

SPI Serial Flash

25 Series

Product Brief

October 2010

Product Description

SPI serial flash is small, low-power flash memory that features a Serial Peripheral Interface (SPI) and pin-for-pin compatibility with industry-standard SPI EEPROM devices. Its small footprint reduces ASIC controller pin count and packaging costs, saves board space and keeps system costs down. Offering lower power consumption and fewer wires than parallel flash, SPI serial flash is the ideal cost-efficient data transfer solution.

The ever growing SST 25 Series family provides ultra-low power serial flash for battery-operated applications, and includes an 8-bump XFBGA Z-Scale™ package for enhanced reliability and performance in an even smaller size.
