

## White LED Driver Internal Schottky Diode and OVP

### Features

- 2.5V to 10V Input Voltage Range
- Output Voltage up to 34V
- Internal Schottky Diode
- 15V, 24V, 34V Output OVP Options
- 1.2 MHz PWM Operation
- Over 500 mA Switch Current
- 95 mV Feedback Voltage
- <1% Line and Load Regulation
- <1  $\mu$ A Shutdown Current
- Overtemperature Protection
- UVLO
- 6-Pin Thin SOT-23 and 2 mm x 2 mm DFN-8 Package Options
- $-40^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$  Junction Temperature Range

### Applications

- White LED Driver for Backlighting:
  - Cell Phones
  - PDAs
  - GPS Systems
  - Digital Cameras
  - MP3 Players
  - IP Phones
- LED Flashlights
- Constant Current Power Supplies

### General Description

The MIC2289 is a PWM (pulse width modulated), boost-switching regulator that is optimized for constant current white LED driver applications. The MIC2289 features an internal Schottky diode and three levels of output overvoltage protection providing a small size and efficient DC/DC solution that requires only four external components.

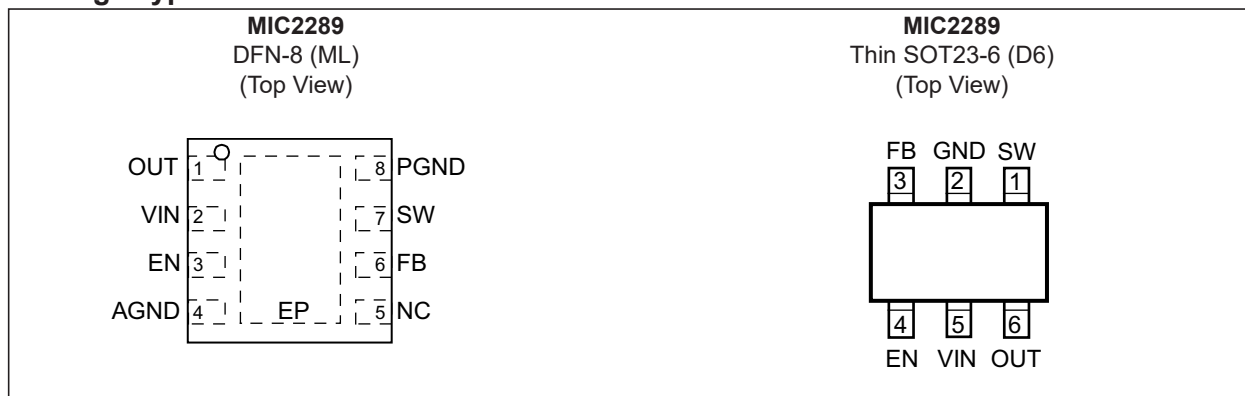

To optimize efficiency, the feedback voltage is set to only 95 mV. This reduces power dissipation in the current setting resistor and allows the lowest total output voltage, hence minimizes current draw from the battery.

The MIC2289 implements a constant frequency 1.2 MHz PWM control scheme. The high frequency, PWM operation saves board space by reducing external component sizes. The added benefit of the constant frequency PWM scheme in comparison to variable frequency is much lower noise and input ripple injected to the input power source.

The MIC2289 clamps the output voltage in case of open LED conditions, protecting itself and the output capacitor. The MIC2289 is available with three output OVP options of 15V, 24V, and 34V. The different OVP options allows the use of the smallest possible output capacitor with the appropriate voltage rating for a given application.

The MIC2289 is available in low profile 6-pin Thin SOT-23 and 8-pin 2 mm  $\times$  2 mm DFN package options. The MIC2289 has a junction temperature range of  $-40^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$ .

### Package Types

## 1.0 ELECTRICAL CHARACTERISTICS

### Absolute Maximum Ratings †

Supply Voltage ( $V_{IN}$ ) .....	+12V
Switch Voltage ( $V_{SW}$ ) .....	-0.3V to +34V
Enable Pin Voltage ( $V_{EN}$ ) .....	-0.3V to $V_{IN}$
FB Voltage ( $V_{FB}$ ) .....	+6.0V
Switch Current ( $I_{SW}$ ) .....	2A
Schottky Reverse Voltage ( $V_{DR}$ ) .....	34V
Ambient Storage Temperature Range ( $T_S$ ) .....	-65°C to +150°C
ESD Rating (Note 1) .....	2 kV

### Operating Ratings ††

Supply Voltage ( $V_{IN}$ ) .....	+2.5V to +10V
Output Voltage ( $V_{OUT}$ ) .....	$V_{IN}$ to $V_{OVP}$
Junction Temperature Range ( $T_J$ ) .....	-40°C to +125°C
Package Thermal Resistance	
2 mm x 2 mm DFN ( $\theta_{JA}$ ) .....	93°C/W
Thin SOT23-6 ( $\theta_{JA}$ ) .....	177°C/W

**† Notice:** Stresses above those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. This is a stress rating only and functional operation of the device at those or any other conditions above those indicated in the operational sections of this specification is not intended. Exposure to maximum rating conditions for extended periods may affect device reliability.

