

**THE DATASHEET OF  
MCP2551T-E/SN**

### Description

The SP490E is a low power differential line driver/receiver meeting RS-485 and RS-422 standards up to 10Mbps. The SP491E is identical to the SP490E with the addition of driver and receiver tri-state enable lines. Both products feature  $\pm 200\text{mV}$  receiver input sensitivity, over wide common mode range. The SP490E is available in 8-pin NSOIC packages for operation over the commercial and industrial temperature ranges. The SP491E is available in 14-pin NSOIC packages for operation over the commercial and industrial temperature ranges.

### FEATURES

- 5V only
- Low power BiCMOS
- Driver/receiver enable (SP491E)
- RS-485 and RS-422 drivers/receivers
- Pin compatible with LTC490 and SN75179 (SP490E)
- Pin compatible with LTC491 and SN75180 (SP491E)
- Improved ESD specifications:
  - $\pm 15\text{kV}$  Human Body Model
  - $\pm 15\text{kV}$  IEC61000-4-2 Air Discharge

## Description

The SP490E and SP491E are full-duplex differential transceivers that meet the requirements of RS-485 and RS-422. Fabricated with a MaxLinear proprietary BiCMOS process, both products require a fraction of the power of older bipolar designs.

The RS-485 standard is ideal for multi-drop applications or for long-distance interfaces. RS-485 allows up to 32 drivers and 32 receivers to be connected to a data bus, making it an ideal choice for multi-drop applications. Since the cabling can be as long as 4,000 feet, RS-485 transceivers are equipped with a wide (-7V to 12V) common mode range to accommodate ground potential differences. Because RS-485 is a differential interface, data is virtually immune to noise in the transmission line.

### Drivers

The drivers for both the SP490E and SP491E have differential outputs. The typical voltage output swing with no load will be 0 volts to +5 volts. With worst case loading of  $54\Omega$  across the differential outputs, the driver can maintain greater than 1.5V voltage levels.

The driver of the SP491E has a driver enable control line which is active high. A logic high on DE (pin 4) of the SP491E will enable the differential driver outputs. A logic low on DE (pin 4) of the SP491E will tri-state the driver outputs. The SP490E does not have a driver enable.

### Receivers

The receivers for both the SP490E and SP491E have differential inputs with an input sensitivity as low as  $\pm 200\text{mV}$ . Input impedance of the receivers is typically  $15\text{k}\Omega$  ( $12\text{k}\Omega$  minimum). A wide common mode range of -7V to 12V allows for large ground potential differences between systems. The receivers for both the SP490E and SP491E are equipped with the fail-safe feature. Fail-safe guarantees that the receiver output will be in a high state when the input is left unconnected.

The receiver of the SP491E has a receiver enable control line which is active low. A logic low on  $\overline{\text{RE}}$  (pin 3) of the SP491E will enable the differential receiver. A logic high on  $\overline{\text{RE}}$  (pin 3) of the SP491E will tri-state the receiver.

## Revision History

Revision	Date	Description
14	2000	Sipex Legacy Data Sheet
1.0.0	May 2011	Convert to Exar format. Remove driver propagation delay minimum and driver rise/fall time minimum entry for SP490E and SP491E. Update ESD rating to IEC61000-4-2. Update ordering information.
1.0.1	May 2013	Correct type errors per PCN 13-0503-01
1.0.2	February 2018	Updated to MaxLinear logo. Remove GND from Differential Output Voltage min (page 2 & 5). Update format and ordering information table. Added Pin Function section. Removed obsolete PDIP from description, mechanical and mechanical drawings.
