

**THE DATASHEET OF  
PHE448SB4150JR06**

### Overview

The PHE448 Series is a capacitor with polypropylene film dielectric and metal foil electrodes, encapsulated in self-extinguishing resin in a box of material meeting the requirements of UL 94 V-0.

### Applications

Typical applications include high frequency and high voltage applications requiring capacitors with extremely high current handling capability, i.e., high dV/dt values.

*ATTENTION -- This series was replaced by the R73 series. Please click on the link to the R73 series datasheet [HERE](#).*

### Benefits

- Rated voltage: 1,600 – 2,000 VDC
- Rated voltage: 650 – 700 VAC
- Capacitance range: 0.0001 – 0.022  $\mu$ F
- Lead spacing: 15 mm
- Capacitance tolerance:  $\pm$ 5%, other tolerances on request
- Climatic category: 55/105/56, IEC 60068-1
- Tape & Reel packaging in accordance with IEC 60286-2
- RoHS Compliant and lead-free terminations
- Category temperature range of -55°C to +105°C

### Customer Part Number

PHE448	R	B	4150	J	R06
Series	Rated Voltage (VDC)	Lead Spacing (mm)	Capacitance Code (pF)	Capacitance Tolerance	Packaging
Polypropylene Film/Foil	R = 1,600 S = 2,000	B = 15.0	The last three digits represent significant figures. The first digit specifies the total number of digits.	J = $\pm$ 5% Other tolerances on request	See Ordering Options Table

### KEMET Internal Part Number

**Note:** See Ordering Options Table for lead length (LL) options.

## Performance Characteristics

Voltage Range (VDC)	1,600	2,000
Voltage Range (VAC)	650	700
Capacitance Range ( $\mu\text{F}$ )	0.0015 – 0.022	0.0001 – 0.0033
Capacitance Values	In accordance with IEC E12 series	
Capacitance Tolerance	$\pm 5\%$ , other tolerances on request	
Category Temperature Range	$-55^{\circ}\text{C}$ to $+105^{\circ}\text{C}$	
Rated Temperature	$+85^{\circ}\text{C}$	
Voltage Derating	The rated voltage is decreased with $1.3\%/^{\circ}\text{C}$ between $+85^{\circ}\text{C}$ and $+105^{\circ}\text{C}$	
Climatic Category	IEC 60068-1, 55/105/56	
Dissipation Factor $\tan\delta$	Maximum Values at $+23^{\circ}\text{C}$	
	1 kHz	0.0003
	10 kHz	0.0005
	100 kHz	0.001
Insulation Resistance	Measured at $+23^{\circ}\text{C}$ , 100 VDC 60 seconds for $V_R < 500$ VDC and at 500 VDC for $V_R \geq 500$ VDC	
	Minimum Values Between Terminals	
	$\geq 100,000$ M $\Omega$	
	Minimum Values Between Terminals and Case	
		$\geq 100,000$ M $\Omega$

## Derating of $V_{\text{rms}}$ vs. Frequency, $+85^{\circ}\text{C}$ Ambient Temperature and $10^{\circ}\text{C}$ Internal Heating, Typical Values

(1) Insert lead and packaging code. See Order Options Table for available options.

(2) K = ±10% (only available tolerance).

## Soldering Process

The implementation of the RoHS directive has resulted in the selection of SnAgCu (SAC) alloys or SnCu alloys as primary solder. This has increased the liquidus temperature from that of 183°C for SnPb eutectic alloy to 217 – 221°C for the new alloys. As a result, the heat stress to the components, even in wave soldering, has increased considerably due to higher pre-heat and wave temperatures. Polypropylene capacitors are especially sensitive to heat (the melting point of polypropylene is 160 – 170°C). Wave soldering can be destructive, especially for mechanically small polypropylene capacitors (with lead spacing of 5 mm to 15 mm), and great care has to be taken during soldering. The recommended solder profiles from KEMET should be used. Please consult KEMET with any questions. In general, the wave soldering curve from IEC Publication 61760-1 Edition 2 serves as a solid guideline for successful soldering. Please see Figure 1.

Reflow soldering is not recommended for through-hole film capacitors. Exposing capacitors to a soldering profile in excess of the above the recommended limits may result to degradation or permanent damage to the capacitors.

Do not place the polypropylene capacitor through an adhesive curing oven to cure resin for surface mount components. Insert through-hole parts after the curing of surface mount parts. Consult KEMET to discuss the actual temperature profile in the oven, if through-hole components must pass through the adhesive curing process. A maximum two soldering cycles is recommended. Please allow time for the capacitor surface temperature to return to a normal temperature before the second soldering cycle.

### Manual Soldering Recommendations

Following is the recommendation for manual soldering with a soldering iron.

The soldering iron tip temperature should be set at 350°C (+10°C maximum) with the soldering duration not to exceed more than 3 seconds.

