

**THE DATASHEET OF  
ISL28230FUZ**

ISL28130, ISL28230, ISL28430

Single, Dual, and Quad Micropower, Low Drift, RRIO Operational Amplifiers

FN7623  
Rev 7.00  
February 13, 2014

The ISL28130, ISL28230 and ISL28430 are single, dual and quad micropower, low offset drift operational amplifiers that are optimized for single and dual supply operation from 1.8V to 5.5V and  $\pm 0.9V$  to  $\pm 2.75V$ . Their low supply current of  $20\mu A$  and rail-to-rail input/output enable the ISL28130, ISL28230, and ISL28430 to be an excellent general-purpose op amp for a range of applications. The ISL28130, ISL28230 and ISL28430 are ideal for handheld devices that operate off 2AA or single Li-ion batteries.

The ISL28130 is available in industry standard pinouts for 5 Ld SOT-23, 5 Ld SC70 and 8 Ld SOIC packages. The ISL28230 is available in industry standard pinouts for 8 Ld MSOP, 8 Ld SOIC and 8 Ld DFN packages. The ISL28430 is available in 14 Ld TSSOP and 14 Ld SOIC packages. Commercial devices operate over the temperature range of  $0^{\circ}C$  to  $70^{\circ}C$ . Full temperature range devices operate over the temperature range of  $-40^{\circ}C$  to  $125^{\circ}C$ .

Features

- Low input offset voltage .....  $40\mu V$ , Max.
- Low offset drift .....  $150nV/^{\circ}C$ , Max.
- Input bias current .....  $250pA$ , Max.
- Quiescent current (per amplifier) .....  $20\mu A$ , Typ.
- Single supply range .....  $+1.8V$  to  $+5.5V$
- Dual supply range .....  $\pm 0.9V$  to  $\pm 2.75V$
- Low noise (0.01Hz to 10Hz) .....  $1.1\mu V_{P-P}$ , Typ.
- Rail-to-rail inputs and output

Applications

- Bi-directional current sense
- Temperature measurement
- Medical equipment
- Electronic weigh scales
- Precision/strain gauge sensor
- Precision regulation
- Low Ohmic current sense
- High gain analog front ends

BI-DIRECTIONAL CURRENT SENSE AMPLIFIER

### NOTES:

1. Add "-T\*" suffix for tape and reel. Please refer to [TB347](#) for details on reel specifications.
2. Please refer to [TB347](#) for details on reel specifications.
3. These Intersil Pb-free plastic packaged products employ special Pb-free material sets, molding compounds/die attach materials, and 100% matte tin plate plus anneal (e3 termination finish, which is RoHS compliant and compatible with both SnPb and Pb-free soldering operations). Intersil Pb-free products are MSL classified at Pb-free peak reflow temperatures that meet or exceed the Pb-free requirements of IPC/JEDEC J STD-020.
4. For Moisture Sensitivity Level (MSL), please see device information page for [ISL28130](#), [ISL28230](#), [ISL28430](#). For more information on MSL please see Tech Brief [TB363](#).
5. The part marking is located on the bottom of the part.

Maximum Storage Temperature Range .....	-65°C to +150°C	
Pb-Free Reflow Profile .....	see link below <a href="http://www.intersil.com/pbfree/Pb-FreeReflow.asp">http://www.intersil.com/pbfree/Pb-FreeReflow.asp</a>	

## Operating Conditions

Temperature Range	
Full Grade Devices .....	-40°C to +125°C
Commercial Grade Devices .....	0°C to +70°C

**CAUTION:** Do not operate at or near the maximum ratings listed for extended periods of time. Exposure to such conditions may adversely impact product reliability and result in failures not covered by warranty.

### NOTES:

- $\theta_{JA}$  is measured with the component mounted on a high effective thermal conductivity test board in free air. See Tech Brief [TB379](#) for details.
- $\theta_{JA}$  is measured in free air with the component mounted on a high effective thermal conductivity test board with "direct attach" features. See Tech Brief [TB379](#).
- For  $\theta_{JC}$ , the "case temp" location is taken at the package top center.
- For  $\theta_{JC}$ , the "case temp" location is the center of the exposed metal pad on the package underside.

## Applications Information

### Functional Description

The ISL28130, ISL28230 and ISL28430 are low offset and low drift operational amplifiers with a very high open loop gain (150dB) and rail-to-rail input/output. They are designed to operate on a single supply range of 1.8V to 5.5V or a dual supply range of  $\pm 0.9V$  to  $\pm 2.75V$  while consuming only 20 $\mu A$  of supply current per channel. The ISL28130, ISL28230 and ISL28430 have a 400kHz gain-bandwidth.

The high open loop gain, low offset voltage, high bandwidth and low 1/f noise make the ISL28130, ISL28230 and ISL28430 ideal for precision applications.

