

**THE DATASHEET OF  
LM810M3-4.38/NOPB**

## LM809/LM810 3-Pin Microprocessor Reset Circuits

### 1 Features

- Precision Monitoring of Supply Voltages
  - Available Threshold Options: 2.63 V, 2.93 V, 3.08 V, 4.38 V, 4.63 V
- Superior Upgrade to MAX809 and MAX810
- Fully Specified Over Temperature
- 140-ms Minimum Power-On Reset Pulse Width, 240-ms Typical
  - Active-Low  $\overline{\text{RESET}}$  Output (LM809)
  - Active-High RESET Output (LM810)
- Ensured RESET Output Valid for  $V_{CC} \geq 1 \text{ V}$
- Low Supply Current, 15- $\mu\text{A}$  Typical
- Power Supply Transient Immunity

### 2 Applications

- Factory Automation
- Building Automation
- Programmable Logic Control
- Renewable Energy
- Microprocessor Systems
- Computers
- Controllers
- Intelligent Instruments
- Portable/Battery-Powered Equipment
- Automotive

### 3 Description

The LM809 and LM810 microprocessors supervisory circuits can be used to monitor the power supplies in microprocessor and digital systems. They provide a reset to the microprocessor during power-up, power-down and brown-out conditions.

The function of the LM809 and LM810 are to monitor the  $V_{CC}$  supply voltage, and assert a reset signal whenever this voltage declines below the factory-programmed reset threshold. The reset signal remains asserted for 240 ms after  $V_{CC}$  rises above the threshold. The LM809 has an active-low  $\overline{\text{RESET}}$  output, while the LM810 has an active-high RESET output.

Seven standard reset voltage options are available, suitable for monitoring 5-V, 3.3-V, and 3-V supply voltages.

With a low supply current of only 15  $\mu\text{A}$ , the LM809 and LM810 are ideal for use in portable equipment.

#### Device Information<sup>(1)</sup>

PART NUMBER	PACKAGE	BODY SIZE (NOM)
LM809, LM810	SOT-23 (3)	2.92 mm x 1.30 mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

#### Typical Application for Microprocessor Reset Circuit

## 5 Pin Configuration and Functions

### Pin Functions

NAME	PIN NO.		I/O	DESCRIPTION
	LM809	LM810		
	$\overline{\text{RESET}}$	2		
RESET	—	2	O	Active-high output. RESET remains high while $V_{CC}$ is below the reset threshold, and for 240 ms after $V_{CC}$ rises above the reset threshold.
$V_{CC}$	3	3	I	Supply voltage
GND	1	1	—	Ground reference

## 6 Specifications

### 6.1 Absolute Maximum Ratings

 see <sup>(1)(2)</sup>

		MIN	MAX	UNIT
Input supply voltage	$V_{CC}$	-0.3	6	V
Output voltage	RESET, $\overline{\text{RESET}}$	-0.3	$V_{CC} + 0.3$	V
Input current	$V_{CC}$		20	mA
Output current	RESET, $\overline{\text{RESET}}$		20	mA
Rate of rise	$V_{CC}$		100	V/ $\mu$ s
Continuous power dissipation			320	mW
Lead temperature (soldering, 10 s)			300	$^{\circ}$ C
Ambient temperature range, $T_A$		-40	105	$^{\circ}$ C
Maximum junction temperature, $T_{J(\text{MAX})}$			125	$^{\circ}$ C
Storage temperature, $T_{\text{stg}}$		-65	160	$^{\circ}$ C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) If Military/Aerospace specified devices are required, please contact the Texas Instruments Sales Office/Distributors for availability and specifications.

### 6.2 ESD Ratings

		VALUE	UNIT
$V_{(\text{ESD})}$	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup>	$\pm 2000$
		Charged-device model (CDM), per JEDEC specification JESD22-C101 <sup>(2)</sup>	$\pm 200$

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process. Manufacturing with less than 500-V HBM is possible with the necessary precautions. Pins listed as  $\pm 2000$  V may actually have higher performance.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process. Manufacturing with less than 250-V CDM is possible with the necessary precautions. Pins listed as  $\pm 200$  V may actually have higher performance.

