

# THE DATASHEET OF LM49150TLX

# LM49150 Boomer® Audio Power Amplifier Series Mono Class D Audio Subsystem with Earpiece Driver and Stereo Ground Referenced Headphone Amplifiers

Check for Samples: [LM49150](#), [LM49150TLEVAL](#)

## FEATURES

- E<sup>2</sup>S Class D Amplifier
- Ground Referenced Headphone Outputs — Eliminates Output Coupling Capacitors
- I<sup>2</sup>C Volume and Mode Control
- Mono Earpiece Amplifier
- Flexible Output for Speaker and Headphone Output
- 20-Bump DSBGA Package
- Soft Enable Function
- “Click and Pop” Suppression Circuitry
- Thermal Shutdown Protection
- Low Supply Current
- Micro-Power Shutdown

## KEY SPECIFICATIONS

- Output power at V<sub>DD</sub> = 5V:
  - Speaker: R<sub>L</sub> = 8Ω BTL, THD+N ≤ 1%: 1.25W (typ)
  - Headphone: R<sub>L</sub> = 32Ω SE, THD+N ≤ 1%: 42mW (typ)
  - Earpiece: R<sub>L</sub> = 8Ω SE, THD+N ≤ 1%: 135mW (typ)
- Output power at V<sub>DD</sub> = 3.3V:
  - Speaker: R<sub>L</sub> = 8Ω BTL, THD+N ≤ 1%: 520mW (typ)
  - Headphone: R<sub>L</sub> = 32Ω BTL, THD+N ≤ 1%: 42mW (typ)
  - Earpiece: R<sub>L</sub> = 8Ω SE, THD+N ≤ 1%: 35mW (typ)
- Output Offset
  - LS Mode: 9mV (typ)
  - HP Mode: 1mV (typ)
  - Earpiece: 1mV (typ)
- Single Supply Operation (V<sub>DD</sub>): 2.7 to 5.5V
- I<sup>2</sup>C Single Supply Operation: 1.7 to 5.5V

## APPLICATIONS

- Mobile Phones
- PDAs
- Portable Electronics

## DESCRIPTION

The LM49150 is a fully integrated audio subsystem designed for portable handheld applications such as cellular phones. Part of TI's PowerWise™ product family, the LM49150 consumes very low power in the various modes of operation and still providing great audio performance. The LM49150 combines a 1.25W mono E<sup>2</sup>S (Enhanced Emission Suppression) class D amplifier, 135mW Class AB earpiece amplifier, 42mW/channel stereo ground reference headphone amplifiers, volume control, and mixing circuitry into a single device.

The filterless class D amplifier delivers 1.25W into an 8Ω load with <1% THD+N with a 5V supply. The E<sup>2</sup>S class D amplifier features a patented, ultra low EMI PWM architecture that significantly reduces RF emissions while preserving audio quality. The 42mW/channel headphone drivers feature TI's ground referenced architecture that creates a ground-referenced output from a single supply, eliminating the need for bulky and expensive DC-blocking capacitors, saving space and minimizing cost.

The LM49150 features a fully differential mono input, and two single-ended stereo inputs. The three inputs can be mixed/multiplexed to either the speaker or headphone amplifiers. Each input channel has an independent, 32-step digital volume control. The headphone output stage features an additional, 8-step gain control, while the speaker output stage has a selectable 6dB or 12dB gain. The mixer, volume control and device mode select are controlled through an I<sup>2</sup>C compatible serial interface.

The LM49150's superior click and pop suppression eliminates audible transients on power-up/down and during shutdown. The LM49150 is available in a ultra-small 20-bump DSBGA package (2.225mm X 2.644mm).

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

PowerWise is a trademark of Texas Instruments.

All other trademarks are the property of their respective owners.