### Rail-to-rail Input and Output (RRIO)

The RRIO CMOS amplifier uses parallel input PMOS and NMOS that enable the inputs to swing 100mV beyond either supply rail. The inverting and non-inverting inputs do not have back-to-back input clamp diodes and are capable of maintaining high input impedance at high differential input voltages. This is effective in eliminating output distortion caused by high slew rate input signals.

The output stage uses common source connected PMOS and NMOS devices to achieve rail-to-rail output drive capability with 15mA current limit and the capability to swing to within 50mV of either rail while driving a 10k $\Omega$  load.

### IN+ and IN- Protection

All input terminals have internal ESD protection diodes to both positive and negative supply rails, limiting the input voltage to within one diode beyond the supply rails. For applications in which either input is expected to exceed the rails by 0.5V, an external series resistor must be used to ensure the input currents never exceed 20mA (see Figure 23).

FIGURE 23. INPUT CURRENT LIMITING

### Layout Guidelines for High Impedance Inputs

To achieve maximum performance from the high input impedance and low offset voltage of the ISL28130, ISL28230 and ISL28430 amplifiers, care should be taken in the circuit board layout. The PC board surface must remain clean and free of moisture to avoid leakage currents between adjacent traces. Surface coating of the circuit board reduces surface moisture and provides a humidity barrier, reducing parasitic resistance on the board.

### High Gain, Precision DC-Coupled Amplifier

The circuit in Figure 24 implements a single-stage DC-coupled amplifier with an input DC sensitivity of under 100nV that is only possible using a low VOS amplifier with high open loop gain. High gain DC amplifiers operating from low voltage supplies are not practical using typical low offset precision op amps. For example, consider a typical precision amplifier in a gain of 10kV/V. A low offset op amp with  $\pm 100\mu V$   $V_{OS}$  and 0.5 $\mu V/^\circ C$  offset drift yields a DC error of  $>1V$ , with an additional 5mV/ $^\circ C$  of temperature-dependent error. This amount of error makes it difficult to resolve DC input voltage changes in the mV range.

The  $\pm 40\mu V$  max  $V_{OS}$  and 150nV/ $^\circ C$  temperature drift of the ISL28130, ISL28230, and ISL28430 produce a temperature-stable maximum DC output error of only  $\pm 400mV$ , with a maximum output temperature drift of 1.5mV/ $^\circ C$ . The additional benefit of a very low 1/f noise corner frequency and some feedback filtering allows DC voltages and voltage fluctuations well below 10 $\mu V$  to be easily detected with a simple, single-stage amplifier.

DATE	REVISION	CHANGE
February 13, 2014	FN7623.7	Ordering information table on page 2: Added part number ISL28230FRZ - Absolute Maximum Ratings table on page 5: changed Max Voltage VOUT to GND (10s) : from $\pm 3.0V$ to: (V- - 0.5V) to (V+ + 0.5V)V..
November 22, 2013	FN7623.6	Removed "Coming Soon" from ISL28430FBZ in "Ordering Information" on page 2.
November 8, 2012	FN7623.5	Removed "Coming Soon" from ISL28130FHZ-T7, ISL28130FEZ-T7, ISL28130CBZ, ISL28130FBZ, ISL28230FUZ, ISL28230FRZ, ISL28430FVZ, ISL28230FRZ, ISL28130CBZ and ISL28130FBZ in "Ordering Information" on page 2.
February 10, 2012	FN7623.4	Removed "Coming Soon" from ISL28230FBZ in "Ordering Information" on page 2.
June 13, 2011	FN7623.3	<ul style="list-style-type: none"> <li>Changed minimum operating supply voltage from +1.65V to +1.8V throughout datasheet. Modified Electrical Specifications table, beginning on page 5, for all specs related at +1.65V to +1.8V, and all other text references accordingly.</li> <li>On page 1, paragraph 2, last sentence: changed from "All devices operate over the temperature range of -40 °C to +125 °C." to "Commercial temp range devices operate over the temperature range of 0 °C to 70 °C. Full temp range devices operate over the temperature range of -40 °C to 125 °C."</li> <li>On page 2, Ordering Information: added "Coming Soon" to all devices with -40 °C to 125 °C temp range and to ISL28130CBZ at 0 °C to +70 °C temp range.</li> </ul>
March 1, 2011	FN7623.2	<ul style="list-style-type: none"> <li>-Ordering Information Table: Removed all 'Coming Soon' under part numbers (except for ISL28130FBZ and ISL28230FRZ), added part markings for all 125 °C grade parts. Added new data column called 'TEMPERATURE GRADE' to distinguish between 'Commercial' and 'Full' temp grades.</li> <li>- Electrical Specifications Table: added new text to common conditions: "Boldface limits apply over the entire operating temperature range". This note allows bold face limits to apply both to commercial and full grade temp devices.</li> <li>- Added over temperature 0 °C to 70 °C spec for Vos in addition to -40 °C to 125 °C Vos spec. Original Vos spec of 46.8<math>\mu</math>V for -40 °C to 125 °C is a typo based on a TCvos of 150nV/C. -40 °C to 125 °C limit corrected as 55<math>\mu</math>V over temp.</li> </ul>
December 7, 2010	FN7623.1	Corrected Thermals for DFN package in "Tja from 125 to 53, "Tjc from 90 to 12"
December 3, 2010		Removed Part Markings from Full temp grade parts and changed to TBD until availability is validated.
December 2, 2010		<ul style="list-style-type: none"> <li>-Updated front page text to add DFN packaging and extended temp range -40 °C to +125 °C</li> <li>-Removed previous Ib vs Temp plot and added new -40 °C to +125 °C Ib vs Temp plot on front page.</li> <li>-Updated ordering information table by adding a full temp range option to all parts and temp range column. Also added in DFN part to ordering table. All full temp parts are stamped Coming Soon.</li> <li>-Added DFN package to Pin Configurations table.</li> <li>-Added -40 °C to +125 °C temp range under Operating Conditions page 5.</li> <li>-Added the testing standards performance information to the ESD ratings in Abs Max Table</li> <li>-Added new Input Bias Current Ib spec of 700pA MIN/MAX in Electrical Spec table for -40 °C to +125 °C temp range</li> <li>-Revised Note 10 for Electrical Spec table as: "Compliance to datasheet limits is assured by one or more methods: production test, characterization and/or design."</li> <li>-Updated all curves in the datasheet with 0 °C to +70 °C temp range to -40 °C to +125 °C temp range.</li> <li>-Added DFN package L8.3x3J outline drawing to the end of datasheet.</li> </ul>
October 19, 2010		On page 6 changed "Supply Current, Per Amplifier" from a typical of 18 $\mu$ A to 20 $\mu$ A to comply with front page.
August 17, 2010	FN7623.0	Initial Release

