D-grade: ±1.98% = ±1.0% ±150 ppm/°C × 65°C
E-grade: ±2.98% = ±2.0% ±150 ppm/°C × 65°C
The total overtemperature tolerance for the different grades in the extended temperature range where max ΔT = 100 °C is shown below:
C-grade: ±1.5% = ±0.5% ±100 ppm/°C × 100°C
D-grade: ±2.5% = ±1.0% ±150 ppm/°C × 100°C
E-grade: ±3.5% = ±2.0% ±150 ppm/°C × 100°C
Therefore, as an example, the A-grade 2.5-V LM4040-N has an overtemperature Reverse Breakdown Voltage tolerance of ±2.5V × 0.75% = ±19 mV.
(4) Load regulation is measured on pulse basis from no load to the specified load current. Output changes due to die temperature change must be taken into account separately.

(1) Limits are 100% production tested at 25°C. Limits over temperature are ensured through correlation using Statistical Quality Control (SQC) methods. The limits are used to calculate AOQL.
(2) Typicals are at $T_J = 25°C$ and represent most likely parametric norm.
(3) The (overtemperature) limit for Reverse Breakdown Voltage Tolerance is defined as the room temperature Reverse Breakdown Voltage Tolerance ±[($\Delta V_R/\Delta T$)(max$\Delta T$)($V_R$)]. Where, $\Delta V_R/\Delta T$ is the $V_R$ temperature coefficient, max$\Delta T$ is the maximum difference in temperature from the reference point of 25°C to $T_{MIN}$ or $T_{MAX}$, and $V_R$ is the reverse breakdown voltage. The total overtemperature tolerance for the different grades in the industrial temperature range where max$\Delta T$ = 65°C is shown below:
A-grade: ±0.75% = ±0.1% ±100 ppm/°C × 65°C
B-grade: ±0.85% = ±0.2% ±100 ppm/°C × 65°C
C-grade: ±1.15% = ±0.5% ±100 ppm/°C × 65°C
D-grade: ±1.98% = ±1.0% ±150 ppm/°C × 65°C
E-grade: ±2.98% = ±2.0% ±150 ppm/°C × 65°C
The total overtemperature tolerance for the different grades in the extended temperature range where max ΔT = 100 °C is shown below:
C-grade: ±1.5% = ±0.5% ±100 ppm/°C × 100°C
D-grade: ±2.5% = ±1.0% ±150 ppm/°C × 100°C
E-grade: ±3.5% = ±2.0% ±150 ppm/°C × 100°C
Therefore, as an example, the A-grade 2.5-V LM4040-N has an overtemperature Reverse Breakdown Voltage tolerance of ±2.5V × 0.75% = ±19 mV.

| | | | | $T_A = T_J = T_{MIN}$ to $T_{MAX}$ | | | 12 | |
| | | | LM4040DEM3 | $T_A = T_J = 25°C$ | | 3.5 | 8 | |
| | | | | $T_A = T_J = T_{MIN}$ to $T_{MAX}$ | | | 15 | |
| $Z_R$ | Reverse Dynamic Impedance | $I_R$ = 1 mA, f = 120 Hz, $I_{AC}$ = 0.1 $I_R$ | | | | 0.5 | 1.1 | Ω |
| $e_N$ | Wideband Noise | $I_R$ = 100 µA<br>10 Hz ≤ f ≤ 10 kHz | | | | 80 | | $\mu V_{rms}$ |
| $\Delta V_R$ | Reverse Breakdown Voltage Long Term Stability | t = 1000 hrs<br>T = 25°C ±0.1°C<br>$I_R$ = 100 µA | | | | 120 | | ppm |
| $V_{HYST}$ | Thermal Hysteresis(4) | ΔT = −40°C to 125°C | | | | 0.08% | | |

(1) Limits are 100% production tested at 25°C. Limits over temperature are ensured through correlation using Statistical Quality Control (SQC) methods. The limits are used to calculate AOQL.

(2) The (overtemperature) limit for Reverse Breakdown Voltage Tolerance is defined as the room temperature Reverse Breakdown Voltage Tolerance ±[($\Delta V_R/\Delta T$)(max$\Delta T$)($V_R$)]. Where, $\Delta V_R/\Delta T$ is the $V_R$ temperature coefficient, max$\Delta T$ is the maximum difference in temperature from the reference point of 25°C to $T_{MIN}$ or $T_{MAX}$, and $V_R$ is the reverse breakdown voltage. The total overtemperature tolerance for the different grades in the industrial temperature range where max$\Delta T$ = 65°C is shown below:
A-grade: ±0.75% = ±0.1% ±100 ppm/°C × 65°C
B-grade: ±0.85% = ±0.2% ±100 ppm/°C × 65°C
C-grade: ±1.15% = ±0.5% ±100 ppm/°C × 65°C
D-grade: ±1.98% = ±1.0% ±150 ppm/°C × 65°C
E-grade: ±2.98% = ±2.0% ±150 ppm/°C × 65°C
The total overtemperature tolerance for the different grades in the extended temperature range where max ΔT = 100 °C is shown below:
C-grade: ±1.5% = ±0.5% ±100 ppm/°C × 100°C
D-grade: ±2.5% = ±1.0% ±150 ppm/°C × 100°C
E-grade: ±3.5% = ±2.0% ±150 ppm/°C × 100°C
Therefore, as an example, the A-grade 2.5-V LM4040-N has an overtemperature Reverse Breakdown Voltage tolerance of ±2.5V × 0.75% = ±19 mV.

(3) Load regulation is measured on pulse basis from no load to the specified load current. Output changes due to die temperature change must be taken into account separately.

(4) Thermal hysteresis is defined as the difference in voltage measured at +25°C after cycling to temperature -40°C and the 25°C measurement after cycling to temperature 125°C.

| | | | $T_A = T_J = T_{MIN}$ to $T_{MAX}$ | | | | ±100 | |
| | | $I_R$ = 150 µA | | | | ±20 | | |
| $\Delta V_R/\Delta I_R$ | Reverse Breakdown Voltage Change with Operating Current Change(4) | $I_{RMIN} \le I_R \le 1$ mA | $T_A = T_J = 25°C$ | | | 0.8 | 1.5 | mV |
| | | | $T_A = T_J = T_{MIN}$ to $T_{MAX}$ | | | | 3.5 | |
| | | 1 mA ≤ $I_R$ ≤ 15 mA | $T_A = T_J = 25°C$ | | | 8 | 12 | |
| | | | $T_A = T_J = T_{MIN}$ to $T_{MAX}$ | | | | 23 | |
| $Z_R$ | Reverse Dynamic Impedance | $I_R$ = 1 mA, f = 120 Hz, $I_{AC}$ = 0.1 $I_R$ | | | | 0.7 | 1.7 | Ω |
| $e_N$ | Wideband Noise | $I_R$ = 150 µA 10 Hz ≤ f ≤ 10 kHz | | | | 180 | | $\mu V_{rms}$ |
| $\Delta V_R$ | Reverse Breakdown Voltage Long Term Stability | t = 1000 hrs T = 25°C ±0.1°C $I_R$ = 150 µA | | | | 120 | | ppm |
| $V_{HYST}$ | Thermal Hysteresis(5) | ΔT = −40°C to 125°C | | | | 0.08% | | |