**†† Notice:** The device is not guaranteed to function outside its operating ratings.

**Note 1:** Devices are ESD sensitive. Handling precautions are recommended. Human body model, 1.5 k $\Omega$  in series with 100 pF.

# MIC2289

## ELECTRICAL CHARACTERISTICS

**Electrical Characteristics:**  $T_A = +25^\circ\text{C}$ ,  $V_{IN} = V_{EN} = 3.6\text{V}$ ,  $V_{OUT} = 10\text{V}$ ,  $I_{OUT} = 20\text{ mA}$ , unless otherwise noted. **Bold** values indicate  $-40^\circ\text{C} \leq T_J \leq \pm 125^\circ\text{C}$ . [Note 1](#)

Parameter	Symbol	Min.	Typ.	Max.	Units	Conditions

**3:** Guaranteed by design.

## TEMPERATURE SPECIFICATIONS

Parameters	Symbol	Min.	Typ.	Max.	Units	Conditions
<b>Temperature Ranges</b>						
Junction Operating Temperature	$T_J$	-40	—	+125	°C	—
Maximum Junction Temperature	$T_{J(ABS)}$	—	—	+150	°C	—
Storage Temperature Range	$T_S$	-65	—	+150	°C	—
<b>Package Thermal Resistances</b>						
Thermal Resistance, 2x2 DFN 8-Lead	$\theta_{JA}$	—	93	—	°C/W	—
Thermal Resistance, TSOT23-6	$\theta_{JA}$	—	177	—	°C/W	—

**Note 1:** The maximum allowable power dissipation is a function of ambient temperature, the maximum allowable junction temperature and the thermal resistance from junction to air (i.e.,  $T_A$ ,  $T_J$ ,  $\theta_{JA}$ ). Exceeding the maximum allowable power dissipation will cause the device operating junction temperature to exceed the maximum +125°C rating. Sustained junction temperatures above +125°C can impact the device reliability.

## 2.0 TYPICAL PERFORMANCE CURVES

**Note:** The graphs and tables provided following this note are a statistical summary based on a limited number of samples and are provided for informational purposes only. The performance characteristics listed herein are not tested or guaranteed. In some graphs or tables, the data presented may be outside the specified operating range (e.g., outside specified power supply range) and therefore outside the warranted range.

## 3.0 PIN DESCRIPTIONS

The descriptions of the pins are listed in [Table 3-1](#).

**TABLE 3-1: PIN FUNCTION TABLE**

Pin Number TSOT23-6	Pin Number DFN-8	Pin Name	Description
1	7	SW	Switch Node (Input): Internal power bipolar collector.
2	—	GND	Ground (Return): Ground.
3	6	FB	Feedback (Input): Output voltage sense node. Connect the cathode of the LED to this pin. A resistor from this pin to ground sets the LED current.
4	3	EN	Enable (input): Logic high enables regulator. Logic low shuts down regulator. Do not leave floating.
5	2	VIN	Supply (Input): 2.5V to 10V for internal circuitry.
6	1	OUT	Output Pin and Overvoltage Protection (Output): Connect to the output capacitor and LEDs.
—	4	AGND	Analog ground.
—	8	PGND	Power ground.
—	5	NC	No connect (no internal connection to die).
—	EP	GND	Ground (Return): Exposed backside pad.

## 4.0 FUNCTIONAL DESCRIPTION

The MIC2289 is a constant frequency, PWM current mode boost regulator. See the [Functional Block Diagram](#). The MIC2289 is composed of an oscillator, slope compensation ramp generator, current amplifier,  $g_m$  error amplifier, PWM generator, and a 500 mA bipolar output transistor. The oscillator generates a 1.2 MHz clock. The clock's two functions are to trigger the PWM generator that turns on the output transistor and to reset the slope compensation ramp generator. The current amplifier is used to measure the switch current by amplifying the voltage signal from the internal sense resistor. The output of the current amplifier is summed with the output of the slope compensation ramp generator to generate the slope compensated ramp signal. This summed current-loop signal is fed to one of the inputs of the PWM generator.