## About Intersil

Intersil Corporation is a leader in the design and manufacture of high-performance analog, mixed-signal and power management semiconductors. The company's products address some of the largest markets within the industrial and infrastructure, personal computing and high-end consumer markets. For more information about Intersil, visit our website at [www.intersil.com](http://www.intersil.com).

For the most updated datasheet, application notes, related documentation and related parts, please see the respective product information page found at [www.intersil.com](http://www.intersil.com). You may report errors or suggestions for improving this datasheet by visiting [www.intersil.com/en/support/ask-an-expert.html](http://www.intersil.com/en/support/ask-an-expert.html). Rev. 3 7/07

NOTES:

1. Dimensioning and tolerances per ASME Y14.5M-1994.
2. Package conforms to EIAJ SC70 and JEDEC MO-203AA.
3. Dimensions D and E1 are exclusive of mold flash, protrusions, or gate burrs.
4. Footlength L measured at reference to gauge plane.
5. "N" is the number of terminal positions.
6. These Dimensions apply to the flat section of the lead between 0.08mm and 0.15mm from the lead tip.
7. Controlling dimension: MILLIMETER. Converted inch dimensions are for reference only.

## M8.118A

8 LEAD MINI SMALL OUTLINE PLASTIC PACKAGE (MSOP)

Rev 0, 9/09

TOP VIEW

SIDE VIEW 1

TYPICAL RECOMMENDED LAND PATTERN

NOTES:

1. Dimensions are in millimeters.
2. Dimensioning and tolerancing conform to JEDEC MO-187-AA and AMSE Y14.5m-1994.
3. Plastic or metal protrusions of 0.15mm max per side are not included.
4. Plastic interlead protrusions of 0.25mm max per side are not included.
5. Dimensions "D" and "E1" are measured at Datum Plane "H".
6. This replaces existing drawing # MDP0043 MSOP 8L.

Rev. F 2/07

**NOTES:**

1. Dimension "D" does not include mold flash, protrusions or gate burrs. Mold flash, protrusions or gate burrs shall not exceed 0.15mm per side.
2. Dimension "E1" does not include interlead flash or protrusions. Interlead flash and protrusions shall not exceed 0.25mm per side.
3. Dimensions "D" and "E1" are measured at dAtum Plane H.
4. Dimensioning and tolerancing per ASME Y14.5M-1994.

Rev. M 2/07

**NOTES:**

1. Plastic or metal protrusions of 0.006" maximum per side are not included.
2. Plastic interlead protrusions of 0.010" maximum per side are not included.
3. Dimensions "D" and "E1" are measured at Datum Plane "H".
4. Dimensioning and tolerancing per ASME Y14.5M-1994

# Package Outline Drawing

## M8.15E

8 LEAD NARROW BODY SMALL OUTLINE PLASTIC PACKAGE

Rev 0, 08/09

NOTES:

1. Dimensions are in millimeters.  
Dimensions in ( ) for Reference Only.
2. Dimensioning and tolerancing conform to AMSE Y14.5m-1994.
3. Unless otherwise specified, tolerance : Decimal  $\pm 0.05$
4. Dimension does not include interlead flash or protrusions.  
Interlead flash or protrusions shall not exceed 0.25mm per side.
5. The pin #1 identifier may be either a mold or mark feature.
6. Reference to JEDEC MS-012.