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

Typical Application

(Bump Side Down)  
See Package Number YZR0020KGA**

**BUMP DESCRIPTIONS**

Bump	Name	Description
A1	I <sup>2</sup> C V <sub>DD</sub>	I <sup>2</sup> C Power Supply
A2	GND	Ground
A3	LSOUT-	Inverting Loudspeaker Output
A4	LSOUT+	Non-Inverting Loudspeaker Output
B1	V <sub>DD</sub>	Analog Power Supply
B2	SDA	I <sup>2</sup> C Data Input
B3	SCL	I <sup>2</sup> C Clock Input
B4	LSV <sub>DD</sub>	Loudspeaker Power Supply
C1	INL	Left Channel Input
C2	INR	Right Channel Input
C3	BYPASS	Mid-Rail Supply Bypass
C4	CPV <sub>SS</sub>	Charge Pump Output
D1	INM-	Mono Channel Inverting Input
D2	V <sub>O(LDO)</sub>	Internal LDO Output
D3	CPN	Charge Pump Flying Capacitor - Negative Terminal
D4	CPP	Charge Pump Flying Capacitor - Positive Terminal
E1	INM+	Mono Channel Non-Inverting Input
E2	HPR	Right Channel Headphone Amplifier Output
E3	HPL	Left Channel Headphone Amplifier Output
E4	CPGND	Charge Pump Ground

**Absolute Maximum Ratings**<sup>(1)(2)(3)</sup>

Supply Voltage <sup>(1)</sup>		6.0V
Storage Temperature		–65°C to +150°C
Input Voltage		–0.3 to V <sub>DD</sub> +0.3
Power Dissipation <sup>(4)</sup>		Internally Limited
ESD Rating <sup>(5)</sup>		2.0kV
ESD Rating <sup>(6)</sup>		200V
Junction Temperature		150°C
Soldering Information	See AN-1112 “Micro SMD Wafer Level Chip Scale Package” (Literature Number <a href="#">SNVA009</a> )	
Thermal Resistance	$\theta_{JA}$ (typ) - YZR0020KGA	46.1°C/W

- (1) “*Absolute Maximum Ratings*” indicate limits beyond which damage to the device may occur, including inoperability and degradation of device reliability and/or performance. Functional operation of the device and/or non-degradation at the *Absolute Maximum Ratings* or other conditions beyond those indicated in the *Recommended Operating Conditions* is not implied. The *Recommended Operating Conditions* indicate conditions at which the device is functional and the device should not be operated beyond such conditions. All voltages are measured with respect to the ground pin, unless otherwise specified.
- (2) The *Electrical Characteristics* tables list ensured specifications under the listed *Recommended Operating Conditions* except as otherwise modified or specified by the *Electrical Characteristics Conditions* and/or Notes. Typical specifications are estimations only and are not ensured.
- (3) If Military/Aerospace specified devices are required, please contact the TI Sales Office/ Distributors for availability and specifications.
- (4) The maximum power dissipation must be derated at elevated temperatures and is dictated by T<sub>JMAX</sub>,  $\theta_{JA}$ , and the ambient temperature, T<sub>A</sub>. The maximum allowable power dissipation is P<sub>DMAX</sub> = (T<sub>JMAX</sub> - T<sub>A</sub>) /  $\theta_{JA}$  or the number given in *Absolute Maximum Ratings*, whichever.
- (5) Human body model, applicable std. JESD22-A114C.
- (6) Machine model, applicable std. JESD22-A115-A.

**Operating Ratings**

Temperature Range	–40°C to 85°C
Supply Voltage	2.7V ≤ V <sub>DD</sub> ≤ 5.5V
Supply Voltage (I <sup>2</sup> C)	1.7V ≤ I <sup>2</sup> CV <sub>DD</sub> ≤ 5.5V

**Electrical Characteristics 3.3V**<sup>(1)</sup>

The following specifications apply for V<sub>DD</sub> = LSV<sub>DD</sub> = 3.3V, A<sub>V</sub> = 0dB, Loudspeaker R<sub>L</sub> = 15μH+8Ω+15μH, Earpiece R<sub>L</sub> = 8Ω, f = 1kHz, unless otherwise specified. Limits apply for T<sub>A</sub> = 25°C. LS = Loudspeaker, HP = Headphone, EP = Earpiece.

