THE DATASHEET OF

NB100ELT23LDR2G

NB100ELT23L

3.3V Dual Differential LVPECL/LVDS to LVTTL Translator

The NB100ELT23L is a dual differential LVPECL/LVDS to LVTTL translator. Because LVPECL (Positive ECL) or LVDS levels are used, only +3.3 V and ground are required. The small outline 8-lead package and the dual gate design of the ELT23L makes it ideal for applications which require the translation of a clock and a data signal.

The ELT23L is available in only the ECL 100K standard. Since there are no LVPECL outputs or an external V_{BB} reference, the ELT23L does not require both ECL standard versions. The LVPECL inputs are differential. Therefore, the NB100ELT23L can accept any standard differential LVPECL/LVDS input referenced from a V_{CC} of +3.3 V.