### Wave Soldering Recommendations

## Soldering Process cont.

### Wave Soldering Recommendations cont.

1. The table indicates the maximum set-up temperature of the soldering process  
Figure 1

Dielectric Film Material	Maximum Preheat Temperature			Maximum Peak Soldering Temperature	
	Capacitor Pitch ≤ 10 mm	Capacitor Pitch = 15 mm	Capacitor Pitch > 15 mm	Capacitor Pitch ≤ 15 mm	Capacitor Pitch > 15 mm
Polyester	130°C	130°C	130°C	270°C	270°C
Polypropylene	100°C	110°C	130°C	260°C	270°C
Paper	130°C	130°C	140°C	270°C	270°C
Polyphenylene Sulphide	150°C	150°C	160°C	270°C	270°C

2. The maximum temperature measured inside the capacitor:

Set the temperature so that inside the element the maximum temperature is below the limit:

Dielectric Film Material	Maximum temperature measured inside the element
Polyester	160°C
Polypropylene	110°C
Paper	160°C
Polyphenylene Sulphide	160°C

*Temperature monitored inside the capacitor.*

### Selective Soldering Recommendations

Selective dip soldering is a variation of reflow soldering. In this method, the printed circuit board with through-hole components to be soldered is preheated and transported over the solder bath as in normal flow soldering without touching the solder. When the board is over the bath, it is stopped and pre-designed solder pots are lifted from the bath with molten solder only at the places of the selected components, and pressed against the lower surface of the board to solder the components.

The temperature profile for selective soldering is similar to the double wave flow soldering outlined in this document, **however, instead of two baths, there is only one bath with a time from 3 to 10 seconds.** In selective soldering, the risk of overheating is greater than in double wave flow soldering, and great care must be taken so that the parts are not overheated.

Sprocket Hole/Cap Body	Nominal	$H_0$ (2)	18.5±0.5	18.5±0.5	18.5±0.5	18.5±0.5	18.5±0.5	18.5±0.5	18.5±0.5	18.0±2/-0
Sprocket Hole/Top of Cap Body	Maximum	$H_1$ (3)	32	31	43	43	43	58	58	58 Maximum

(1) Maximum cumulative feed hole error, 1 mm per 20 parts

(2) 16.5 mm available on request

(3) Depending on case size

(4) 15 mm available on request

# NOT FOR NEW DESIGN

Film Capacitors – General Purpose, Pulse and DC Transient Suppression  
PHE448 Polypropylene Film/Foil, Radial

**KEMET**  
a YAGEO company

## Lead Taping & Packaging (IEC 60286-2) cont.

### Ammo Specifications

Series	Dimensions (mm)		
	H	W	T
R4x, R4x+R, R7x, RSB	360	340	59
F5A, F5B, F5D			
F6xx, F8xx			
PHExxx, PMExxx, PMRxxx, SMR & PFR	330	330	50

### Reel Specifications

Series	Dimensions (mm)		
	D	H	W
R4x, R4x+R, R7x, RSB	355 500	30	55 (Max)
F5A, F5B, F5D		25	
F6xx, F8xx			
PHExxx, PMExxx, PMRxxx, SMR & PFR	360 500	30	46 (Max)

### Manufacturing Date Code (IEC-60062)

Y = Year, Z = Month			
Year	Code	Month	Code
2010	A	January	1
2011	B	February	2
2012	C	March	3
2013	D	April	4
2014	E	May	5
2015	F	June	6
2016	H	July	7
2017	J	August	8
2018	K	September	9
2019	L	October	0
2020	M	November	N
2021	N	December	D
2022	P		
2023	R		
2024	S		
2025	T		
2026	U		
2027	V		
2028	W		
2029	X		
2030	A

## Disclaimer

YAGEO Corporation and its affiliates do not recommend the use of commercial or automotive grade products for high reliability applications or manned space flight.

All product specifications, statements, information and data (collectively, the "Information") in this datasheet are subject to change. The customer is responsible for checking and verifying the extent to which the Information contained in this publication is applicable to an order at the time the order is placed. All Information given herein is believed to be accurate and reliable, but it is presented without guarantee, warranty, or responsibility of any kind, expressed or implied.

Statements of suitability for certain applications are based on KEMET Electronics Corporation's ("KEMET") knowledge of typical operating conditions for such applications, but are not intended to constitute – and KEMET specifically disclaims – any warranty concerning suitability for a specific customer application or use. The Information is intended for use only by customers who have the requisite experience and capability to determine the correct products for their application. Any technical advice inferred from this Information or otherwise provided by KEMET with reference to the use of KEMET's products is given gratis, and KEMET assumes no obligation or liability for the advice given or results obtained.

Although KEMET designs and manufactures its products to the most stringent quality and safety standards, given the current state of the art, isolated component failures may still occur. Accordingly, customer applications which require a high degree of reliability or safety should employ suitable designs or other safeguards (such as installation of protective circuitry or redundancies) in order to ensure that the failure of an electrical component does not result in a risk of personal injury or property damage.

Although all product-related warnings, cautions and notes must be observed, the customer should not assume that all safety measures are indicated or that other measures may not be required.

Additional information about production site flexibility can be found [here](#)