The  $g_m$  error amplifier measures the LED current through the external sense resistor and amplifies the error between the detected signal and the 95 mV reference voltage. The output of the  $g_m$  error amplifier provides the voltage loop signal that is fed to the other input of the PWM generator. When the current-loop signal exceeds the voltage loop signal, the PWM generator turns off the bipolar output transistor. The next clock period initiates the next switching cycle, maintaining the constant frequency current mode PWM control. The LED current is set by the feedback resistor:

### EQUATION 4-1:

$$I_{LED} = \frac{95mV}{R_{FB}}$$

The Enable pin shuts down the output switching and disables control circuitry to reduce VIN pin input current to leakage current level. Enable pin input current is zero at zero volt.

## 4.1 Dimming Control

There are two techniques for dimming control. One is PWM dimming, and the other is continuous dimming.

1. PWM dimming control is implemented by applying a PWM signal on EN pin as shown in [Figure 4-1](#). The MIC2289 is turned on and off by the PWM signal. With this method, the LEDs operate with either zero or full current. The average LED current is increased proportionally to the duty-cycle of the PWM signal. This technique has high efficiency because the IC and the LEDs consume no current during the off-cycle of the PWM signal. Typical frequency should be between 100 Hz and 10 kHz.

2. Continuous dimming control is implemented by applying a DC control voltage to the FB pin of the MIC2289 through a series resistor as shown in [Figure 4-2](#). The LED current is decreased proportionally with the amplitude of the control voltage. The LED intensity (current) can be dynamically varied applying a DC voltage to the FB pin. The DC voltage can come from a DAC signal, or a filtered PWM signal. The advantage of this approach is that a high frequency PWM signal (>10 kHz) can be used to control LED intensity.

**FIGURE 4-1:** PWM Dimming Method.

**FIGURE 4-2:** Continuous Dimming.

## 4.2 Open Circuit Protection

If the LEDs are disconnected from the circuit, or in case an LED fails open, the sense resistor will pull the FB pin to ground. This will cause the MIC2289 to switch with a high duty cycle, resulting in output overvoltage. This may cause the SW pin voltage to exceed its maximum voltage rating, possibly damaging the IC and the external components. To ensure the highest level of protection, the MIC2289 has three product options in the 2 mm × 2 mm DFN-8 with overvoltage protection, OVP. The OUT pin of the MIC2289 allows a dedicated OVP monitor with options for 15V, 24V, or 34V (see [Figure 4-3](#)). The reason for the three OVP levels is to let users choose the suitable level of OVP for their application. For example, a 3-LED application would typically see an output voltage of no more than 12V, so

# MIC2289

a 15V OVP option would offer a suitable level of protection. This allows the user to select the output diode and capacitor with the lowest voltage ratings, therefore smallest size and lowest cost. The OVP will clamp the output voltage to within the specified limits.

**FIGURE 4-3:** OVP Detection via OUT Pin.

## 4.3 Start-Up and Inrush Current

During start-up, inrush current of approximately double the nominal current flows to set up the inductor current and the voltage on the output capacitor. If the inrush current needs to be limited, a soft-start circuit similar to Figure 4-4 could be implemented. The soft-start capacitor,  $C_{SS}$ , provides over drive voltage to the FB pin at start-up, resulting in gradual increase of switch duty cycle and limited inrush current.

**FIGURE 4-4:** Soft-Start Circuit.

## 5.0 EXTERNAL COMPONENT SELECTION

The MIC2289 can be used across a wide range of applications. The table below shows recommended inductor and output capacitor values for various series-LED applications.

**TABLE 5-1: EXTERNAL COMPONENT SELECTION**

<p><b>Package:</b></p> <p>D6 = 6-Lead TSOT (24V OVP only)</p> <p>ML = 12-Lead 3 mm x 3 mm x 0.9 mm DFN</p>				
<p><b>Media Type:</b></p> <p>TR = 3,000/Reel (D6, TSOT)</p> <p>TX = 3,000/Reel (D6, TSOT), Reverse pin 1 Orientation</p> <p>TR = 5,000/Reel (ML, DFN)</p>				
<p><b>Examples:</b></p> <p>a) MIC2289-15YML-TR: White LED Driver Internal Schottky Diode, 15V OVP, Extended -40°C to +125°C Junction Temperature Range, RoHS compliant, 8-Lead DFN 2 mm x 2 mm x 0.9 mm Package, 5,000/Reel</p> <p>b) MIC2289-24YML-TR: White LED Driver Internal Schottky Diode, 24V OVP, Extended -40°C to +125°C Junction Temperature Range, RoHS compliant, 8-Lead DFN 2 mm x 2 mm x 0.9 mm Package, 5,000/Reel</p> <p>c) MIC2289-34YML-TR: White LED Driver Internal Schottky Diode, 34V OVP, Extended -40°C to +125°C Junction Temperature Range, RoHS compliant, 8-Lead DFN 2 mm x 2 mm x 0.9 mm Package, 5,000/Reel</p> <p>d) MIC2289-24YD6-TR: White LED Driver Internal Schottky Diode, 24V OVP, Extended -40°C to +125°C Junction Temperature Range, RoHS compliant, 6-Lead TSOT Package, 3,000/Reel</p> <p>e) MIC2289-24YD6-TX: White LED Driver Internal Schottky Diode, 24V OVP, Extended -40°C to +125°C Junction Temperature Range, RoHS compliant, 6-Lead TSOT Package, Reverse Pin 1 Orientation, 3,000/Reel</p>				
<p><b>Note 1:</b> Tape and Reel identifier only appears in the catalog part number description. This identifier is used for ordering purposes and is not printed on the device package. Check with your Microchip Sales Office for package availability with the Tape and Reel option.</p>				