### 6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

			MIN	NOM	MAX	UNIT	
$V_{CC}$	Input voltage range	$T_A = 0^{\circ}\text{C to } 70^{\circ}\text{C}$	1.0		5.5	V	
		$T_A = -40^{\circ}\text{C to } 105^{\circ}\text{C}$	1.2		5.5		
$I_{CC}$	Supply Current	$V_{CC} < 5.5$ V, LM8xx: 4.63, 4.38, 4.00	$T_A = -40^{\circ}\text{C to } 85^{\circ}\text{C}$		18	60	$\mu$ A
			$T_A = 85^{\circ}\text{C to } 105^{\circ}\text{C}$			100	
		$V_{CC} < 3.6$ V, LM8xx: 3.08, 2.93, 2.63, 2.45	$T_A = -40^{\circ}\text{C to } 85^{\circ}\text{C}$		15	50	
			$T_A = 85^{\circ}\text{C to } 105^{\circ}\text{C}$			100	

### 6.4 Thermal Information

THERMAL METRIC <sup>(1)</sup>		LM809, LM810	UNIT
		DBZ (SOT-23)	
		3 PINS	
$R_{\theta JA}$	Junction-to-ambient thermal resistance	252.0	$^{\circ}\text{C/W}$
$R_{\theta JC(\text{top})}$	Junction-to-case (top) thermal resistance	113.3	$^{\circ}\text{C/W}$
$R_{\theta JB}$	Junction-to-board thermal resistance	53.5	$^{\circ}\text{C/W}$
$\Psi_{JT}$	Junction-to-top characterization parameter	9.9	$^{\circ}\text{C/W}$
$\Psi_{JB}$	Junction-to-board characterization parameter	52.6	$^{\circ}\text{C/W}$
$R_{\theta JC(\text{bot})}$	Junction-to-case (bottom) thermal resistance	—	$^{\circ}\text{C/W}$

- (1) For more information about traditional and new thermal metrics, see the *Semiconductor and IC Package Thermal Metrics* application report, [SPRA953](#).

## 6.5 Electrical Characteristics

$V_{CC}$  = full range,  $T_A$  =  $-40^{\circ}\text{C}$  to  $105^{\circ}\text{C}$ , unless otherwise noted. Typical values are at  $T_A = 25^{\circ}\text{C}$ ,  $V_{CC} = 5\text{ V}$  for 4.63, 4.38, and 4.00 versions,  $V_{CC} = 3.3\text{ V}$  for 3.08 and 2.93 versions, and  $V_{CC} = 3\text{ V}$  for 2.63 and 2.45 version<sup>(1)</sup>.