(1) Limits are 100% production tested at 25°C. Limits over temperature are ensured through correlation using Statistical Quality Control (SQC) methods. The limits are used to calculate AOQL.
(2) Typicals are at $T_J$ = 25°C and represent most likely parametric norm.
(3) The (overtemperature) limit for Reverse Breakdown Voltage Tolerance is defined as the room temperature Reverse Breakdown Voltage Tolerance ±[($\Delta V_R/\Delta T$)(max$\Delta T$)($V_R$)]. Where, $\Delta V_R/\Delta T$ is the $V_R$ temperature coefficient, max$\Delta T$ is the maximum difference in temperature from the reference point of 25°C to $T_{MIN}$ or $T_{MAX}$, and $V_R$ is the reverse breakdown voltage. The total overtemperature tolerance for the different grades in the industrial temperature range where max$\Delta T$ = 65°C is shown below:
A-grade: ±0.75% = ±0.1% ±100 ppm/°C × 65°C
B-grade: ±0.85% = ±0.2% ±100 ppm/°C × 65°C
C-grade: ±1.15% = ±0.5% ±100 ppm/°C × 65°C
D-grade: ±1.98% = ±1.0% ±150 ppm/°C × 65°C
E-grade: ±2.98% = ±2.0% ±150 ppm/°C × 65°C
The total overtemperature tolerance for the different grades in the extended temperature range where max ΔT = 100 °C is shown below:
C-grade: ±1.5% = ±0.5% ±100 ppm/°C × 100°C
D-grade: ±2.5% = ±1.0% ±150 ppm/°C × 100°C
E-grade: ±3.5% = ±2.0% ±150 ppm/°C × 100°C
Therefore, as an example, the A-grade 2.5-V LM4040-N has an overtemperature Reverse Breakdown Voltage tolerance of ±2.5V × 0.75% = ±19 mV.
(4) Load regulation is measured on pulse basis from no load to the specified load current. Output changes due to die temperature change must be taken into account separately.
(5) Thermal hysteresis is defined as the difference in voltage measured at +25°C after cycling to temperature -40°C and the 25°C measurement after cycling to temperature 125°C.

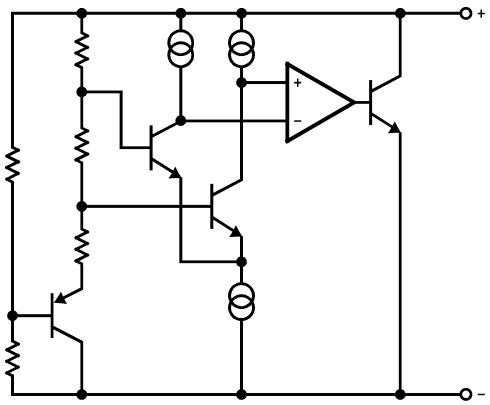
# 8 Detailed Description

## 8.1 Overview

The LM4040 device is a precision micropower shunt voltage reference available in 7 different fixed-output voltage options and three different packages to meet small footprint requirements. The part is also available in five different tolerance grades.

## 8.2 Functional Block Diagram



## 8.3 Feature Description

The LM4040 device is effectively a precision Zener diode. The part requires a small quiescent current for regulation, and regulates the output voltage by shunting more or less current to ground, depending on input voltage and load. The only external component requirement is a resistor between the cathode and the input voltage to set the input current. An external capacitor can be used on the input or output, but is not required.

## 8.4 Device Functional Modes

The LM4040 device is a fixed output voltage part, where the feedback is internal. Therefore, the part can only operate is a closed loop mode and the output voltage cannot be adjusted. The output voltage will remain in regulation as long as $I_R$ is between $I_{RMIN}$, see *Electrical Characteristics: 2-V LM4040-N $V_R$ Tolerance Grades 'A' And 'B'; Temperature Grade 'I'*, and $I_{RMAX}$, 15 mA. Proper selection of the external resistor for input voltage range and load current range will ensure these conditions are met.

# 9 Application and Implementation

**NOTE**

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

## 9.1 Application Information

The LM4040-N is a precision micropower curvature-corrected bandgap shunt voltage reference. For space critical applications, the LM4040-N is available in the sub-miniature SOT-23 and SC70 surface-mount package. The LM4040-N has been designed for stable operation without the need of an external capacitor connected between the + pin and the − pin. If, however, a bypass capacitor is used, the LM4040-N remains stable. Reducing design effort is the availability of several fixed reverse breakdown voltages: 2.048 V, 2.5 V, 3 V, 4.096 V, 5 V, 8.192 V, and 10 V. The minimum operating current increases from 60 µA for the LM4040-N-2.048 and LM4040-N-2.5 to 100 µA for the 10-V LM4040-N. All versions have a maximum operating current of 15 mA.

LM4040-Ns in the SOT-23 packages have a parasitic Schottky diode between pin 2 (−) and pin 3 (Die attach interface contact). Therefore, pin 3 of the SOT-23 package must be left floating or connected to pin 2.

LM4040-Ns in the SC70 have a parasitic Schottky diode between pin 1 (−) and pin 2 (Die attach interface contact). Therefore, pin 2 must be left floating or connected to pin1.

The 4.096-V version allows single 5-V 12-bit ADCs or DACs to operate with an LSB equal to 1 mV. For 12-bit ADCs or DACs that operate on supplies of 10 V or greater, the 8.192-V version gives 2 mV per LSB.

The typical thermal hysteresis specification is defined as the change in 25°C voltage measured after thermal cycling. The device is thermal cycled to temperature –40°C and then measured at 25°C. Next the device is thermal cycled to temperature 125°C and again measured at 25°C. The resulting $V_{OUT}$ delta shift between the 25°C measurements is thermal hysteresis. Thermal hysteresis is common in precision references and is induced by thermal-mechanical package stress. Changes in environmental storage temperature, operating temperature and board mounting temperature are all factors that can contribute to thermal hysteresis.

In a conventional shunt regulator application (Figure 10) , an external series resistor ($R_S$) is connected between the supply voltage and the LM4040-N. $R_S$ determines the current that flows through the load ($I_L$) and the LM4040-N ($I_Q$). Since load current and supply voltage may vary, $R_S$ should be small enough to supply at least the minimum acceptable $I_Q$ to the LM4040-N even when the supply voltage is at its minimum and the load current is at its maximum value. When the supply voltage is at its maximum and $I_L$ is at its minimum, $R_S$ should be large enough so that the current flowing through the LM4040-N is less than 15 mA.