# MIC2289

---

NOTES:

---

---

**Note the following details of the code protection feature on Microchip devices:**

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as “unbreakable.”

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

---

Information contained in this publication regarding device applications and the like is provided only for your convenience and may be superseded by updates. It is your responsibility to ensure that your application meets with your specifications. MICROCHIP MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND WHETHER EXPRESS OR IMPLIED, WRITTEN OR ORAL, STATUTORY OR OTHERWISE, RELATED TO THE INFORMATION, INCLUDING BUT NOT LIMITED TO ITS CONDITION, QUALITY, PERFORMANCE, MERCHANTABILITY OR FITNESS FOR PURPOSE. Microchip disclaims all liability arising from this information and its use. Use of Microchip devices in life support and/or safety applications is entirely at the buyer's risk, and the buyer agrees to defend, indemnify and hold harmless Microchip from any and all damages, claims, suits, or expenses resulting from such use. No licenses are conveyed, implicitly or otherwise, under any Microchip intellectual property rights unless otherwise stated.

### Trademarks

The Microchip name and logo, the Microchip logo, Adaptec, AnyRate, AVR, AVR logo, AVR Freaks, BesTime, BitCloud, chipKIT, chipKIT logo, CryptoMemory, CryptoRF, dsPIC, FlashFlex, flexPWR, HELDO, IGLOO, JukeBlox, KeeLoq, Klear, LANCheck, LinkMD, maXStylus, maXTouch, MediaLB, megaAVR, Microsemi, Microsemi logo, MOST, MOST logo, MPLAB, OptoLyzer, PackeTime, PIC, picoPower, PICSTART, PIC32 logo, PolarFire, Prochip Designer, QTouch, SAM-BA, SenGenuity, SpyNIC, SST, SST Logo, SuperFlash, Symmetricom, SyncServer, Tachyon, TempTrackr, TimeSource, tinyAVR, UNI/O, Vectron, and XMEGA are registered trademarks of Microchip Technology Incorporated in the U.S.A. and other countries.

APT, ClockWorks, The Embedded Control Solutions Company, EtherSynch, FlashTec, Hyper Speed Control, HyperLight Load, IntelliMOS, Libero, motorBench, mTouch, Powermite 3, Precision Edge, ProASIC, ProASIC Plus, ProASIC Plus logo, Quiet-Wire, SmartFusion, SyncWorld, Temux, TimeCesium, TimeHub, TimePictra, TimeProvider, Vite, WinPath, and ZL are registered trademarks of Microchip Technology Incorporated in the U.S.A.

Adjacent Key Suppression, AKS, Analog-for-the-Digital Age, Any Capacitor, AnyIn, AnyOut, BlueSky, BodyCom, CodeGuard, CryptoAuthentication, CryptoAutomotive, CryptoCompanion, CryptoController, dsPICDEM, dsPICDEM.net, Dynamic Average Matching, DAM, ECAN, EtherGREEN, In-Circuit Serial Programming, ICSP, INICnet, Inter-Chip Connectivity, JitterBlocker, KlearNet, KlearNet logo, memBrain, Mindi, MiWi, MPASM, MPF, MPLAB Certified logo, MPLIB, MPLINK, MultiTRAK, NetDetach, Omniscient Code Generation, PICDEM, PICDEM.net, PICKit, PICtail, PowerSmart, PureSilicon, QMatrix, REAL ICE, Ripple Blocker, SAM-ICE, Serial Quad I/O, SMART-I.S., SQI, SuperSwitcher, SuperSwitcher II, Total Endurance, TSHARC, USBCheck, VariSense, ViewSpan, WiperLock, Wireless DNA, and ZENA are trademarks of Microchip Technology Incorporated in the U.S.A. and other countries.

SQTP is a service mark of Microchip Technology Incorporated in the U.S.A.

The Adaptec logo, Frequency on Demand, Silicon Storage Technology, and Symmcom are registered trademarks of Microchip Technology Inc. in other countries.

GestIC is a registered trademark of Microchip Technology Germany II GmbH & Co. KG, a subsidiary of Microchip Technology Inc., in other countries.

All other trademarks mentioned herein are property of their respective companies.