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT		
$V_{TH}$	Reset Threshold <sup>(2)</sup>	LM8xx: 4.63 V	$T_A = 25^{\circ}\text{C}$	4.56	4.63	4.70	V	
			$T_A = -40^{\circ}\text{C}$ to $85^{\circ}\text{C}$	4.50		4.75		
			$T_A = 85^{\circ}\text{C}$ to $105^{\circ}\text{C}$	4.40		4.86		
		LM8xx: 4.38 V	$T_A = 25^{\circ}\text{C}$	4.31	4.38	4.45		
			$T_A = -40^{\circ}\text{C}$ to $85^{\circ}\text{C}$	4.25		4.50		
			$T_A = 85^{\circ}\text{C}$ to $105^{\circ}\text{C}$	4.16		4.56		
		LM8xx: 4.00 V	$T_A = 25^{\circ}\text{C}$	3.93	4.00	4.06		
			$T_A = -40^{\circ}\text{C}$ to $85^{\circ}\text{C}$	3.89		4.10		
			$T_A = 85^{\circ}\text{C}$ to $105^{\circ}\text{C}$	3.80		4.20		
	LM8xx: 3.08 V	$T_A = 25^{\circ}\text{C}$	3.04	3.08	3.11			
		$T_A = -40^{\circ}\text{C}$ to $85^{\circ}\text{C}$	3.00		3.15			
		$T_A = 85^{\circ}\text{C}$ to $105^{\circ}\text{C}$	2.92		3.23			
	LM8xx: 2.93 V	$T_A = 25^{\circ}\text{C}$	2.89	2.93	2.96			
		$T_A = -40^{\circ}\text{C}$ to $85^{\circ}\text{C}$	2.85		3.00			
		$T_A = 85^{\circ}\text{C}$ to $105^{\circ}\text{C}$	2.78		3.08			
	LM8xx: 2.63 V	$T_A = 25^{\circ}\text{C}$	2.59	2.63	2.66			
		$T_A = -40^{\circ}\text{C}$ to $85^{\circ}\text{C}$	2.55		2.70			
		$T_A = 85^{\circ}\text{C}$ to $105^{\circ}\text{C}$	2.50		2.76			
	LM8xx: 2.45 V	$T_A = 25^{\circ}\text{C}$	2.41	2.45	2.49			
		$T_A = -40^{\circ}\text{C}$ to $85^{\circ}\text{C}$	2.38		2.52			
		$T_A = 85^{\circ}\text{C}$ to $105^{\circ}\text{C}$	2.33		2.57			
	Reset Threshold Temperature Coefficient				30			ppm/ $^{\circ}\text{C}$
	$V_{CC}$ to Reset Delay <sup>(2)</sup>		$V_{CC} = V_{TH}$ to $(V_{TH} - 100\text{ mV})$		20			$\mu\text{s}$
	Reset Active Timeout Period		$T_A = -40^{\circ}\text{C}$ to $85^{\circ}\text{C}$	140	240	560		ms
$T_A = 85^{\circ}\text{C}$ to $105^{\circ}\text{C}$			100		840			
$V_{OL}$	RESE $\overline{T}$ Output Voltage Low (LM809)	$V_{CC} = V_{TH(\text{min})}$ , $I_{\text{SINK}} = 1.2\text{ mA}$ , LM809: 2.45, 2.63, 2.93, 3.08			0.3	V		
		$V_{CC} = V_{TH(\text{min})}$ , $I_{\text{SINK}} = 3.2\text{ mA}$ , LM809: 4.63, 4.38, 4.00			0.4			
		$V_{CC} > 1\text{ V}$ , $I_{\text{SINK}} = 50\text{ }\mu\text{A}$			0.3			
	RESET Output Voltage Low (LM810)	$V_{CC} = V_{TH(\text{max})}$ , $I_{\text{SINK}} = 1.2\text{ mA}$ , LM810: 2.63, 2.93, 3.08			0.3			
$V_{CC} = V_{TH(\text{max})}$ , $I_{\text{SINK}} = 3.2\text{ mA}$ , LM810: 4.63, 4.38, 4.00				0.4				
$V_{OH}$	RESE $\overline{T}$ Output Voltage High (LM809)	$V_{CC} > V_{TH(\text{max})}$ , $I_{\text{SOURCE}} = 500\text{ }\mu\text{A}$ , LM809: 2.45, 2.63, 2.93, 3.08	$0.8 \times V_{CC}$			V		
		$V_{CC} > V_{TH(\text{max})}$ , $I_{\text{SOURCE}} = 800\text{ }\mu\text{A}$ , LM809: 4.63, 4.38, 4.00	$V_{CC} - 1.5$					
	RESET Output Voltage High (LM810)	$1.8\text{ V} < V_{CC} < V_{TH(\text{min})}$ , $I_{\text{SOURCE}} = 150\text{ }\mu\text{A}$	$0.8 \times V_{CC}$					

(1) Production testing done at  $T_A = 25^{\circ}\text{C}$ , over temperature limits specified by design only.

(2) RESE $\overline{T}$  Output for LM809, RESET output for LM810.

## 7 Detailed Description

### 7.1 Overview

The LM809 and LM810 microprocessor supervisory circuits provide a simple solution to monitor the power supplies in microprocessor and digital systems and provide a reset during power-up, power-down, and brown-out conditions. The reset signal is controlled by the factory-programmed reset threshold on the  $V_{CC}$  supply voltage pin. When the voltage declines below the reset threshold, the reset signal is asserted and remains asserted for 240 ms after  $V_{CC}$  rises above the threshold. The LM809 has an active-low  $\overline{\text{RESET}}$  output, while the LM810 has an active-high RESET output. The available threshold options are 2.63 V, 2.93 V, 3.08 V, 4.38 V, and 4.63 V to provide precision monitoring of supply voltages.