$R_S$ is determined by the supply voltage, ($V_S$), the load and operating current, ($I_L$ and $I_Q$), and the LM4040-N's reverse breakdown voltage, $V_R$.

$$R_S = \frac{V_S - V_R}{I_L + I_Q} \tag{1}$$

## 9.2 Typical Applications

### 9.2.1 Shunt Regulator

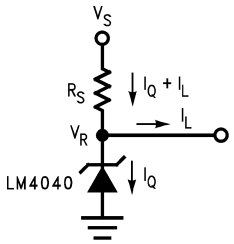

**Figure 10. Shunt Regulator Schematic**

Copyright © 2000–2016, Texas Instruments Incorporated

## Typical Applications (continued)

### 9.2.1.1 Design Requirements

$V_{IN} > V_{OUT}$

Select $R_S$ such that:

$I_{RMIN} < I_R < I_{RMAX}$ where $I_{RMAX}$ = 15 mA

See *Electrical Characteristics: 2-V LM4040-N $V_R$ Tolerance Grades 'A' And 'B'; Temperature Grade 'I'* for minimum operating current for each voltage option and grade.

### 9.2.1.2 Detailed Design Procedure

The resistor $R_S$ must be selected such that current IR will remain in the operational region of the part for the entire $V_{IN}$ range and load current range. The two extremes to consider are $V_{IN}$ at its minimum, and the load at its maximum, where $R_S$ must be small enough for $I_R$ to remain above $I_{RMIN}$. The other extreme is $V_{IN}$ at its maximum, and the load at its minimum, where $R_S$ must be large enough to maintain $I_R < I_{RMAX}$. For most designs, 0.1 mA ≤ $I_R$ ≤ 1 mA is a good starting point.

Use Equation 2 and Equation 3 to set $R_S$ between $R_{S_MIN}$ and $R_{S_MAX}$.

$$R_{S_MIN} = \frac{V_{IN_MAX} - V_{OUT}}{I_{LOAD_MIN} + I_{R_MAX}} \quad (2)$$

$$R_{S_MAX} = \frac{V_{IN_MIN} - V_{OUT}}{I_{LOAD_MAX} + I_{R_MIN}} \quad (3)$$

### 9.2.1.3 Application Curve

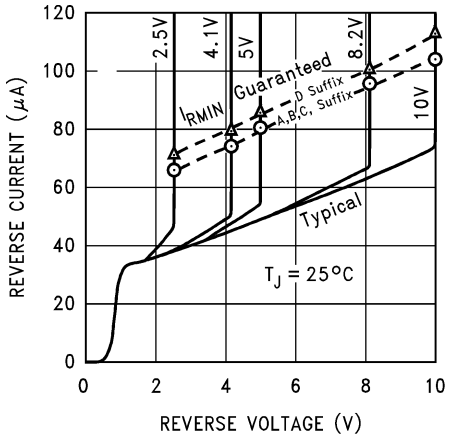

**Figure 11. Reverse Characteristics And Minimum Operating Current**

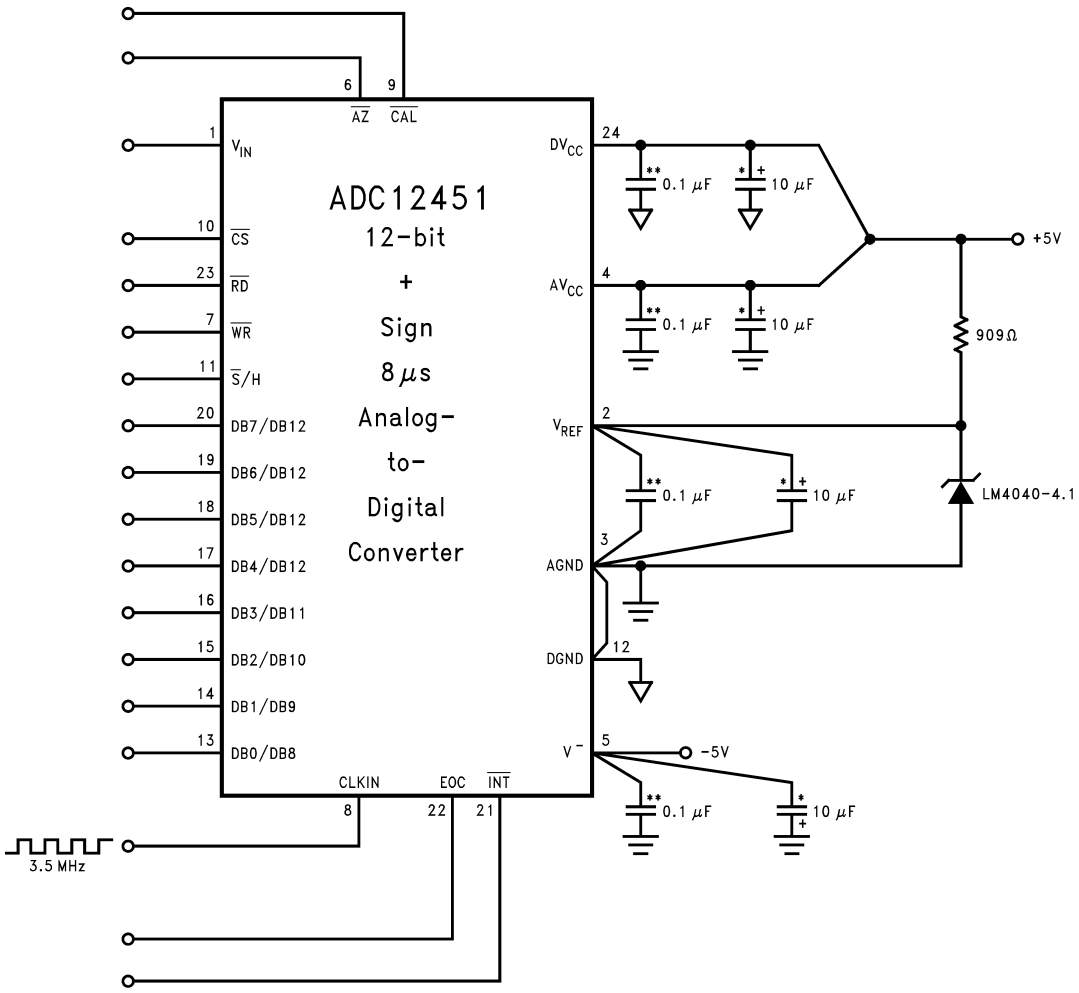
## Typical Applications (continued)

### 9.2.2 4.1-V ADC Application



**Ceramic monolithic
*Tantalum

**Figure 12. 4.1-V LM4040-N'S Nominal 4.096 Breakdown Voltage Gives ADC12451 1 MV/LSB**

#### *9.2.2.1 Design Requirements*

The only design requirement is for an output voltage of 4.096 V.