Symbol	Parameter	Conditions	LM49150		Units (Limits)
			Typical <sup>(2)</sup>	Limits <sup>(3)</sup>	
I <sub>DD</sub>	Supply Current	V <sub>IN</sub> = 0, No Load			
		LS mode 1	3.7	5	mA (max)
		HP mode 8	4.7	6.7	mA (max)
		EP Bypass mode	0.8	1.2	mA (max)
		LS + HP mode 5 and mode 10	7	9.5	mA (max)
		LS mode 1, GAMP_SD = 1	3	4	mA (max)
		HP mode 8, GAMP_SD = 1	4.3	6.1	mA (max)
I <sub>SD</sub>	Shutdown Current		0.04	1	μA (max)
V <sub>OS</sub>	Output Offset Voltage	V <sub>IN</sub> = 0V, LS, R <sub>L</sub> = 8Ω LS Gain = 6dB, Stereo mode 10	9	40	mV (max)
		V <sub>IN</sub> = 0V, HP, R <sub>L</sub> = 32Ω Ground Referenced, Stereo mode 10	1	5	mV (max)
		V <sub>IN</sub> = 0V, EP Bypass only, R <sub>L</sub> = 8Ω	0.8	5	mV (max)

- (1) The *Electrical Characteristics* tables list ensured specifications under the listed *Recommended Operating Conditions* except as otherwise modified or specified by the *Electrical Characteristics Conditions* and/or Notes. Typical specifications are estimations only and are not ensured.
- (2) Typical values represent most likely parametric norms at T<sub>A</sub> = +25°C, and at the *Recommended Operation Conditions* at the time of product characterization and are not specified.
- (3) Datasheet min/max specification limits are ensured by test or statistical analysis.

**Electrical Characteristics 3.3V<sup>(1)</sup> (continued)**

The following specifications apply for  $V_{DD} = LSV_{DD} = 3.3V$ ,  $A_V = 0dB$ , Loudspeaker  $R_L = 15\mu H + 8\Omega + 15\mu H$ , Earpiece  $R_L = 8\Omega$ ,  $f = 1kHz$ , unless otherwise specified. Limits apply for  $T_A = 25C$ . LS = Loudspeaker, HP = Headphone, EP = Earpiece.

Symbol	Parameter	Conditions	LM49150		Units (Limits)
			Typical <sup>(2)</sup>	Limits <sup>(3)</sup>	
P <sub>O</sub>	Output Power	LS mode 1, THD+N = 1%, f = 1kHz LS Gain = 6dB, R <sub>L</sub> = 4Ω	845		mW
		LS mode 1, THD+N = 1%, f = 1kHz LS Gain = 6dB, R <sub>L</sub> = 8Ω	520	450	mW (min)
		HP mode 8, THD+N = 1%, f = 1kHz HP Attenuation = 0dB, R <sub>L</sub> = 16Ω	42		mW
		HP mode 8, THD+N = 1%, f = 1kHz HP Attenuation = 0dB, R <sub>L</sub> = 32Ω	43	39	mW (min)

## APPLICATION INFORMATION

### I<sup>2</sup>C COMPATIBLE INTERFACE

The LM49150 is controlled through an I<sup>2</sup>C compatible serial interface that consists of a serial data line (SDA) and a serial clock (SCL). The clock line is uni-directional. The data line is bi-directional (open drain). The LM49150 and the master can communicate at clock rates up to 400kHz. Figure 37 shows the I<sup>2</sup>C interface timing diagram. Data on the SDA line must be stable during the HIGH period of SCL. The LM49150 is a transmit/receive slave-only device, reliant upon the master to generate the SCL signal. Each transmission sequence is framed by a START condition and a STOP condition (Figure 38). Each data word, device address and data, transmitted over the bus is 8 bits long and is always followed by an acknowledge pulse (Figure 39). The LM49150 device address is 11111000.

### I<sup>2</sup>C INTERFACE POWER SUPPLY PIN (I<sup>2</sup>CV<sub>DD</sub>)

The LM49150's I<sup>2</sup>C interface is powered up through the I<sup>2</sup>CV<sub>DD</sub> pin. The LM49150's I<sup>2</sup>C interface operates at a voltage level set by the I<sup>2</sup>CV<sub>DD</sub> pin which can be set independent to that of the main power supply pin V<sub>DD</sub>. This is ideal whenever logic levels for the I<sup>2</sup>C interface are dictated by a microcontroller or microprocessor that is operating at a lower supply voltage than the main battery of a portable system.