### 7.2 Functional Block Diagram

### 7.3 Feature Description

#### 7.3.1 Benefits of Precision Reset Thresholds

A microprocessor supply supervisor must provide a reset output within a predictable range of the supply voltage. A common threshold range is between 5% and 10% below the nominal supply voltage. The 4.63-V and 3.08-V options of the LM809 and LM810 use highly accurate circuitry to ensure that the reset threshold occurs only within this range (for 5-V and 3.3-V supplies). The other voltage options have the same tight tolerance to ensure a reset signal for other narrow monitor ranges. See [Table 1](#) for examples of how the standard reset thresholds apply to 3-V, 3.3-V, and 5-V nominal supply voltages.

**Table 1. Reset Thresholds Related to Common Supply Voltages**

Reset Threshold	3 V	3.3 V	5 V
4.63 ± 3%			90 – 95%
4.38 ± 3%			85 – 90%
4.00 ± 3%			78 – 82%
3.08 ± 3%		90 – 95%	
2.93 ± 3%		86 – 90%	
2.63 ± 3%	85 – 90%	77 – 81%	
2.45 ± 3%	79 – 84%	72 – 76%	

### 7.3.1.1 Ensuring a Valid Reset Output Down to $V_{CC} = 0\text{ V}$

When  $V_{CC}$  falls below 1 V, the LM809  $\overline{\text{RESET}}$  output no longer sinks current. A high-impedance CMOS logic input connected to  $\overline{\text{RESET}}$  can therefore drift to undetermined voltages. To prevent this situation, a 100-k $\Omega$  resistor should be connected from the  $\overline{\text{RESET}}$  output to ground, as shown in Figure 7.

A 100-k $\Omega$  pullup resistor to  $V_{CC}$  is also recommended for the LM810, if  $\overline{\text{RESET}}$  is required to remain valid for  $V_{CC} < 1\text{ V}$ .

Figure 7.  $\overline{\text{RESET}}$  Valid to  $V_{CC} = \text{Ground}$  Circuit

### 7.3.1.2 Negative-Going $V_{CC}$ Transients

The LM809 and LM810 are relatively immune to short negative-going transients or glitches on  $V_{CC}$ . Figure 8 shows the maximum pulse width a negative-going  $V_{CC}$  transient can have without causing a reset pulse. In general, as the magnitude of the transient increases, going further below the threshold, the maximum allowable pulse width decreases. Typically, for the 4.63-V and 4.38-V version of the LM809 or LM810, a  $V_{CC}$  transient that goes 100 mV below the reset threshold and lasts 20  $\mu\text{s}$  or less will not cause a reset pulse. A 0.1- $\mu\text{F}$  bypass capacitor mounted as close as possible to the  $V_{CC}$  pin will provide additional transient rejection.

Figure 8. Maximum Transient Duration without Causing a Reset Pulse vs Reset Comparator Overdrive

### 7.3.1.3 Interfacing to $\mu$ Ps with Bidirectional Reset Pins

Microprocessors with bidirectional reset pins, such as the Motorola 68HC11 series, can be connected to the LM809 RESET output. To ensure a correct output on the LM809 even when the microprocessor reset pin is in the opposite state, connect a 4.7-k $\Omega$  resistor between the LM809 RESET output and the  $\mu$ P reset pin, as shown in Figure 9. Buffer the LM809 RESET output to other system components.

**Figure 9. Interfacing to Microprocessors with Bidirectional Reset I/O**

## 7.4 Device Functional Modes

### 7.4.1 V<sub>CC</sub> Supply Voltage Low

When V<sub>CC</sub> supply voltage declines below the reset threshold, the RESET output is asserted. For LM809, the active-low RESET output is low. For LM810, the active-high RESET output is high.

### 7.4.2 V<sub>CC</sub> Supply Voltage High

When the V<sub>CC</sub> supply voltage rises above the reset threshold, the RESET output resets after 240 ms. For LM809, the active-low RESET output rises high. For LM810, the active-high RESET output drops low.

## 8 Application and Implementation

### NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

### 8.1 Application Information

The LM809 and LM810 are a supervisor circuit for microprocessor and digital systems. With a low supply current of only 15  $\mu$ A, the LM809 and LM810 are ideal for use in portable equipment.

