## Silicon Bipolar RFIC Amplifiers

## Data Sheet

### Description

The MSA-2011 and MSA-2086 are high performance silicon bipolar RFIC amplifiers designed to be cascadable in  $50 \Omega$  systems. The stability factor of  $K > 1$  contributes to easy cascading in numerous narrow and broadband IF and RF commercial and industrial applications.

The MSA-2011 and -2086 are fabricated using a 10 GHz  $f_T$ , 25 GHz  $F_{MAX}$ , silicon bipolar RFIC process which utilizes nitride self-alignment, ion implantation, and gold metallization to achieve excellent uniformity, performance, and reliability. The use of an external bias resistor for temperature and current stability also allows bias flexibility.

Package options include the industry standard plastic surface mount SOT-143 package and the 85 mil surface mountable plastic microstripline package.
