

THE DATASHEET OF RCLAMP3654PATCT

PROTECTION PRODUCTS - RailClamp®

Description

RailClamp® TVS arrays are ultra low capacitance ESD protection devices designed to protect high speed data interfaces. This series has been specifically designed to protect sensitive components which are connected to high-speed data and transmission lines from overvoltage caused by **ESD** (electrostatic discharge), **CDE** (Cable Discharge Events), and **EFT** (electrical fast transients).

The RClamp®3654PA is specifically designed to protect portable devices that utilize the USB port for battery charging. The unique design of this device features low capacitance TVS diodes for protection of the USB data (DP, DM) and USB ID (accessory detect) pins operating up to 5 volts. Loading capacitance on these lines is <1pF for maximum signal integrity. An integrated 28 volt TVS diode is used for protection of the USB voltage bus. This ensures the device will remain in a high-impedance state during normal USB operation or when the battery is being charged. Leakage current of the VBus protection is <100nA when operating at 28 volts.

The RClamp3654PA is in a 6-pin SLP1616P6 package. It measures 1.6 x 1.6 x 0.60mm. The leads are spaced at a pitch of 0.5mm and are finished with lead-free NiPdAu. They may be used to meet the ESD immunity requirements of IEC 61000-4-2, Level 4 (15kV air, 8kV contact discharge).

Features

- ◆ Transient protection for high-speed data lines to **IEC 61000-4-2 (ESD) ±15kV (air), ±8kV (contact) IEC 61000-4-4 (EFT) 40A (5/50ns)**
- ◆ Array of surge rated diodes with internal TVS Diode
- ◆ Small package (1.6 x 1.6mm) saves board space
- ◆ Protects USB DP, DM, and ID Pin operating up to 5.5V
- ◆ Protects USB VBus operating up to 28V
- ◆ Low capacitance (**<1pF**) on DP, DM, and ID Pins
- ◆ No insertion loss to **2.0GHz**
- ◆ Low leakage current
- ◆ Low clamping voltage
- ◆ Large ground pad for increased ESD performance
- ◆ Solid-state silicon-avalanche technology

Mechanical Characteristics

- ◆ SLP1616P6 6L package
- ◆ Pb-Free, Halogen Free, RoHS/WEEE Compliant
- ◆ Nominal Dimensions: 1.6 x 1.6 x 0.60 mm
- ◆ Lead Finish: NiPdAu
- ◆ Molding compound flammability rating: UL 94V-0
- ◆ Marking : Marking code + two character date code
- ◆ Packaging : Tape and Reel

Applications

- ◆ USB 2.0
- ◆ USB OTG

Applications Information

Device Connection Options for Protecting One USB Port

USB Data and ID lines are connected at pins 1, 2, and 3. These inputs are referenced to an internal 5 volt TVS protection device. When the voltage on these lines exceeds 5 volts, the TVS will conduct. Pin 6 is connected to the USB voltage bus (VBus). This device will conduct when the voltage on the bus exceeds 28 volts. The center tab is connected to ground. The path length should also be kept as short as possible to minimize parasitic inductance. For best results, multiple micro-vias are recommended to the ground plane.

Figure 1- Pin Configuration & Circuit Diagram

Protecting USB Interfaces

The RClamp3654PA is optimized for use on systems that utilize the USB interface for battery charging. Low capacitance protection is provided for the USB data (DM, DP) and USB ID pins. The maximum capacitance on these lines is <math><1\text{pF}</math> for maximum signal integrity. All three lines are referenced to an internal 5 volt TVS device. A separate 28 volt TVS device is used for protection of the USB voltage bus. This allows battery charging without signal clipping. A typical example is shown in Figure 2.
