

**THE DATASHEET OF  
MAX4754ETE+**

**0.5Ω, Quad SPDT Switches in UCSP/QFN****General Description**

The MAX4754/MAX4754A/MAX4755/MAX4756/MAX4756A low on-resistance, analog switches operate from a single +1.8V to +5.5V supply. The MAX4754/MAX4754A and MAX4755 are dual, double-pole, double-throw (DPDT) switches. The MAX4756/MAX4756A are quad, single-pole double-throw (SPDT) switches. They are configured to route either audio or data signals.

The MAX4754/MAX4754A have four 0.5Ω SPDT switches for audio-signal routing and two logic control inputs. The MAX4755 has four 0.5Ω SPDT switches (with two switches that have an additional 11Ω series resistor at the NC terminals). This allows users to drive an 8Ω speaker as a 32Ω load (ear speaker). The MAX4756/MAX4756A have four 0.5Ω SPDT switches controlled by one logic control input and an enable input (EN) to disable the switches.

The MAX4754/MAX4754A/MAX4755/MAX4756/MAX4756A are available in a space-saving 16-pin TQFN and a tiny 16-bump, 2mm x 2mm chip-scale package (UCSP™).

**Applications**

Speaker-Headset Switching  
Audio-Signal Routing  
Cellular Phones  
PDAs/Handheld Devices  
Notebook Computers

UCSP is a trademark of Maxim Integrated Products, Inc.

Pin Configurations appear at end of data sheet.

**Features**

- ◆ Data and Audio-Signal Routing
- ◆ Low  $R_{ON}$  (0.5Ω typ) Audio Switches
- ◆ 0.1Ω (typ) Channel-to-Channel Matching
- ◆ 0.2Ω (typ) On-Resistance Flatness
- ◆ 0.035% (typ) THD
- ◆ Improved Power-Supply Current for Non-Rail-to-Rail Control Logic Inputs (MAX4754A/MAX4756A)
- ◆ +1.8V to +5.5V Supply Range
- ◆ Rail-to-Rail Signal Handling
- ◆ 16-Bump UCSP (2mm x 2mm)

**Note 1:** Signals on NO\_, NC\_, COM\_ exceeding V+ or GND are clamped by internal diodes. Limit forward-diode current to maximum current rating.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

## Typical Operating Circuit

### Detailed Description

The MAX4754/MAX4754A/MAX4755/MAX4756/MAX4756A low on-resistance analog switches operate from a single +1.8V to +5.5V supply. The devices are fully specified for nominal 3V applications.

The MAX4754/MAX4754A DPDT switch have two logic control inputs with each input controlling two SPDT switches. Each switch has a 0.5Ω on-resistance in the NO and NC terminals making it ideal for switching audio signals.

The MAX4755 DPDT switch also has four 0.5Ω SPDT switches with the switch pairs 1 and 2 adding an 11.5Ω series resistor to the NC terminal. This feature allows the user to drive an 8Ω speaker as a 32Ω load, allowing it to be used as an ear speaker. Two logic control inputs are used to control the four switches.

The MAX4756/MAX4756A has four 0.5Ω SPDT switches controlled by one logic control input (INA) and  $\overline{EN}$  input to disable the switches.

### Applications Information

#### Digital Control Inputs

The MAX4754/MAX4754A/MAX4755/MAX4756/MAX4756A logic inputs accept up to +5.5V regardless of the supply voltage. For example, with a +3.3V supply  $IN_{-}$  can be driven low to GND and high to +5.5V, which allows mixed logic levels in a system. Driving the control logic

inputs rail-to-rail also minimizes power consumption. For a +3V supply voltage, the logic thresholds are 0.5V (low) and 1.4V (high).

For the MAX4756/MAX4756A, drive  $\overline{EN}$  low to enable the COM\_. When  $\overline{EN}$  is high, COM\_ is high impedance.

#### Analog Signal Levels

Analog signal inputs over the full voltage range (0V to V+) are passed through the switch with minimal change in on-resistance (see the *Typical Operating Characteristics*). The switches are bidirectional so NO\_, NC\_, and COM\_ can be either inputs or outputs.

#### Power-Supply Bypassing

Power-supply bypassing improves noise margin and prevents switching noise from propagating from the V+ supply to other components. A 0.1μF capacitor connected from V+ to GND is adequate for most applications.