#### *9.2.2.2 Detailed Design Procedure*

Using an LM4040-4.1, select an appropriate $R_S$ to sufficiently power the device. Set the target $I_R$ for 1 mA. With an input voltage of 5 V, the resistor can be calculated:

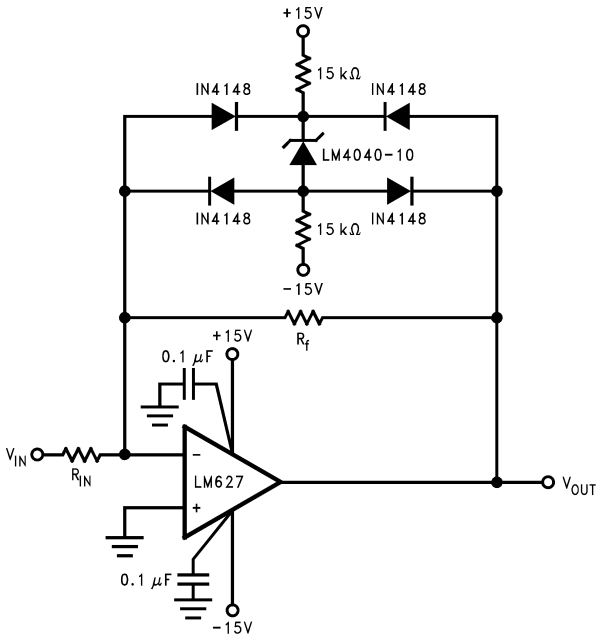
$$R = \frac{5\ V - 4.096\ V}{1\,mA} = 904\ \Omega \quad (4)$$

The closest available resistance of 909 Ω is used here, which in turn yields an $I_R$ of 994 μA.

Copyright © 2000–2016, Texas Instruments Incorporated

## Typical Applications (continued)

### 9.2.3 Bounded Amplifier



Nominal clamping voltage is ±11.5 V (LM4040-N's reverse breakdown voltage +2 diode $V_F$).

**Figure 13. Bounded Amplifier Reduces Saturation-Induced Delays and Can Prevent Succeeding Stage Damage**

#### *9.2.3.1 Design Requirements*

Design an amplifier with output clamped at ±11.5 V.

#### *9.2.3.2 Detailed Design Procedure*

With amplifier rails of ±15 V, the output can be bound to ±11.5 V with the LM4040-10 and two nominal diode voltage drops of 0.7 V.

$$V_{OUTBound} = 2 \times VFWD + VZ \quad (5)$$

$$V_{OUTBound} = 1.4\ V + 10\ V \quad (6)$$

Select $R_S$ = 15 kΩ to keep $I_R$ low. Calculate $I_R$ to confirm RS selection.

$$I_R = (V_{IN} – V_{OUT}) / R, \text{ however in this case, the negative supply must be taken into account.} \quad (7)$$

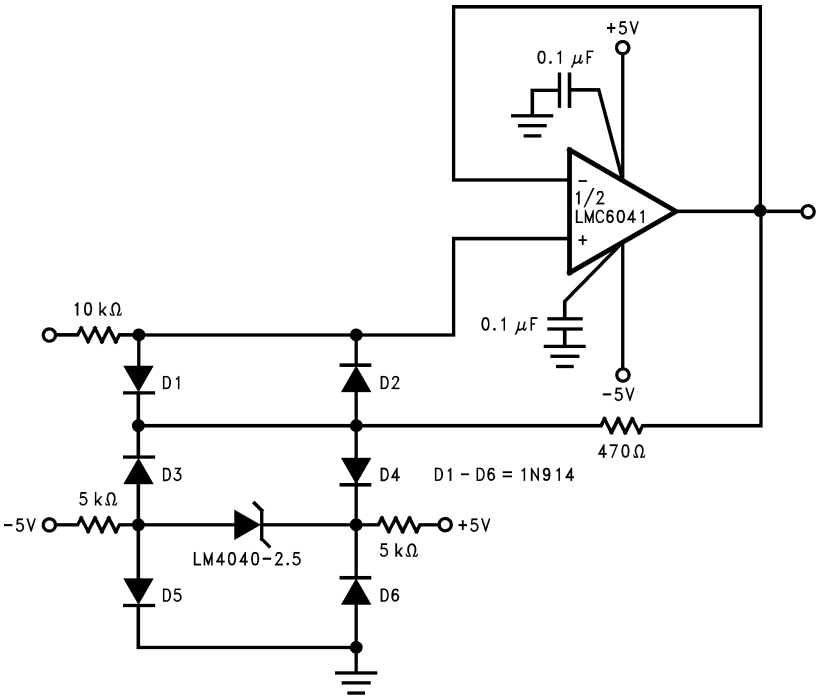
$$I_R = (V_{IN+} – V_{IN-} – V_{OUT})/R = (30\ V – 10\ V) / (R_{S1}+R_{S2}) = 20\ V / 30\ k\Omega = 0.667\ mA \quad (8)$$

This is an acceptable value for $I_R$ that will not draw excessive current, but prevents the part from being starved for current.

Copyright © 2000–2016, Texas Instruments Incorporated

## Typical Applications (continued)

### 9.2.4 Protecting Op-Amp Input



The bounding voltage is ±4 V with the 2.5-V LM4040-N (LM4040-N's reverse breakdown voltage + 3 diode $V_F$).

**Figure 14. Protecting Op Amp Input**

#### *9.2.4.1 Design Requirements*

Limit the input voltage to the op-amp to ±4 V.

#### *9.2.4.2 Detailed Design Procedure*

Similar to *Bounded Amplifier*, this design uses a LM4040-2.5 and three forward diode voltage drops to create a voltage clamp. The procedure for selecting the $R_S$ resistors, in this case 5 kΩ, is the same as *Detailed Design Procedure*.

$$I_R = (V_{IN+} – V_{IN-} – V_{OUT}) / R = (10\ V – 2.5\ V) / (R_{S1} + R_{S2}) = 7.5\ V / 10\ k\Omega = 0.750\ mA \quad (9)$$