### 8.2 Typical Application

**Figure 10. Microprocessor  $\overline{\text{RESET}}$  Circuit**

#### 8.2.1 Design Requirements

For this design example, use the parameters listed in [Table 2](#) as the input parameters.

**Table 2. Design Parameters**

DESIGN PARAMETER	EXAMPLE VALUE
Input supply voltage range	1 V to 5.5 V
Reset output voltage (high)	Input supply
Reset output voltage (low)	0 V

#### 8.2.2 Detailed Design Procedure

For the typical application circuit, all that is required is the LM809 or LM810 IC, but TI recommends an input capacitor to help with input voltage transients. A typical input capacitor value is 0.1  $\mu$ F and must be rated for the highest expected input voltage.

### 8.2.3 Application Curve

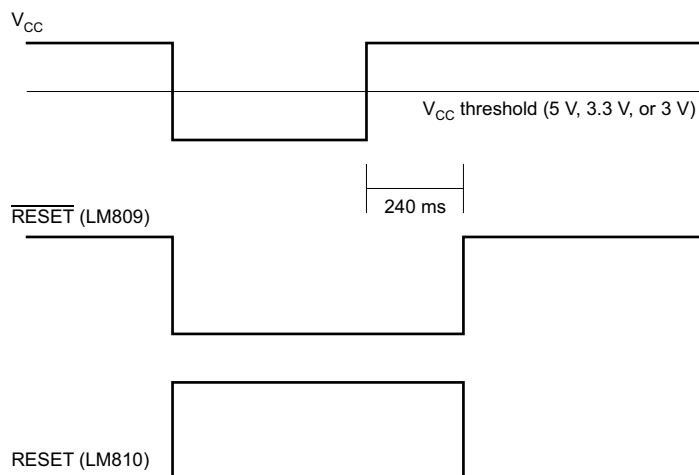

Figure 11. Reset Active Timeout

## 9 Power Supply Recommendations

The input of the LM809 is designed to handle up to the supply voltage absolute maximum rating of 6.5 V. If the input supply is susceptible to any large transients above the maximum rating, then extra precautions should be taken. An input capacitor is recommended to avoid false reset output triggers due to noise.

## 10 Layout

### 10.1 Layout Guidelines

Place the input capacitor as close as possible to the IC.

### 10.2 Layout Example

Figure 12. Layout Example

## 11 Device and Documentation Support

### 11.1 Related Links

The table below lists quick access links. Categories include technical documents, support and community resources, tools and software, and quick access to sample or buy.

LM810M3X-4.63/NOPB	ACTIVE	SOT-23	DBZ	3	3000	Green (RoHS & no Sb/Br)	CU SN	Level-1-260C-UNLIM	-40 to 105	SEB	<a href="#">Samples</a>

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSELETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of  $\leq 1000$ ppm threshold. Antimony trioxide based flame retardants must also meet the  $\leq 1000$ ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

## TAPE AND REEL INFORMATION

6. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
7. Board assembly site may have different recommendations for stencil design.

## IMPORTANT NOTICE

Texas Instruments Incorporated (TI) reserves the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete.

TI's published terms of sale for semiconductor products (<http://www.ti.com/sc/docs/stdterms.htm>) apply to the sale of packaged integrated circuit products that TI has qualified and released to market. Additional terms may apply to the use or sale of other types of TI products and services.

Reproduction of significant portions of TI information in TI data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such reproduced documentation. Information of third parties may be subject to additional restrictions. Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyers and others who are developing systems that incorporate TI products (collectively, "Designers") understand and agree that Designers remain responsible for using their independent analysis, evaluation and judgment in designing their applications and that Designers have full and exclusive responsibility to assure the safety of Designers' applications and compliance of their applications (and of all TI products used in or for Designers' applications) with all applicable regulations, laws and other applicable requirements. Designer represents that, with respect to their applications, Designer has all the necessary expertise to create and implement safeguards that (1) anticipate dangerous consequences of failures, (2) monitor failures and their consequences, and (3) lessen the likelihood of failures that might cause harm and take appropriate actions. Designer agrees that prior to using or distributing any applications that include TI products, Designer will thoroughly test such applications and the functionality of such TI products as used in such applications.

