## UL Recognized Filtered Terminal Blocks

### Application

Recognized by UL, the TUSONIX Filtered Terminal Block is specifically designed to save time and money for EMI filtering applications.

By combining a filtering component with an industry standard terminal block, TUSONIX has created an effective barrier to EMI noise. TUSONIX' Filtered Terminal Blocks allow the engineer to eliminate EMI using an existing mechanical design concept.

TUSONIX' commitment to excellence and service allows for customization of the filtered terminal blocks to meet your specific EMC qualifications.

Backed by decades of ceramic component production experience, TUSONIX Filtered Terminal Blocks will meet or exceed your demanding application requirements.

### Benefits

- Saves Labor and Space
- Consistent Panel Layout
- Solves EMI Problems
- Meets Specific Requirements

### Features

- Filter Integral to Block
- Industry Standard Block
- Wide Range of Performance
- Customization

### Practical Applications

- Telecommunications
- Computer and Peripheral Equipment
- Industrial Process Control Equipment
- Power Supplies
- Office and Lab Equipment

The TUSONIX Terminal Blocks listed in this Catalog are Recognized to UL Standard 1283 for the EMI Filter and UL Standard 1059 for the Terminal Block.

## Filtered Terminal Block Specifications

### 1.0 Scope

This specification describes the basic performance requirements of TUSONIX Filtered Terminal Blocks.

### 2.0 Capacitance

Measurement Conditions: Capacitance measured at  $25^{\circ}\pm 2^{\circ}\text{C}$ , 50% max R.H. and Frequency of 1 KHz @  $1\pm 0.2\text{VRMS}$ .

### 3.0 Insertion Loss

- 3.1 Measurement Conditions: Insertion Loss values listed are measured in a 50W system at  $25^{\circ}\text{C}\pm 2^{\circ}\text{C}$  under no-load conditions.
- 3.2 Insertion Loss: The Insertion Loss values listed are typical values for both 500 and 600 styles under indicated conditions.
- 3.3 Listed Insertion Loss data is a measurement of filter performance in a matched 50W system. It is highly recommended that filter performance be verified under actual circuit operation conditions.

### 4.0 Operating Conditions

Filters are designed to operate continuously at the voltage and current that is stated for each TUSONIX part number. If the operating ambient temperature is significantly higher than  $25^{\circ}\text{C}$ , the terminal blocks should be installed in equipment and tested under actual conditions to ensure that maximum temperatures are not exceeded.

### 5.0 Dielectric Withstanding Voltage

Filters shall withstand the specified voltage applied between the screw terminal and ground plane for one minute. Surge current shall be limited to a maximum of 50mA.

### 6.0 Insulation Resistance

Measured at  $25^{\circ}\text{C}\pm 2^{\circ}\text{C}$  with 100VDC and charging current limited to 50mA max. The IR, after two minutes maximum application of the test voltage, shall be a minimum of 10 G $\Omega$ .

## Product Installation Recommendations

### Product Installation Recommendations

The components in this catalog are manufactured with ceramic dielectrics. To minimize possible damage to the components during installation, the recommendations below should be followed. For information concerning other installation requirements and/or component modifications, consult TUSONIX Customer Engineering at (520) 744-0400.

#### General Recommendations

**Handling:** Excessive force or direct impact to the component may result in breakage. Lead bending or cutting, if necessary, should be done with a support for the lead to prevent mechanical stress to the component. Components with required lead modifications are available from TUSONIX.

**Lead Soldering:** Use a temperature controlled soldering iron with SN60 or SN63 RMA Flux core wire. Maximum soldering temperature to be 500°F(260°C) with a dwell time of 3 seconds maximum. The use of a heat sink between the component body and the solder joint is highly recommended.

**Flux Removal:** Optimum flux removal can be achieved by vapor degreasing the components immediately after the soldering operation. Total immersion of the components is not recommended.
