DG9434DQ-T1-E3**

Low-Voltage Dual SPST Analog Switch

DESCRIPTION

The DG9432, DG9433, DG9434 is a dual single-pole/single-throw monolithic CMOS analog switch designed for high performance switching of analog signals. Combining low power, high speed (t_{ON} : 25 ns, t_{OFF} : 20 ns), the DG9432, DG9433, DG9434 is ideal for portable and battery powered applications requiring high performance and efficient use of board space.

The DG9432, DG9433, DG9434 is built on Vishay Siliconix's low voltage BCD-15 process. An epitaxial layer prevents latchup. Break-before-make is guaranteed for DG9432, DG9433, DG9434.

Each switch conducts equally well in both directions when on, and blocks up to the power supply level when off.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.