### I<sup>2</sup>C BUS FORMAT

The I<sup>2</sup>C bus format is shown in Figure 39. The START signal, the transition of SDA from HIGH to LOW while SCL is HIGH, is generated, alerting all devices on the bus that a device address is being written to the bus.

The 7-bit device address is written to the bus, most significant bit (MSB) first, followed by the R/W bit. R/W = 0 indicates the master is writing to the slave device, R/W = 1 indicates the master wants to read data from the slave device. Set R/W = 0; the LM49150 is a WRITE-ONLY device and will not respond to the R/W = 1. The data is latched in on the rising edge of the clock. Each address bit must be stable while SCL is HIGH. After the last address bit is transmitted, the master device releases SDA, during which time, an acknowledge clock pulse is generated by the slave device. If the LM49150 receives the correct address, the device pulls the SDA line low, generating an acknowledge bit (ACK).

Once the master device registers the ACK bit, the 8-bit register data word is sent. Each data bit should be stable while SCL is HIGH. After the 8-bit register data word is sent, the LM49150 sends another ACK bit. Following the acknowledgement of the register data word, the master issues a STOP bit, allowing SDA to go high while SCL is high.

## SHUTDOWN FUNCTION

The LM49150 features the following shutdown controls.

Bit B4 (GAMP\_SD) of the SHUTDOWN CONTROL register controls the gain amplifiers. When GAMP\_SD = 1, it disables the gain amplifiers that are not in use. For example, in Modes 1, 4 and 5, the Mono inputs are in use, so the Left and Right input gain amplifiers are disabled, causing the I<sub>DD</sub> to be minimized.

Bit B0 (PWR\_On) of the SHUTDOWN CONTROL register is the global shutdown control for the entire device. Set PWR\_On = 0 for normal operation. PWR\_On = 1 overrides any other shutdown control bit.

## OUTPUT MODE CONTROL

In the LM49150 OUTPUT MODE CONTROL register (Table 4), Bit B5 (EP Bypass) controls the operation of the Earpiece Bypass path. If EP Bypass = 0, it would act under normal output mode operation set by bits B3, B2, B1, and B0. If EP Bypass = 1, it overrides the B3, B2, B1, and B0 Bits and enables the Receiver Bypass path, a class AB amplifier, to the speaker output.

Bit B4 (HPR\_SD) of the OUPUT MODE CONTROL register controls the right headphone shutdown. If HPR\_SD = 1, the right headphone output is disabled.

## DIFFERENTIAL AMPLIFIER EXPLANATION

The LM49150 features a differential input stage, which offers improved noise rejection compared to a single-ended input amplifier. Because a differential input amplifier amplifies the difference between the two input signals, any component common to both signals is cancelled. An additional benefit of the differential input structure is the possible elimination of the DC input blocking capacitors. Since the DC component is common to both inputs, and thus cancelled by the amplifier, the LM49150 can be used without input coupling capacitors when configured with a differential input signal.

## SINGLE-ENDED INPUT CONFIGURATION

The left and right stereo inputs of the LM49150 are configured for single-ended sources (see Figure 1).

## INPUT CAPACITOR SELECTION

Input capacitors may be required for some applications, or when the audio source is single-ended. Input capacitors block the DC component of the audio signal, eliminating any conflict between the DC component of the audio source and the bias voltage of the LM49150. The input capacitors create a high-pass filter with the input resistors R<sub>IN</sub>. The -3dB point of the high-pass filter is found using Equation 1 below.

$$f = 1 / 2\pi R_{IN} C_{IN} \quad (\text{Hz})$$

Where

- value of R<sub>IN</sub> is given in the [Electrical Characteristics Table](#). (1)

High-pass filtering the audio signal helps protect the speakers. When the LM49150 is using a single-ended source, power supply noise on the ground is seen as an input signal. Setting the high-pass filter point above the power supply noise frequencies, 217Hz in a GSM phone, for example, filters out the noise such that it is not amplified and heard on the output. Capacitors with a tolerance of 10% or better are recommended for impedance matching and improved CMRR and PSRR.

