THE DATASHEET OF

ACB2012M-040-T

EMC Components

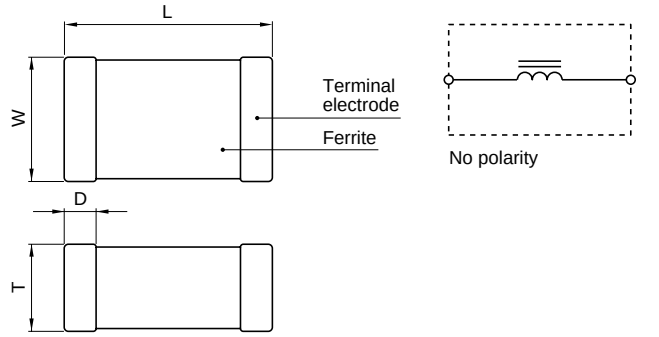
Ferrite Beads
SMD

ACB Series

FEATURES

- The ACB series provide effective EMC suppression in signal lines through simple in-series implementation. It is thus ideal for circuits in which it is difficult to bypass high-frequency components to ground.
- Reflection components are highly suppressed through the use of a special ferrite material and an advanced internal structure that minimizes stray capacitance. This product is, therefore, an excellent countermeasure for noise radiation in high-speed digital signal lines.
- The ultra-miniature 1.6 × 0.8 mm part exhibits a 600Ω impedance at 100MHz, which is the larger type 2012.
- Both the 1608 and 2012 types are available in a large number of impedance values. Different characteristics can thus be achieved without changing PC board land patterns.

SHAPES AND DIMENSIONS/CIRCUIT DIAGRAM



Dimensions in mm

Shape	L	W	T	D
1608	1.6±0.15	0.8+0.3, –0.1	0.8+0.3, –0.1	0.3±0.2
2012	2±0.2	1.25±0.2	0.9±0.2	0.4±0.2
