

## SPDT SWITCH GaAs MMIC

### ■GENERAL DESCRIPTION

NJG1516R is a GaAs SPDT switch IC suited for antenna switch of cellular phone handset.

This switch features low loss, high isolation at high power, and exhibits wide operating frequency range from 1MHz to 3GHz at low voltage of 2.7V.

### ■PACKAGE OUTLINE

NJG1516R

### ■FEATURES

- Single, low voltage control
  - Handling power
  - Low insertion loss
  - High isolation
  - Low current consumption
  - Very small package
- |  |   |
|--|---|
|  | +2.7V min.  |

## ■TERMINAL INFORMATION

No.	SYMBOL	EXPLANATION
1	VCTL2	Control port 2. The voltage of this port controls PC to P2 state. The 'ON' and 'OFF' state is toggled by controlling voltage of this terminal such as high-state (2.7~5.5V) or low-state (-0.2~+0.2V). The voltage of 4 <sup>th</sup> pin have to be set to opposite state. The bypass capacitor has to be chosen to reduce switching speed delay from 10pF~1000pF range.
2	PC	Common RF port. In order to block the DC bias voltage of internal circuit, an external capacitor is required. (50~100MHz: 0.01uF, 0.1~0.5GHz: 1000pF, 0.5~2.5GHz: 56pF)
3, 6, 7	GND	Ground terminal. Please connect this terminal with ground plane as close as possible for excellent RF performance.
4	VCTL1	Control port 1. The voltage of this port controls PC to P2 state. The 'ON' and 'OFF' state is toggled by controlling voltage of this terminal such as high-state (2.7~5.5V) or low-state (-0.2~+0.2V). The voltage of 1 <sup>st</sup> pin have to be set to opposite state. The bypass capacitor has to be chosen to reduce switching speed delay from 10pF~1000pF range.
5	P1	RF port. This port is connected with PC port by controlling 4 <sup>th</sup> pin ( $V_{CTL(H)}$ ) to 2.7~9.0V and 1 <sup>st</sup> pin ( $V_{CTL(L)}$ ) to -0.2~+0.2V. An external capacitor is required to block the DC bias voltage of internal circuit. (50~100MHz: 0.01μF, 0.1~0.5GHz: 1000pF, 0.5~2.5GHz: 56pF)
8	P2	RF port. This port is connected with PC port by controlling 1 <sup>st</sup> pin ( $V_{CTL(H)}$ ) to 2.7~9.0V and 4 <sup>th</sup> pin ( $V_{CTL(L)}$ ) to -0.2~+0.2V. An external capacitor is required to block the DC bias voltage of internal circuit. (50~100MHz: 0.01μF, 0.1~0.5GHz: 1000pF, 0.5~2.5GHz: 56pF)

## PRECAUTIONS

- [1]The DC blocking capacitors have to be placed at RF terminal of P1, P2 and PC.
- [2]Bypass capacitors (C4, C5) should be placed close to terminals of VCTL1, VCTL2 to reduce stripline influence of RF characteristics.
- [3]For good isolation, the GND terminal (3<sup>rd</sup>, 6<sup>th</sup>, 7<sup>th</sup> pin) must be placed possibly close to ground plane of substrate, and through holes for GND should be placed near by the pin connection.
- [4] To avoid degradation of isolation or high power characteristics, please layout ground pattern right under this IC.

### Cautions on using this product

This product contains Gallium-Arsenide (GaAs) which is a harmful material.

- Do NOT eat or put into mouth.
- Do NOT dispose in fire or break up this product.
- Do NOT chemically make gas or powder with this product.
- To waste this product, please obey the relating law of your country.

### [CAUTION]

The specifications on this databook are only given for information, without any guarantee as regards either mistakes or omissions. The application circuits in this databook are described only to show representative usages of the product and not intended for the guarantee or permission of any right including the industrial rights.

This product may be damaged with electric static discharge (ESD) or spike voltage. Please handle with care to avoid these damages.