Copyright © 2000–2016, Texas Instruments Incorporated

## Typical Applications (continued)

### 9.2.5 Precision ±4.096-V Reference

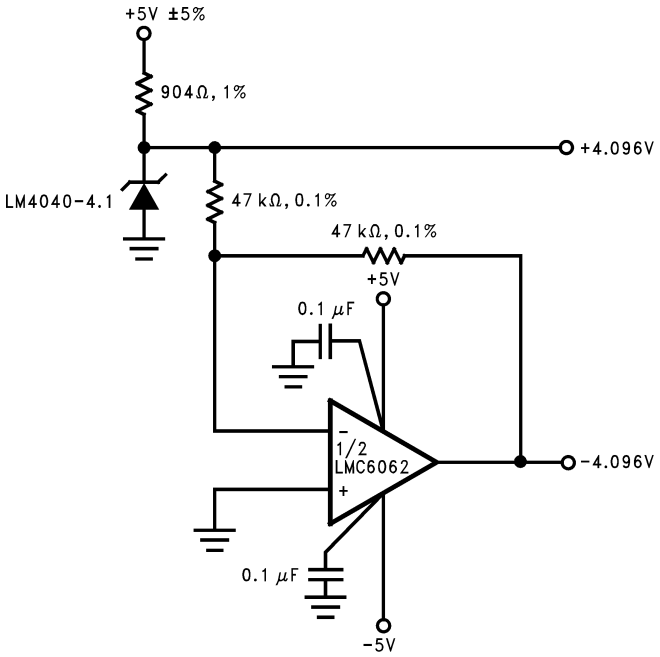


**Figure 15. Precision ±4.096-V Reference**

#### *9.2.5.1 Design Requirements*

Use a single voltage reference to create positive and negative reference rails, ±4.096 V.

#### *9.2.5.2 Detailed Design Procedure*

The procedure for selecting the $R_S$ resistor is same as detailed in *Detailed Design Procedure*. The output of the voltage reference is used as the inverting input to the op-amp, with unity gain.

Copyright © 2000–2016, Texas Instruments Incorporated

## Typical Applications (continued)

### 9.2.6 Precision Current Sink/Source

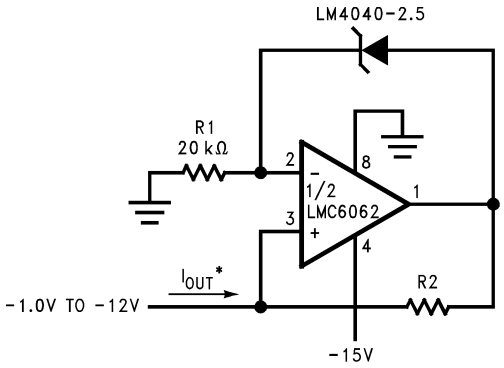

**Figure 16. Precision 1-mA Current Sink**

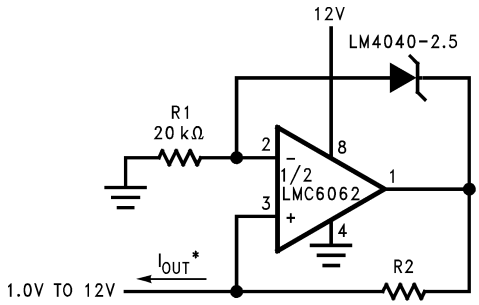

**Figure 17. Precision 1-mA Current Source**

#### *9.2.6.1 Design Requirements*

Create precision 1-mA current sink and/or 1-mA current source.

#### *9.2.6.2 Detailed Design Procedure*

Set R1 such that the current through the shunt reference, $I_R$, is greater than $I_{RMIN}$.

$I_{OUT} = V_{OUT} / R_2$ where $V_{OUT}$ is the voltage drop across the shunt reference. In this case,

$I_{OUT} = 2.5 / R_2$

Copyright © 2000–2016, Texas Instruments Incorporated

## 10 Power Supply Recommendations

While a bypass capacitor is not required on the input voltage line, TI recommends reducing noise on the input which could affect the output. A 0.1-µF ceramic capacitor or larger is recommended.

## 11 Layout

### 11.1 Layout Guidelines

Place external components as close to the device as possible. Place RS close the cathode, as well as the input bypass capacitor, if used.

### 11.2 Layout Example

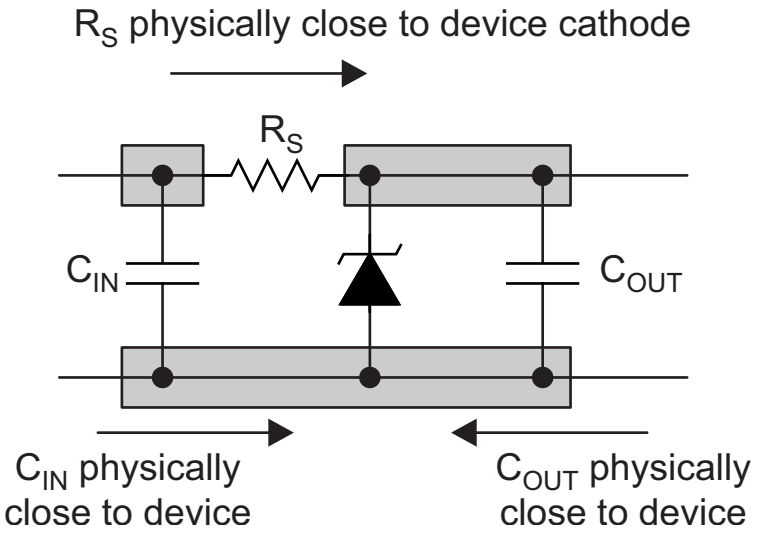

**Figure 18. Layout Diagram**

(1) The marketing status values are defined as follows:
**ACTIVE:** Product device recommended for new designs.
**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.
**OBSOLETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".
**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.
**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

**(5)** Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

**(6)** Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:**The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

**OTHER QUALIFIED VERSIONS OF LM4040-N, LM4040-N-Q1 :**

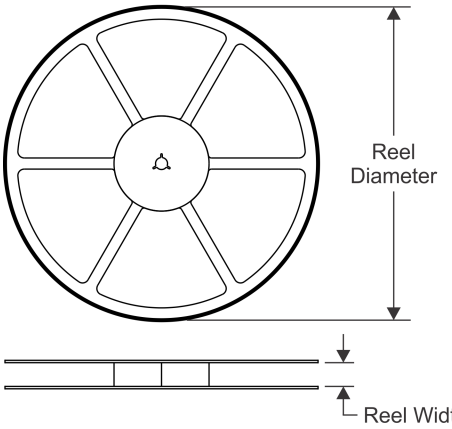
- Catalog: LM4040-N
- Automotive: LM4040-N-Q1

NOTE: Qualified Version Definitions:

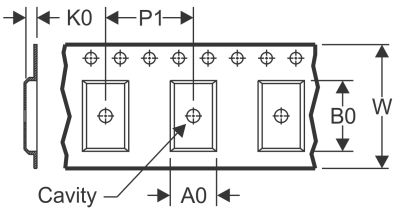
- Catalog - TI's standard catalog product
- Automotive - Q100 devices qualified for high-reliability automotive applications targeting zero defects