## INPUT MIXER/MULTIPLEXER

The LM49150 includes a comprehensive mixer multiplexer controlled through the I<sup>2</sup>C interface. The mixer/multiplexer allows any input combination to appear on any output of LM49150. Multiple input paths can be selected simultaneously. Under these conditions, the selected inputs are mixed together and output on the selected channel. [Table 5](#) shows how the input signals are mixed together for each possible input selection.

## CLASS D AMPLIFIER

The LM49150 features a high-efficiency, filterless, class D amplifier, which features a filterless modulation scheme. When there is no input signal applied, the output switches between V<sub>DD</sub> and GND at a 50% duty cycle. Since the outputs of the LM49150 class D amplifier are differential and in phase, the result is zero net voltage across the speaker and no load current during the ideal state, thus conserving power. The switching frequency of each output is 300kHz.

When an input signal is applied, the duty cycle (pulse width) changes. For increasing output voltages, the duty cycle of one output increases while the duty cycle of the output decreases. For decreasing output voltages, the converse occurs. The difference between the two pulse widths yields the differential output voltage across the load.

## SPREAD SPECTRUM

The LM49150 features a filterless spread spectrum modulation scheme. The switching frequency varies by +/- 30% about a 300kHz center frequency, reducing the wideband spectral content, reducing EMI emissions radiated by the speaker and associated cables and traces. When a fixed frequency class D exhibits large amounts of spectral energy at multiples of switching frequency, the spread spectrum architecture of the LM49150 spreads that energy over a larger bandwidth. The cycle-to-cycle variation of the switching period does not affect the audio reproduction, efficiency, or PSRR. To enable spread spectrum, set the spread spectrum bit, B5 = 1 of the SHUTDOWN CONTROL register (see [Table 3](#)).

## ENHANCED EMISSIONS SUPPRESSION (E<sup>2</sup>S)

The LM49150 features TI's patented E<sup>2</sup>S system that reduces EMI, while maintaining high quality audio reproduction and efficiency. The LM49150 features Edge Rate Control (ERC) that greatly reduces the high frequency components of the output square waves by controlling the output rise and fall times, slowing the transitions to reduce RF emissions, while optimizing THD+N and efficiency performance.

## LDO GENERAL INFORMATION

The LM49150 has different supplies for each portion of the device, allowing for the optimum combination of headroom, power dissipation and noise immunity. The speaker amplifiers are powered from LSV<sub>DD</sub>. The ground reference headphone amplifiers are powered from the internal LDO. The separate power supplies allow the loudspeaker amplifier to operate from a higher voltage for maximum headroom, while the headphone amplifiers operate from a lower voltage, improving power dissipation.

## GROUND REFERENCED HEADPHONE AMPLIFIER

The LM49150 features a low noise inverting charge pump that generates an internal negative supply voltage. This allows the headphone outputs to be biased about GND instead of a nominal DC voltage, like traditional headphone amplifiers. Because there is no DC component, the large DC blocking capacitors (typically 220μF) are not necessary. The coupling capacitors are replaced by two small ceramic charge pump capacitors, saving board space and cost. Eliminating the output coupling capacitors also improves low frequency response. In traditional headphone amplifiers, the headphone impedance and the output capacitor from a high-pass filter that not only blocks the DC component of the output, but also attenuates low frequencies, impacting the bass response. Because the LM49150 does not require the output coupling capacitors, the low frequency response of the device is not degraded by external components. In addition to eliminating the output coupling capacitors, the ground referenced output nearly doubles the available dynamic range of the LM49250 headphone amplifiers when compared to a traditional headphone amplifier operating from the same supply voltage.

## CHARGE PUMP CAPACITOR SELECTION

Use low ESR ceramic capacitors (less than 100mΩ) for optimum performance.

