Notes:  
 - All measurement are made at an ambient temperature of 25°C.  
 - Ipp applies to -40°C through +85°C temperature range.  
 - Ipp is repetitive surge rating and is guaranteed for the life of the product.  
 - SIDACtor components are bidirectional. All electrical parameters and surge rating apply to forward and reverse polarities.

**Description**

This new SIDACtor series thyristors are targeted for the tertiary or line driver side protection position for VDSL2+, ADSL2 applications and general I/O protection functions. This new low capacitance over voltage protection does not require a bias voltage and is sufficiently robust for the chip-side position behind the coupling transformer.

This SOT23-5 solution, with its flow-through design, minimizes PCB trace layout routing, while its four different stand-off voltage values offer compatibility with a variety of line drivers. Its low capacitance makes it compatible with ADSL2 and VDSL2, and the 30MHz bandplan of VDSL2+.

**Features & Benefits**

- Lower overshooting protection than clamping
- SOT23-5 surface mount package
- Low insertion loss
- Low capacitance
- Bidirectional transient voltage protection
- Robust surge rating
- Starts to switch in nanoseconds
- RoHS compliant and Halogen-Free
- Pb-free E3 means 2nd level interconnect is Pb-free and the terminal finish material is tin(Sn) (IPC/JEDEC J-STD-609A.01)

**SDP-xxx Application example**

The following schematics show alternate protection solutions for a typical DSL interface that connects to outside wiring. This surface mount SOT23-5 chip-side solution provides a minimum footprint solution appropriate for high density card designs. The SDP-xxx0T023 will protect the interface from lightning induced surges on the chip-side of the coupling transformer. This tertiary protector may be preceded by line-side protection such as the TeleLink over-current protector

and the SDP3500Q38CB overvoltage protector. GDTs may also be used on the line side of the coupling transformer. The flow-through design of the SOT23-5 package is illustrated below. If the inter winding capacitance of the transformer is allowing some common mode events to get coupled across, then the SDP-xxx0T023 can be placed in a three chip mode, as shown below for additional chip-side protection.
