

**THE DATASHEET OF  
MAX4472EUD+**

# Single/Dual/Quad, +1.8V/750nA, SC70, Rail-to-Rail Op Amps

## General Description

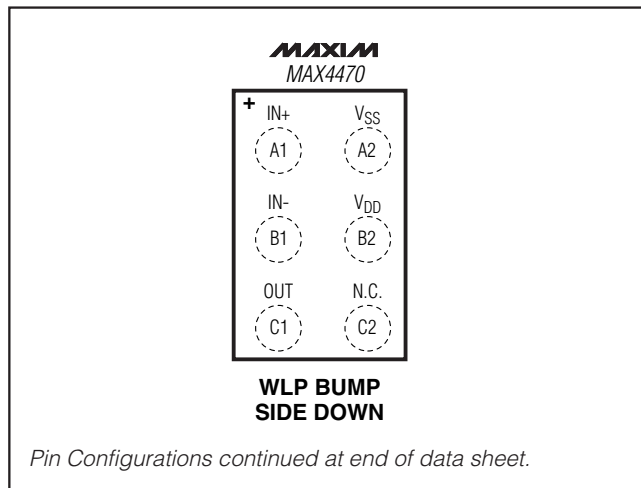

The MAX4464/MAX4470/MAX4471/MAX4472/MAX4474 family of micropower op amps operate from a single +1.8V to +5.5V supply and draw only 750nA of supply current. The MAX4470 family feature ground-sensing inputs and rail-to-rail output. The ultra-low supply current, low-operating voltage, and rail-to-rail output capabilities make these operational amplifiers ideal for use in single lithium ion (Li+), or two-cell NiCd or alkaline battery systems.

The rail-to-rail output stage of the MAX4464/MAX4470/MAX4471/MAX4472/MAX4474 amplifiers is capable of driving the output voltage to within 4mV of the rail with a 100kΩ load, and can sink and source 11mA with a +5V supply. These amplifiers are available in both fully compensated and decompensated versions. The single MAX4470, dual MAX4471, and the quad MAX4472 are unity-gain stable. The single MAX4464 and the dual MAX4474 are stable for closed-loop gain configurations of  $\geq +5V/V$ . These amplifiers are available in space-saving WLP, SC70, SOT23,  $\mu$ MAX®, and TSSOP packages.

## Applications

Battery-Powered Systems	Electrometer Amplifiers
Portable Instrumentation	Solar-Powered Systems
Pagers and Cellphones	Remote Sensor Active Badges
Micropower Thermostats	pH Meters

## Pin Configurations

$\mu$ MAX is a registered trademark of Maxim Integrated Products, Inc.

## Features

- ◆ Ultra-Low 750nA Supply Current Per Amplifier
- ◆ Ultra-Low +1.8V Supply Voltage Operation
- ◆ Ground-Sensing Input Common-Mode Range
- ◆ Outputs Swing Rail-to-Rail
- ◆ Outputs Source and Sink 11mA of Load Current
- ◆ No Phase Reversal for Overdriven Inputs
- ◆ High 120dB Open-Loop Voltage Gain
- ◆ Low 500 $\mu$ V Input Offset Voltage
- ◆ 9kHz Gain-Bandwidth Product (MAX4470/MAX4471/MAX4472)
- ◆ 40kHz Gain-Bandwidth Product (MAX4464/MAX4474)
- ◆ 250pF (min) Capacitive Load Capability
- ◆ Available in Tiny, 6-Bump WLP, 5-Pin SC70, and 8-Pin SOT23 Packages

## Ordering Information

8-Pin μMAX (derate 4.5mW/°C above +70°C).....	.362mW		

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

## Applications Information

### Ground Sensing

The common-mode input range of the MAX4470 family extends down to ground, and offers excellent common-mode rejection. These devices are guaranteed not to undergo phase reversal when the input is overdriven.

### Power Supplies and Layout

The MAX4470 family operates from a single +1.8V to +5.5V power supply. Bypass power supplies with a 0.1µF ceramic capacitor placed close to the V<sub>DD</sub> pin.

Ground layout improves performance by decreasing the amount of stray capacitance and noise at the op amp's inputs and outputs. To decrease stray capacitance, minimize PC board lengths and resistor leads, and place external components close to the op amps' pins.

### Bandwidth

The MAX4470/MAX4471/MAX4472 are internally compensated for unity-gain stability and have a typical gain-bandwidth of 9kHz. The MAX4464/MAX4474 have a 40kHz typical gain-bandwidth and are stable for a gain of +5V/V or greater.

### Stability

The MAX4464/MAX4470/MAX4471/MAX4472/MAX4474 maintain stability in their minimum gain configuration while driving capacitive loads. Although this product family is primarily designed for low-frequency applications, good layout is extremely important because low-power requirements demand high-impedance circuits. The layout should also minimize stray capacitance at the amplifier inputs. However some stray capacitance may be unavoidable, and it may be necessary to add a 2pF to 10pF capacitor across the feedback resistor as shown in Figure 1. Select the smallest capacitor value that ensures stability.

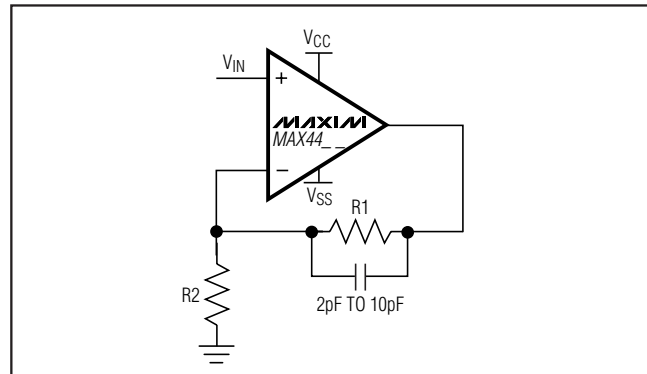

Figure 1. Compensation for Feedback Node Capacitance

5. COPLANARITY 4 MILS. MAX.  
6. MARKING IS FOR PACKAGE ORIENTATION REFERENCE ONLY.  
7. SOLDER THICKNESS MEASURED AT FLAT SECTION OF LEAD BETWEEN 0.08mm AND 0.15mm FROM LEAD TIP.  
8. MEETS JEDEC MO178 VARIATION BA.  
9. ALL DIMENSIONS APPLY TO BOTH LEADED (-) AND LEAD FREE (+) PACKAGE CODES.