## CHARGE PUMP FLYING CAPACITOR (C1)

The flying capacitor (C1), see [Figure 1](#), affects the load regulation and output impedance of the charge pump. A C1 value that is too low results in a loss of current drive, leading to a loss of amplifier headroom. A higher valued C1 improves load regulation and lowers charge pump output impedance to an extent. Above 2.2 $\mu$ F, the  $R_{DS(ON)}$  of the charge pump switches and the ESR of C1 and Cs5 dominate the output impedance. A lower value capacitor can be used in systems with low maximum output power requirements.

## CHARGE PUMP HOLD CAPACITOR (Cs5)

The value and ESR of the hold capacitor (Cs5) directly affects the ripple on  $CPV_{SS}$ . Increasing the value of Cs5 reduces output ripple. Decreasing the ESR of Cs5 reduces both output ripple and charge pump output impedance. A lower value capacitor can be used in systems with low maximum output power requirements.

## LM49150 Demoboard Bill Of Materials

## Layout Guidelines

Minimize trace impedance of the power, ground and all output traces for optimum performance. Voltage loss due to trace resistance between the LM49150 and the load results in decreased output power and efficiency. Trace resistance between the power supply and the GND of the LM49150 has the same effect as a poorly regulated supply, increased ripple and reduced peak output power. Use wide traces, for power-supply inputs and amplifier outputs to minimize losses due to trace resistance, as well as providing heat dissipation from the device. Proper grounding improves audio performance, minimizes crosstalk between channels and prevents switching noise from interfering with audio signal. Use of power and ground planes is recommended.

The following recommendations should be considered when laying out the different grounds of the LM49150. Refer to the Demo Board Schematic for the corresponding component designators. Bypass capacitors for  $AV_{DD}$  (CS7),  $LSV_{DD}$  (CS1, CS2),  $V_{O(LDO)}$  (CS3, CS4) should be grounded to the GND pin via a ground plane. Bypass capacitor for  $CPV_{SS}$  (CS5) should be grounded via a wide trace or a ground plane to the CPGND pin. The headphone grounds should be connected to the GND via a separate trace also. This will help prevent noise from the charge pump from feeding into the power supplies and the output.

Place all digital components and digital signal traces as far as possible from analog components and traces. Do not run digital and analog traces in parallel on the same PCB layer.

**REVISION HISTORY**

<b>Rev</b>	<b>Date</b>	<b>Description</b>
1.0	08/27/08	Initial release.
1.01	09/09/08	Edited Table 6.
1.02	03/04/09	Added the Layout Guidelines section.
C	05/03/13	Changed layout of National Data Sheet to TI format.

**PACKAGING INFORMATION**

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead/Ball Finish (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
LM49150TL/NOPB	ACTIVE	DSBGA	YZR	20	250	Green (RoHS & no Sb/Br)	SNAGCU	Level-1-260C-UNLIM	-40 to 85	GK7	<b>Samples</b>

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

## IMPORTANT NOTICE

Texas Instruments Incorporated (TI) reserves the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete.

TI's published terms of sale for semiconductor products (<http://www.ti.com/sc/docs/stdterms.htm>) apply to the sale of packaged integrated circuit products that TI has qualified and released to market. Additional terms may apply to the use or sale of other types of TI products and services.

Reproduction of significant portions of TI information in TI data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such reproduced documentation. Information of third parties may be subject to additional restrictions. Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyers and others who are developing systems that incorporate TI products (collectively, "Designers") understand and agree that Designers remain responsible for using their independent analysis, evaluation and judgment in designing their applications and that Designers have full and exclusive responsibility to assure the safety of Designers' applications and compliance of their applications (and of all TI products used in or for Designers' applications) with all applicable regulations, laws and other applicable requirements. Designer represents that, with respect to their applications, Designer has all the necessary expertise to create and implement safeguards that (1) anticipate dangerous consequences of failures, (2) monitor failures and their consequences, and (3) lessen the likelihood of failures that might cause harm and take appropriate actions. Designer agrees that prior to using or distributing any applications that include TI products, Designer will thoroughly test such applications and the functionality of such TI products as used in such applications.