TI's provision of technical, application or other design advice, quality characterization, reliability data or other services or information, including, but not limited to, reference designs and materials relating to evaluation modules, (collectively, "TI Resources") are intended to assist designers who are developing applications that incorporate TI products; by downloading, accessing or using TI Resources in any way, Designer (individually or, if Designer is acting on behalf of a company, Designer's company) agrees to use any particular TI Resource solely for this purpose and subject to the terms of this Notice.

TI's provision of TI Resources does not expand or otherwise alter TI's applicable published warranties or warranty disclaimers for TI products, and no additional obligations or liabilities arise from TI providing such TI Resources. TI reserves the right to make corrections, enhancements, improvements and other changes to its TI Resources. TI has not conducted any testing other than that specifically described in the published documentation for a particular TI Resource.

Designer is authorized to use, copy and modify any individual TI Resource only in connection with the development of applications that include the TI product(s) identified in such TI Resource. NO OTHER LICENSE, EXPRESS OR IMPLIED, BY ESTOPPEL OR OTHERWISE TO ANY OTHER TI INTELLECTUAL PROPERTY RIGHT, AND NO LICENSE TO ANY TECHNOLOGY OR INTELLECTUAL PROPERTY RIGHT OF TI OR ANY THIRD PARTY IS GRANTED HEREIN, including but not limited to any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information regarding or referencing third-party products or services does not constitute a license to use such products or services, or a warranty or endorsement thereof. Use of TI Resources may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

TI RESOURCES ARE PROVIDED "AS IS" AND WITH ALL FAULTS. TI DISCLAIMS ALL OTHER WARRANTIES OR REPRESENTATIONS, EXPRESS OR IMPLIED, REGARDING RESOURCES OR USE THEREOF, INCLUDING BUT NOT LIMITED TO ACCURACY OR COMPLETENESS, TITLE, ANY EPIDEMIC FAILURE WARRANTY AND ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, AND NON-INFRINGEMENT OF ANY THIRD PARTY INTELLECTUAL PROPERTY RIGHTS. TI SHALL NOT BE LIABLE FOR AND SHALL NOT DEFEND OR INDEMNIFY DESIGNER AGAINST ANY CLAIM, INCLUDING BUT NOT LIMITED TO ANY INFRINGEMENT CLAIM THAT RELATES TO OR IS BASED ON ANY COMBINATION OF PRODUCTS EVEN IF DESCRIBED IN TI RESOURCES OR OTHERWISE. IN NO EVENT SHALL TI BE LIABLE FOR ANY ACTUAL, DIRECT, SPECIAL, COLLATERAL, INDIRECT, PUNITIVE, INCIDENTAL, CONSEQUENTIAL OR EXEMPLARY DAMAGES IN CONNECTION WITH OR ARISING OUT OF TI RESOURCES OR USE THEREOF, AND REGARDLESS OF WHETHER TI HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

Unless TI has explicitly designated an individual product as meeting the requirements of a particular industry standard (e.g., ISO/TS 16949 and ISO 26262), TI is not responsible for any failure to meet such industry standard requirements.

Where TI specifically promotes products as facilitating functional safety or as compliant with industry functional safety standards, such products are intended to help enable customers to design and create their own applications that meet applicable functional safety standards and requirements. Using products in an application does not by itself establish any safety features in the application. Designers must ensure compliance with safety-related requirements and standards applicable to their applications. Designer may not use any TI products in life-critical medical equipment unless authorized officers of the parties have executed a special contract specifically governing such use. Life-critical medical equipment is medical equipment where failure of such equipment would cause serious bodily injury or death (e.g., life support, pacemakers, defibrillators, heart pumps, neurostimulators, and implantables). Such equipment includes, without limitation, all medical devices identified by the U.S. Food and Drug Administration as Class III devices and equivalent classifications outside the U.S.

TI may expressly designate certain products as completing a particular qualification (e.g., Q100, Military Grade, or Enhanced Product). Designers agree that it has the necessary expertise to select the product with the appropriate qualification designation for their applications and that proper product selection is at Designers' own risk. Designers are solely responsible for compliance with all legal and regulatory requirements in connection with such selection.

Designer will fully indemnify TI and its representatives against any damages, costs, losses, and/or liabilities arising out of Designer's non-compliance with the terms and provisions of this Notice.