## TAPE AND REEL INFORMATION

REEL DIMENSIONS

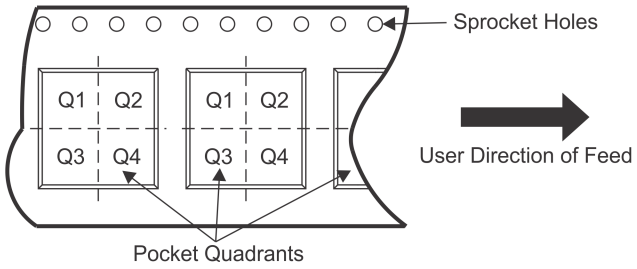


TAPE DIMENSIONS



| | |
|---|---|
| A0 | Dimension designed to accommodate the component width |
| B0 | Dimension designed to accommodate the component length |
| K0 | Dimension designed to accommodate the component thickness |
| W | Overall width of the carrier tape |
| P1 | Pitch between successive cavity centers |

QUADRANT ASSIGNMENTS FOR PIN 1 ORIENTATION IN TAPE



*All dimensions are nominal

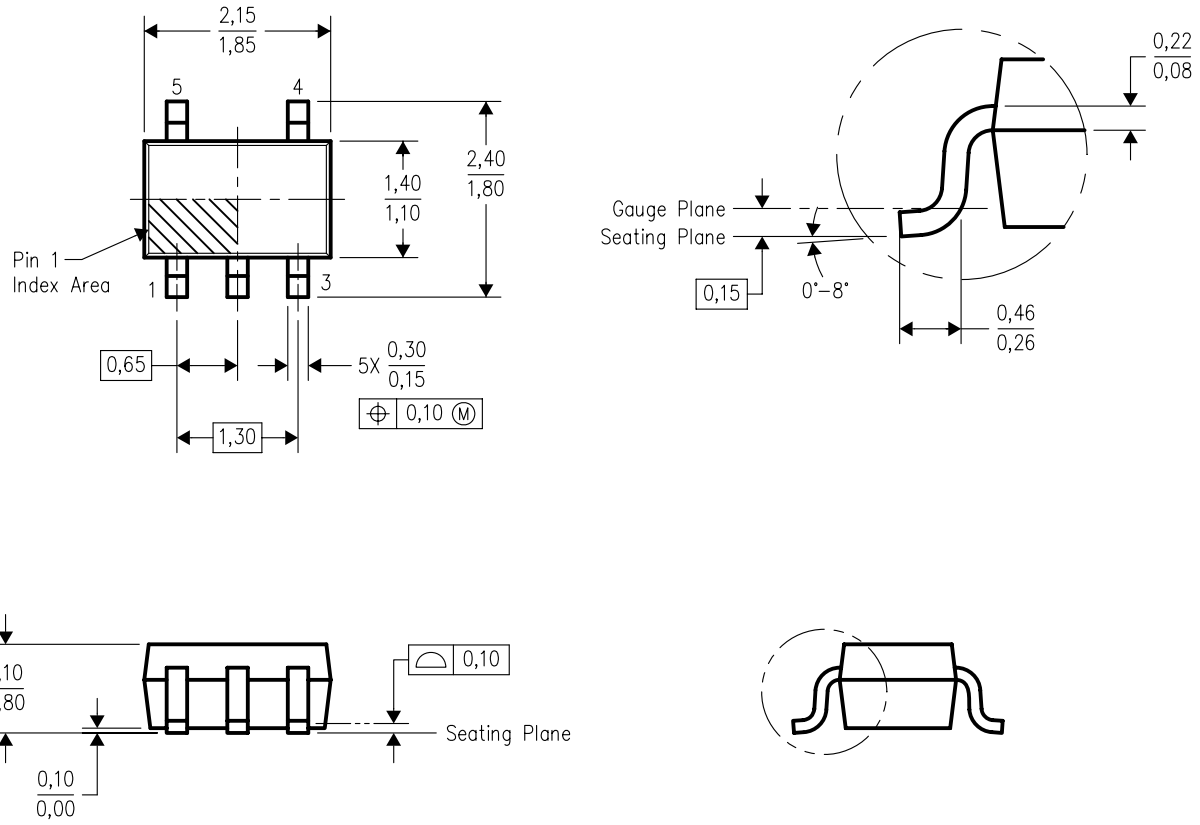
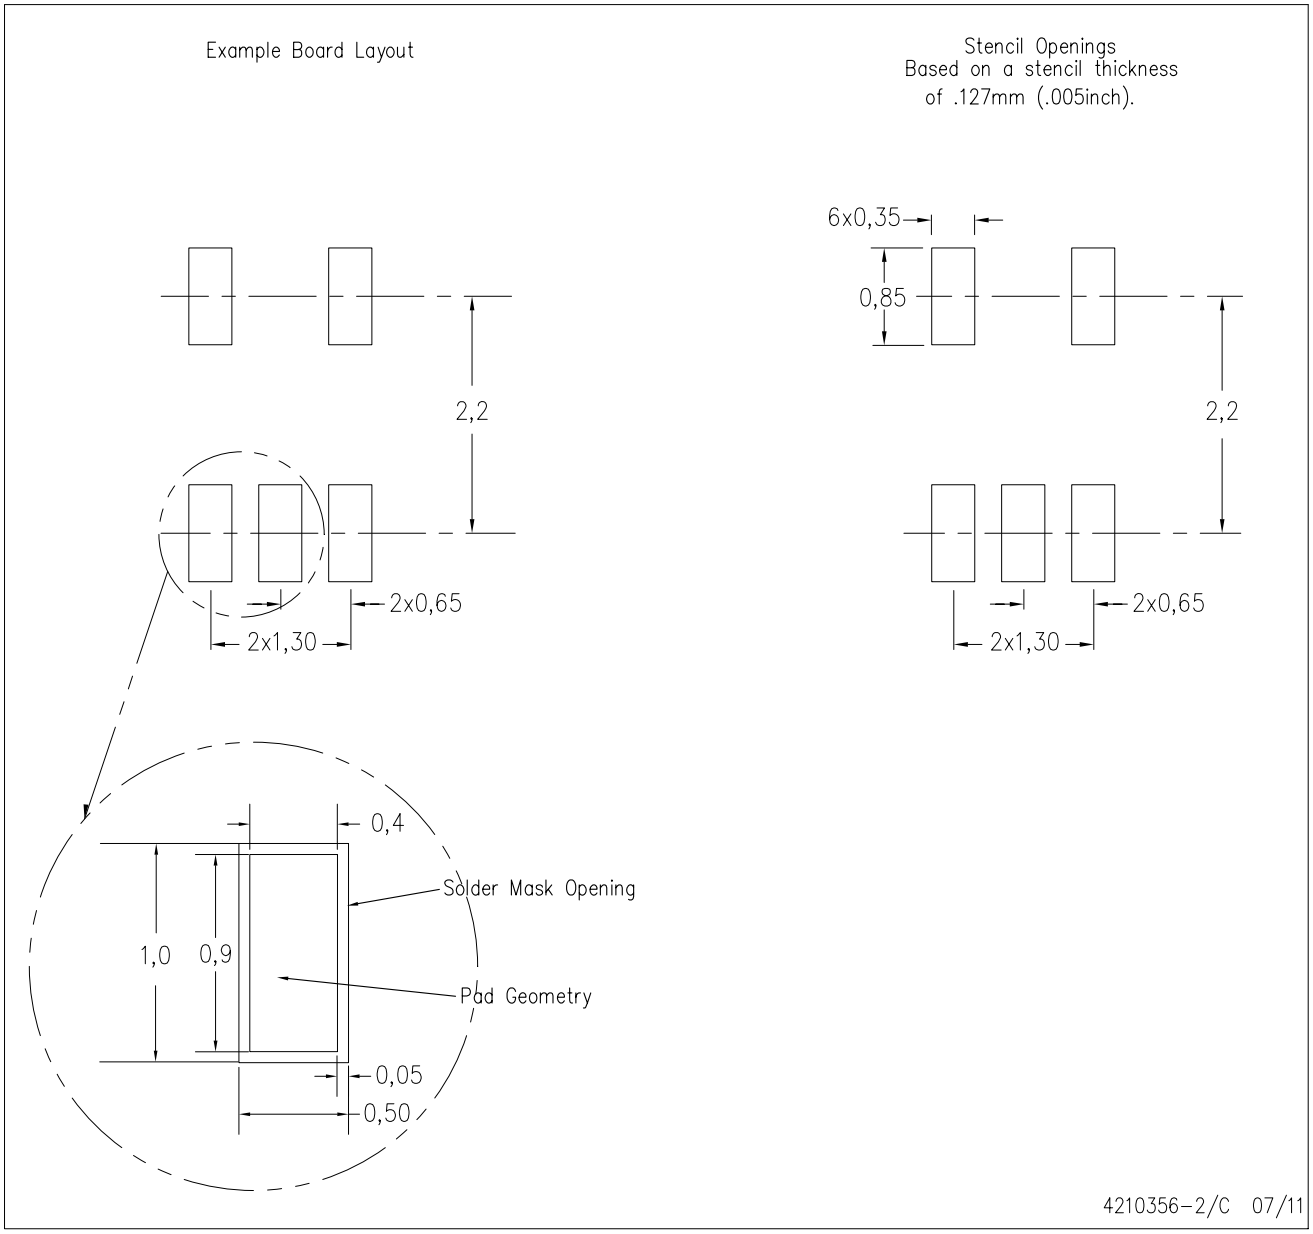
## DCK (R–PDSO–G5) PLASTIC SMALL–OUTLINE PACKAGE