TI's provision of technical, application or other design advice, quality characterization, reliability data or other services or information, including, but not limited to, reference designs and materials relating to evaluation modules, (collectively, "TI Resources") are intended to assist designers who are developing applications that incorporate TI products; by downloading, accessing or using TI Resources in any way, Designer (individually or, if Designer is acting on behalf of a company, Designer's company) agrees to use any particular TI Resource solely for this purpose and subject to the terms of this Notice.

TI's provision of TI Resources does not expand or otherwise alter TI's applicable published warranties or warranty disclaimers for TI products, and no additional obligations or liabilities arise from TI providing such TI Resources. TI reserves the right to make corrections, enhancements, improvements and other changes to its TI Resources. TI has not conducted any testing other than that specifically described in the published documentation for a particular TI Resource.

Designer is authorized to use, copy and modify any individual TI Resource only in connection with the development of applications that include the TI product(s) identified in such TI Resource. NO OTHER LICENSE, EXPRESS OR IMPLIED, BY ESTOPPEL OR OTHERWISE TO ANY OTHER TI INTELLECTUAL PROPERTY RIGHT, AND NO LICENSE TO ANY TECHNOLOGY OR INTELLECTUAL PROPERTY RIGHT OF TI OR ANY THIRD PARTY IS GRANTED HEREIN, including but not limited to any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information regarding or referencing third-party products or services does not constitute a license to use such products or services, or a warranty or endorsement thereof. Use of TI Resources may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

TI RESOURCES ARE PROVIDED "AS IS" AND WITH ALL FAULTS. TI DISCLAIMS ALL OTHER WARRANTIES OR REPRESENTATIONS, EXPRESS OR IMPLIED, REGARDING RESOURCES OR USE THEREOF, INCLUDING BUT NOT LIMITED TO ACCURACY OR COMPLETENESS, TITLE, ANY EPIDEMIC FAILURE WARRANTY AND ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, AND NON-INFRINGEMENT OF ANY THIRD PARTY INTELLECTUAL PROPERTY RIGHTS. TI SHALL NOT BE LIABLE FOR AND SHALL NOT DEFEND OR INDEMNIFY DESIGNER AGAINST ANY CLAIM, INCLUDING BUT NOT LIMITED TO ANY INFRINGEMENT CLAIM THAT RELATES TO OR IS BASED ON ANY COMBINATION OF PRODUCTS EVEN IF DESCRIBED IN TI RESOURCES OR OTHERWISE. IN NO EVENT SHALL TI BE LIABLE FOR ANY ACTUAL, DIRECT, SPECIAL, COLLATERAL, INDIRECT, PUNITIVE, INCIDENTAL, CONSEQUENTIAL OR EXEMPLARY DAMAGES IN CONNECTION WITH OR ARISING OUT OF TI RESOURCES OR USE THEREOF, AND REGARDLESS OF WHETHER TI HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

Unless TI has explicitly designated an individual product as meeting the requirements of a particular industry standard (e.g., ISO/TS 16949 and ISO 26262), TI is not responsible for any failure to meet such industry standard requirements.

Where TI specifically promotes products as facilitating functional safety or as compliant with industry functional safety standards, such products are intended to help enable customers to design and create their own applications that meet applicable functional safety standards and requirements. Using products in an application does not by itself establish any safety features in the application. Designers must ensure compliance with safety-related requirements and standards applicable to their applications. Designer may not use any TI products in life-critical medical equipment unless authorized officers of the parties have executed a special contract specifically governing such use. Life-critical medical equipment is medical equipment where failure of such equipment would cause serious bodily injury or death (e.g., life support, pacemakers, defibrillators, heart pumps, neurostimulators, and implantables). Such equipment includes, without limitation, all medical devices identified by the U.S. Food and Drug Administration as Class III devices and equivalent classifications outside the U.S.

TI may expressly designate certain products as completing a particular qualification (e.g., Q100, Military Grade, or Enhanced Product). Designers agree that it has the necessary expertise to select the product with the appropriate qualification designation for their applications and that proper product selection is at Designers' own risk. Designers are solely responsible for compliance with all legal and regulatory requirements in connection with such selection.

Designer will fully indemnify TI and its representatives against any damages, costs, losses, and/or liabilities arising out of Designer's non-compliance with the terms and provisions of this Notice.
