

# THE DATASHEET OF VN751STR

## Description

The VN751S is a monolithic device developed using STMicroelectronics' VIPower technology, intended to drive any kind of load with one side connected to ground. Active  $V_{CC}$  pin voltage clamp protects the device against low energy spikes. Active current limitation combined with thermal shutdown and automatic restart protect the device against overload. The device automatically turns off in case of ground pin disconnection. This device is especially suitable for industrial applications in conformity with IEC 61131-2 programmable controller international standard.

## Features

- $R_{DS(on)}$ : 60 m $\Omega$
- $I_{OUT}$ : 2.5 A
- $V_{CC}$ : 36 V
- CMOS compatible input
- Thermal shutdown
- Shorted load protection
- Undervoltage and overvoltage shutdown
- Protection against loss of ground
- Very low standby current
- Compliance to 61000-4-4 IEC test up to 4 kV
- Open drain status output
- Fast demagnetization of inductive loads

### 3 Maximum ratings

**Table 2. Absolute maximum ratings**

Symbol	Parameter	Value	Unit
$V_{CC}$	DC supply voltage	45	V
$-V_{CC}$	Reverse DC supply voltage	-0.3	V
$-I_{GND}$	DC reverse ground pin current	-200	mA
$I_{OUT}$	DC output current	Internally limited	A
$-I_{OUT}$	Reverse DC output current	-5	A
$I_{IN}$	DC input current	-1 to +10	mA
$I_{STAT}$	DC status current	-1 to +10	mA
$V_{ESD}$	Electrostatic discharge (R = 1.5 k $\Omega$ ; C = 100 pF)	5000	V
$E_{AS}$	Single pulse avalanche energy ( $T_{amb} = 125\text{ }^{\circ}\text{C}$ , $V_{CC} = 24\text{ V}$ , $I_{load} = 2.0\text{ A}$ )	650	mJ
$P_{TOT}$	Power dissipation at $T_C = 25\text{ }^{\circ}\text{C}$	Internally limited	W
$T_J$	Junction operating temperature	Internally limited	$^{\circ}\text{C}$
$T_C$	Case operating temperature	-40 to 150	$^{\circ}\text{C}$
$T_{STG}$	Storage temperature	-55 to 150	$^{\circ}\text{C}$

**Table 3. Thermal data**

Symbol	Parameter	Value	Unit
$R_{th(JC)}$	Thermal resistance junction-case	Max. 15	$^{\circ}\text{C}/\text{W}$
$R_{th(JA)}$	Thermal resistance junction-ambient	Max. 93 <sup>(1)</sup>	$^{\circ}\text{C}/\text{W}$
		82 <sup>(2)</sup>	

1. When mounted on a standard single-sided FR-4 board with 0.5 cm<sup>2</sup> of Cu (at least 35  $\mu\text{m}$ ) thick connected to all VCC pins. Horizontal mounting and no artificial air flow.
2. When mounted on a standard single-sided FR-4 board with 2 cm<sup>2</sup> of Cu (at least 35  $\mu\text{m}$ ) thick connected to all VCC pins. Horizontal mounting and no artificial air flow.

## 4 Electrical characteristics

8 V < V<sub>CC</sub> < 36 V; -40 °C < T<sub>J</sub> < 125 °C; unless otherwise specified.

**Table 4. Power section**

Figure 8. Application schematic

## 8 Reverse polarity protection

A schematic solution to protect the IC against a reverse polarity condition is proposed.

This schematic is effective with any type of load connected to the outputs of the IC. The  $R_{GND}$  resistor value can be selected according to the following conditions:

### Equation 1

$$R_{GND} \leq 600 \text{ mV} / (I_S \text{ in ON-state max.})$$

### Equation 2

$$R_{GND} \geq (-V_{CC}) / (-I_{GND})$$

where  $-I_{GND}$  is the DC reverse ground pin current and can be found in [Section 3: Maximum ratings on page 7](#).