4093553–3/G 01/2007

NOTES:
A. All linear dimensions are in millimeters.
B. This drawing is subject to change without notice.
C. Body dimensions do not include mold flash or protrusion. Mold flash and protrusion shall not exceed 0.15 per side.
D. Falls within JEDEC MO–203 variation AA.

DCK (R–PDSO–G5) PLASTIC SMALL OUTLINE



NOTES:
A. All linear dimensions are in millimeters.
B. This drawing is subject to change without notice.
C. Customers should place a note on the circuit board fabrication drawing not to alter the center solder mask defined pad.
D. Publication IPC–7351 is recommended for alternate designs.
E. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Example stencil design based on a 50% volumetric metal load solder paste. Refer to IPC–7525 for other stencil recommendations.

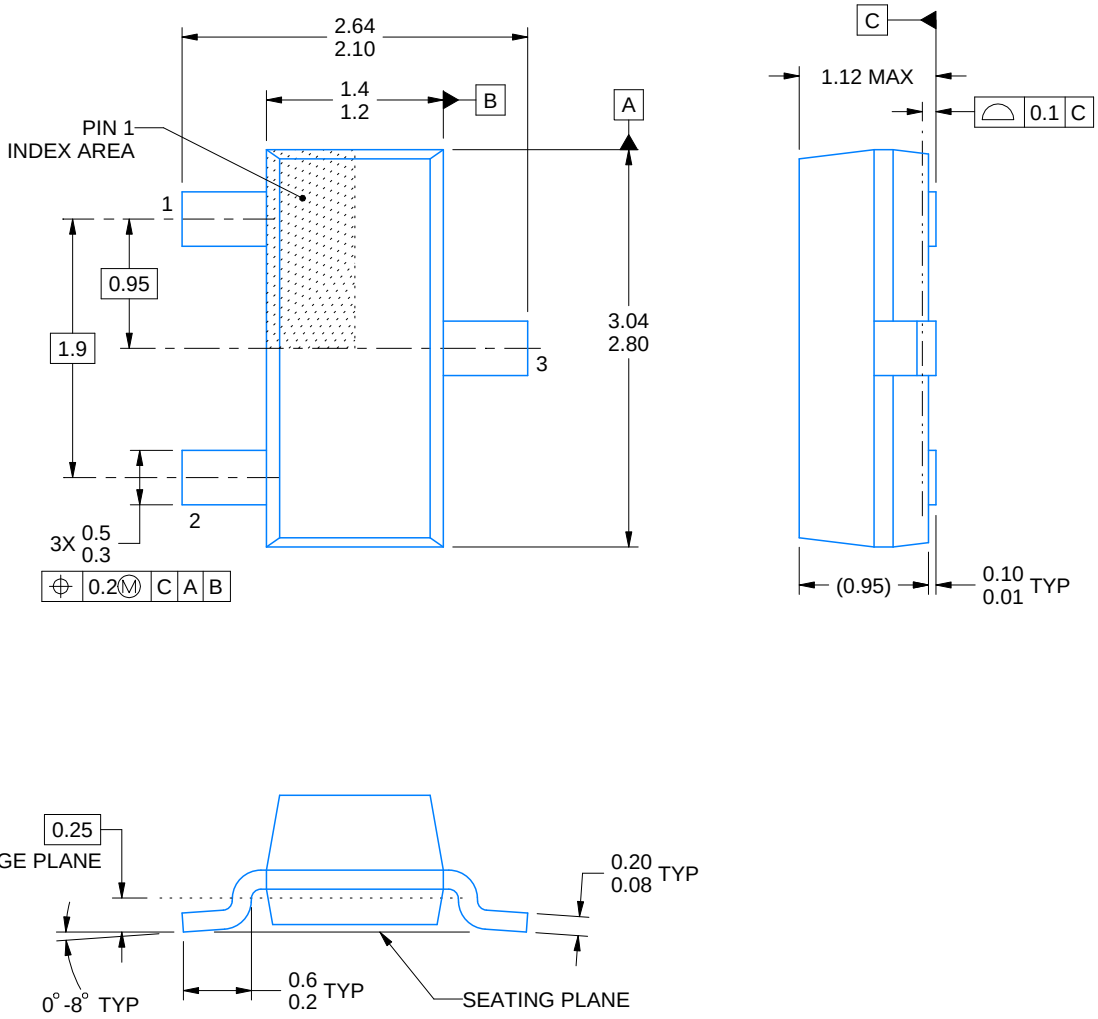
## SOT-23 - 1.12 mm max height

SMALL OUTLINE TRANSISTOR



4214838/C 04/2017

NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. Reference JEDEC registration TO-236, except minimum foot length.

