

MIC6270

IttyBitty® Comparator

General Description

The MIC6270 is a precision voltage comparator with an offset voltage specification of 5mV maximum.

The MIC6270 is designed to operate from a single 2V to 36V power supply. Operation from split power supplies is also possible. Its low supply current drain is independent of the magnitude of the supply voltage.

This comparator also features an input common-mode voltage range that includes ground. Inputs are protected against reverse polarity (input voltage less than V^-) and ESD.

The MIC6270 has an open-collector output that directly interfaces with TTL, CMOS, and other types of logic. Several MIC6270 outputs can be connected together for wired-OR logic. The output also features an internal pull-up current source that can be used instead of an external load in some applications.

Data sheets and support documentation can be found on Micrel's web site at www.micrel.com.

Features

- 2V to 36V supply
- 300 μ A supply current independent of supply
- 25nA input bias current
- \pm 5nA input offset current
- \pm 3mV input offset voltage
- Input common-mode voltage range includes ground
- Differential input voltage range equal to the power supply voltage
- 250mV at 4mA output saturation voltage
- Output compatible with TTL, DTL, ECL, MOS, and CMOS logic

Applications

- Limit comparators
- A/D converters
- Pulse, square wave, time delay generators
- Wide range VCO
- MOS clock timers
- Multi-vibrators and high-voltage digital logic gates

Pin Description

Pin Number	Pin Name	Pin Function
1	OUT	Comparator Output
2	V-	Negative Supply: Negative supply for split supply application or ground for single supply application.
3	IN+	Non-inverting Input
4	IN-	Inverting Input
5	V+	Positive Supply

General Note: Devices are ESD protected; however, handling precautions are recommended.

1. A short circuit from OUT to V_+ can cause excessive heating and damage the device. The maximum short circuit output current (OUT to V_-) is approximately 20mA, independent of V_{V+} .
2. Measured at the output switch point where $V_{OUT} \cong 1.4Vdc$ with $R_S = 0\Omega$, $V_+ = 5Vdc$ to $30Vdc$, and over the full input common-mode range ($0Vdc$ to $V_+ - 1.5Vdc$).
3. The direction of input current is out of the device due to its PNP input.
4. The input common-mode voltage, V_{IN+} , or V_{IN-} must not go below $-0.3V$. The upper end of the common-mode voltage range is $V_+ - 1.5V$ at $25^{\circ}C$, but either or both inputs can go to $+36Vdc$ without damage, independent of V_{V+} .
5. The response time measured using a 100mV input step with 5mV overdrive. With greater overdrive, 300ns can be obtained. See "Typical Characteristics."
6. Positive excursions of input voltage may exceed the power supply level. As long as the other voltage remains within the common-mode range, the comparator will provide a proper output state. The low input voltage state must not be below $-0.3Vdc$ (or $0.3Vdc$ below V_{V-}).

Package Information

- NOTE:
1. PACKAGE OUTLINE EXCLUSIVE OF MOLD FLASH & BURR.
 2. PACKAGE OUTLINE INCLUSIVE OF SOLER PLATING.
 3. DIMENSION AND TOLERANCE PER ANSI Y14.5M, 1982.
 4. FOOT LENGTH MEASUREMENT BASED ON GAUGE PLANE METHOD.
 5. DIE FACES UP FOR MOLD, AND FACES DOWN FOR TRIM/FORM.
 6. ALL DIMENSIONS ARE IN MILLIMETERS.