The power dissipation associated to  $R_{GND}$  during reverse polarity condition is:

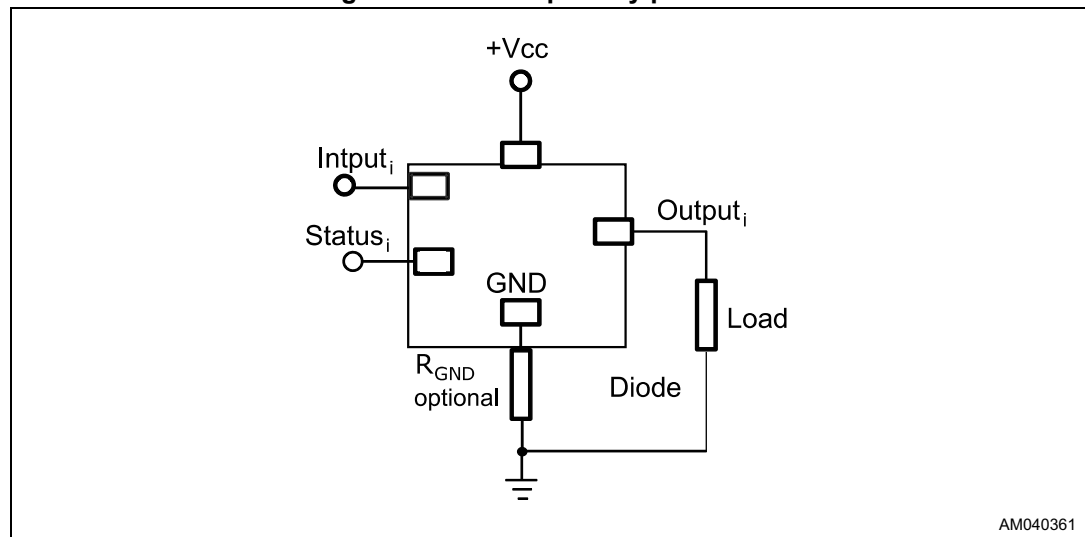

### Equation 3

$$P_D = (-V_{CC})^2 / R_{GND}$$

This resistor can be shared by several different ICs.

In such case  $I_S$  value in [Equation 1](#) is the sum of the maximum ON-state currents of the different devices. Please note that if the microprocessor ground and the device ground are separated, the voltage drop across the  $R_{GND}$  (given by  $I_S \text{ in ON-state max.} * R_{GND}$ ) produces a difference between the generated input level and the IC input signal level. This voltage drop varies depending on how many devices are ON in case of several high-side switches sharing the same  $R_{GND}$ .

**Figure 9. Reverse polarity protection**

## 9 Active VDS clamp

The active clamp is also known as the fast demagnetization of inductive loads or fast current decay. When a high-side driver turns off an inductance, an undervoltage is detected on the output.

The OUT pin is pulled down to  $V_{demag}$ . The conduction state is modulated by internal circuitry in order to keep the OUT pin voltage at about  $V_{demag}$  until the load energy has been dissipated. The energy is dissipated both in the IC internal switch and in load resistance.

**Figure 10. Active clamp equivalent principle schematic**

Figure 11. Fast demagnetization waveforms

The demagnetization of the inductive load causes a huge electrical and thermal stress to the IC. The curve plotted in [Figure 12](#) shows the maximum demagnetization energy that the IC can support in a single demagnetization pulse with  $V_{CC} = 24 \text{ V}$  and  $T_{AMB} = 125 \text{ }^\circ\text{C}$ . If higher demagnetization energy is required then an external free-wheeling Schottky diode has to be connected between OUT (cathode) and GND (anode) pins. Note that in this case the fast demagnetization is inhibited.

Figure 12. Typical demagnetization energy (single pulse)  
at  $V_{CC} = 24\text{ V}$  and  $T_{AMB} = 125\text{ }^{\circ}\text{C}$

# 10 Package information

In order to meet environmental requirements, ST offers these devices in different grades of ECOPACK® packages, depending on their level of environmental compliance. ECOPACK® specifications, grade definitions and product status are available at: [www.st.com](http://www.st.com). ECOPACK® is an ST trademark.

# 11 Revision history

**Table 12. Document revision history**

Date	Revision	Changes
18-Sep-2006	1	Initial release.
12-Mar-2007	2	Document reformatted, typo in table 3, updated $P_{tot}$ value in table 2.
15-Mar-2007	3	Typo in table 1 $V_{ESD}$ .
18-Sep-2007	4	Added $I_{STAT}$ value in table 1.
11-Oct-2007	5	Updated table 2.
08-Jul-2008	6	Added section 7.
30-Nov-2009	7	Updated cover page and section 6.
12-Jul-2016	8	Updated Table 4: "Power section".
09-May-2018	9	Updated <a href="#">Section : Features on page 1</a> (added "Fast demagnetization of inductive loads"). Updated <a href="#">Table 2 on page 7</a> (Updated $E_{AS}$ parameter and value). Updated <a href="#">Figure 8 on page 13</a> [removed "Nominal 2A LOAD and 270mH (SO8) 400mH (PPAK)"]. Added <a href="#">Section 9 on page 15</a> . Minor modifications throughout document.