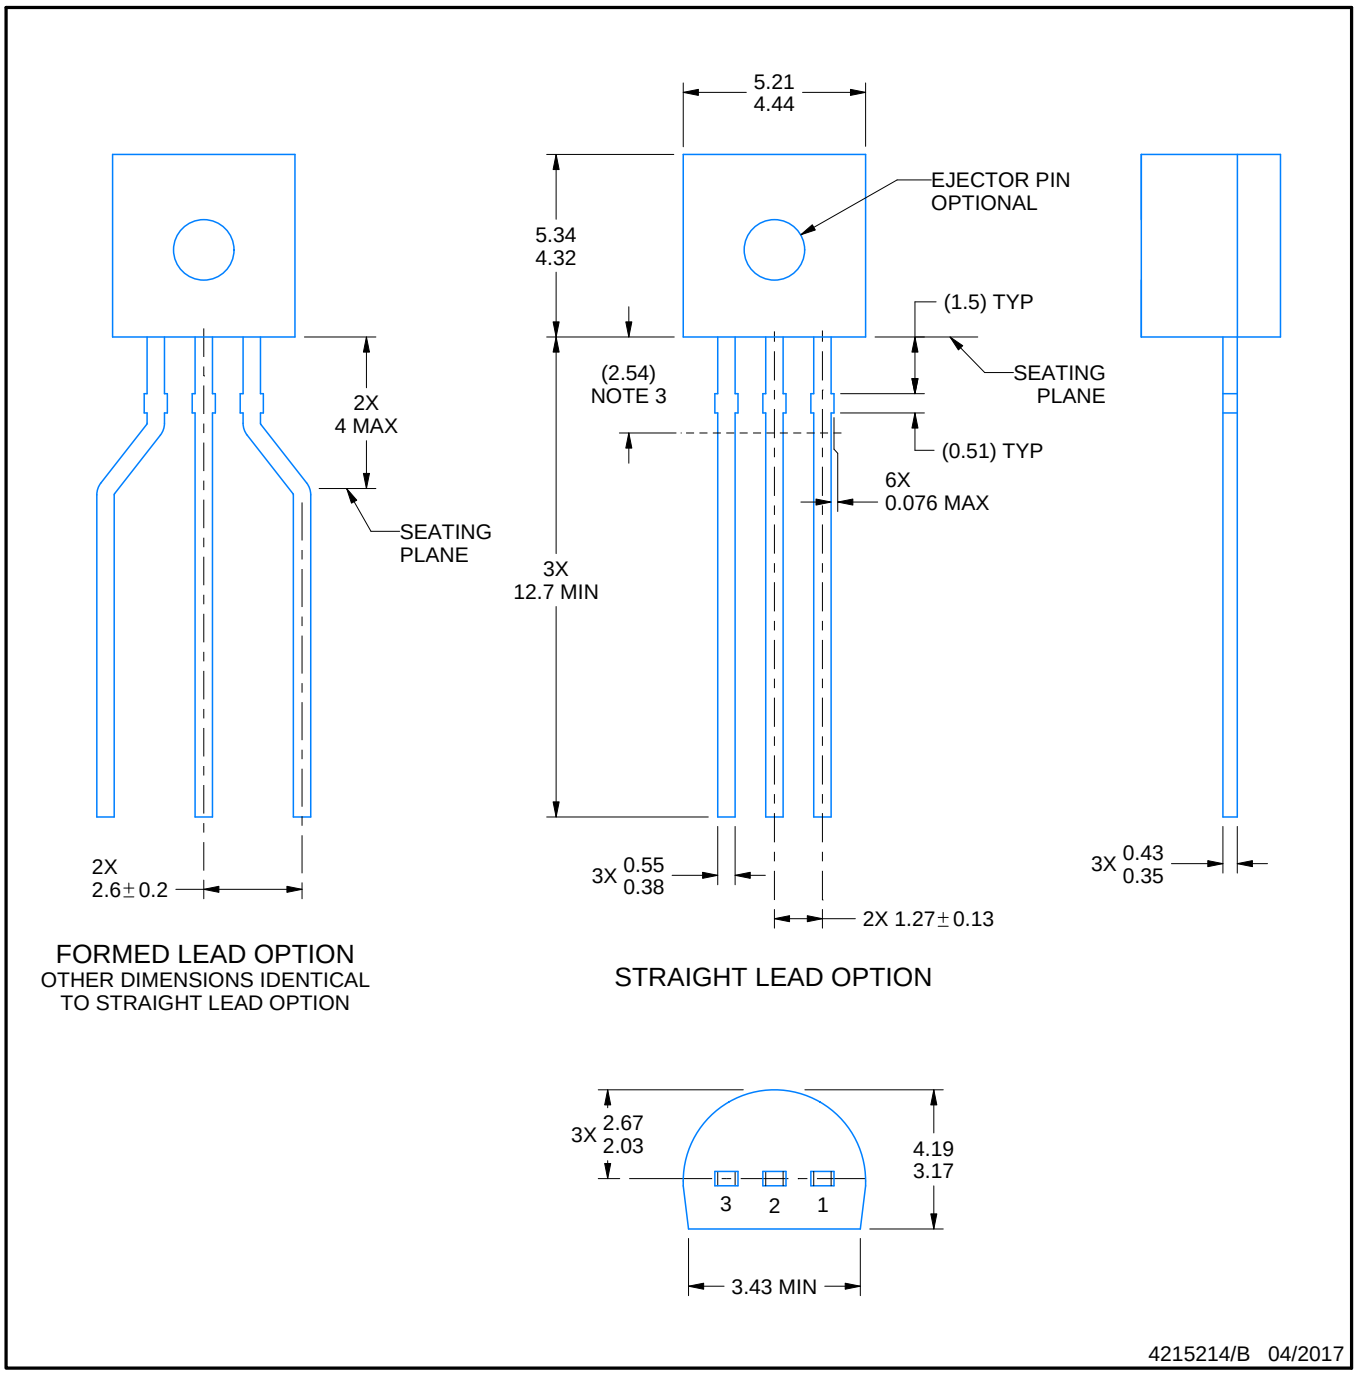
TO-92



NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. Lead dimensions are not controlled within this area.
4. Reference JEDEC TO-226, variation AA.
5. Shipping method:
   a. Straight lead option available in bulk pack only.
   b. Formed lead option available in tape and reel or ammo pack.
   c. Specific products can be offered in limited combinations of shipping medium and lead options.
   d. Consult product folder for more information on available options.
