

## 3.3V ECL ÷ 4 Divider

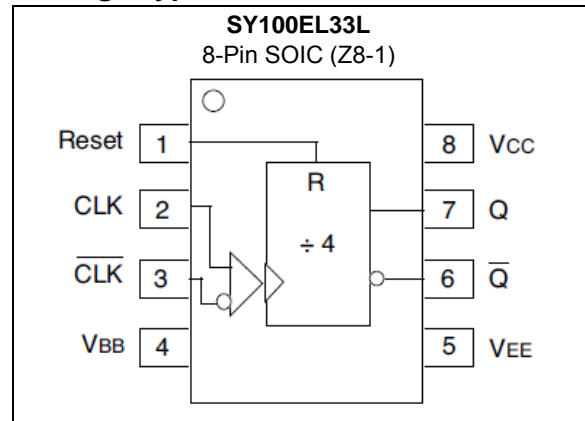

### Features

- 3.3V Power Supply
- 640ps Propagation Delay (typical)
- 4.2 GHz Toggle Frequency (typical)
- High Bandwidth Output Transitions
- Internal 75 k $\Omega$  Input Pull-Down Resistors
- Available in 8-Pin SOIC Package

### General Description

The SY100EL33L is an integrated  $\div 4$  divider. The differential clock inputs and the  $V_{BB}$  allow a differential, single-ended or AC-coupled interface to the device. If used, the  $V_{BB}$  output should be bypassed to ground with a 0.01 $\mu$ F capacitor. Also note that the  $V_{BB}$  is designed to be used as an input bias on the EL33L only; the  $V_{BB}$  output has limited current sink and source capability. The Reset pin is asynchronous and is asserted on the rising edge. Upon power-up, the internal flip-flops will attain a random state; the Reset input allows for the synchronization of multiple EL33Ls in a system.

## APPENDIX A: REVISION HISTORY

### Revision A (September 2018)

- Converted Micrel document SY100EL33L to Microchip data sheet DS20006076A.
- Minor text changes throughout.
- Removed all reference to the EOL SY10EL33 and SY100EL33 versions.

---

**Note the following details of the code protection feature on Microchip devices:**

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as “unbreakable.”

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.
